Id	Body	Title

<p>I have a friend that has a little bit of a holiday coming up and they want ideas on what they should do during the holiday, I plan to suggest programming to them, what are the pros and cons that I need to mention?</p>

<p>I'll add to the list below as people reply, I apologise if I duplicate any entries.</p>

<p>Pros I have so far</p>

Minimal money requirement (they already have a computer)
Will help them to think in new ways
(Rob Cooper) Great challenge, every day really is a fresh challenge in some way, shape or form. Not many jobs can truly offer that.
(Rob Cooper) I like the way it makes me think.. I look at EVERYTHING more logically as my skills improve.. This helps with general living as well as programming.
(Rob Cooper) Money is/can be pretty good.
(Rob Cooper) Its a pretty portable trade.. With collaboration tech as it is, you can pretty much work anywhere in the world so long as you have an Internet connection.
(Rob Cooper) It's an exciting industry to work in, theres massive amounts of tech to work and play with!
(Quarrelsome) Jetpacks. Programming is Technology and the more time we spend with technology the closer we get to having Jetpacks. (Teifion: This is a really cool analogy!)
(Saj) Profitable way of Exercising Brain Muscles.
(Saj) It makes you look brilliant to some audience.
(Saj) Makes you tech-smart.
(Saj) Makes you eligible to the future world.
(Saj) It's easy, fun, not in a math way..
(kiwiBastard) If the person likes problem solving then programming is no better example.
(kiwiBastard) Brilliant sense of achivement when you can interact with something you have designed and coded
(kiwiBastard) Great way to meet chicks/chaps - erm, maybe not that one (Teifion: I dunno where you do programming but I want to come visit some time)
(epatel) Learning how to program is like learning spell casting at Hogwarts . The computer will be your servant forever...

<p>Cons I have so far</p>

<p>Our team (5-10 developers) plans to adopt Subversion for our .NET (Visual Studio) projects/solutions (VisualSVN Server, TortoiseSVN / VisualSVN).</p>

<p>What is the best way to organize a new repository tree? Is it okay to use one big repository or is it better to create different repositories for every solution / product line etc.?</p>

<p>Our projects can be categorized this way (example):</p>

Main Product Line

Main Web App

Library 1
Library 2
...

Windows Client
Another Windows Client
Windows Service

Tools

Tool A
Tool B

Product Line 2

Software 1
Software 2

Product Line 3

App 1
App 2

<p>Some of the work we do at my company is slowly edging towards a product family with different products in the same family and different flavours (or feature sets) in each product. I am looking for some product line engineering techniques that might help us. Web search leads to a lot of resources and a lot of different sources of information and differing methodologies. Before pluging into any of these in depth I thought it would be useful to get some practical advice from someone who has done something similar to this before. Anyone have any pointers/nuggets of wisdom in this area? I am particularly looking for better ways to do the following in a product line environment: </p>

configuration and build management
ease of development cycle
testing

305423		Product Line Engineering

<p>I am working on a software product line for online-tests automatic builds in coordination with my professor. He recommended for me "Pure Variants" as an open source tool which can be used as a plugin to Eclips. However, I am not really sure whether to go for it or search for other ones. So if you recommend this tool, then please tell me why you think so, or suggest for me another one you find better!
Thanks </p>

647830		Anyone recommends 'Pure Variants' for Software Pro

<p>I have to port a smaller windows forms application (product configurator) to an asp.net app which will be used on a large company's website, demand should be moderate because it's for a specialized product line. </p>

<p>I don't have access to a database and using XML is a requirement from their web developers.</p>

<p>There are roughly 30 different products with roughly 300 different possible configurations stored in the xml files, and linked questions / answers that lead to a product recommendation. Also some production options. The app is available in 6 languages.</p>

<p>How would you solve the 'data access' layer, if you could call it this way? I thought of reading / deserializing the xml files into their objects and store them in asp.net's cache if they're not there already and then read from the cache on subsequent requests. But that would mean all objects live in the memory all day and night.</p>

<p>Is that even necessary, or smart, performance wise? As I said before, the app is not that big, the xml files not that large. Could I just create some Repository class that reads the xml files whenever an object is requested (ie. 'Product Details', or 'Next question') and returns it that way, and drive memory consumption down?</p>

657477 xml parsing / querying performance question for asp.

<p>I am hoping that someone (or some people) could help us with a problem that we have wrangled with for a few days. How to organize our business objects given the attached diagram? </p>

<p>We are looking for any assistance (ideas about where to or how to search for the design pattern(s)/object model(s) we could use in order to solve this problem. Our situation is slightly more complex, but we have tried to simplify it best we could for the purposes of asking this question. </p>

<p>Some Details:
Some companies have product lines and some don't.
Each company has a list of contacts. If a company has at least one product line, some of those company contacts are ALSO associated with at least one product line.
A few of the contacts are references (business/personal) for other contacts.
Each company and each contact can have zero or more addresses.</p>

<p>Thank you for any assistance finding a more appropriate solution (My assumption is that we will need to use multiple models/patterns).</p>

<p><img src="https://farm4.static.flickr.com/3540/3480423086_deafb0e200.jpg" alt="Entity Diagram"></p>

<p>Larger view of diagram (flickr.com)</p>

<p>** (from the diagram) Our company has employees/internal application users who are included with contacts because they can also be references, etc.</p>

<p>We have a legacy linker that uses libc5, and due to several factors we only have the binary and not the source. Yes, version control would have saved us from our current problem... that is now in use for our full tool chain and product line, but this particular horse is long gone.</p>

<p>This linker works on linux kernel 2.6.24, but on 2.6.25 (and 2.6.26) it fails with the message </p>

<pre>
    Virtual memory exceeded in `new'
</pre>

<p>We had a similar problem with the corresponding legacy compiler, but with some stackoverflow.com answers and much research have discovered that the compiler problem was caused by the "brk randomization" in linux kernel 2.6.25. The workaround for that is to set a sysctl vars and a environment var:</p>

<pre>
    /proc/sys/kernel/randomize_va_space = 0 or 1
    setenv MALLOC_TOP_PAD_ 536870912
</pre>

<p>This, however, does not help the linker.</p>

<p>I have found from using "ldd" that the linker has more shared library dependencies (the compiler only had the libc.so.5):</p>

<pre>
    libg++.so.27 => /usr/lib/libg++.so.27 (0xb7eca000)
    libstdc++.so.27 => /usr/lib/libstdc++.so.27 (0xb7e99000)
    libm.so.5 => /lib/libm.so.5 (0xb7e90000)
    libc.so.5 => /lib/libc.so.5 (0xb7dd3000)
</pre>

<p>And I have read that I may have to install the libc5 version of libg++.so.27. I hesitate to do that since I dont know if that will override the latest libg++.so.27 and cause problems for non-libc5 apps.</p>

<p>So, do I find and install the libc5 version of libg++.so.27, or is there some better way to disable brk randomization, or is there another difference between kernel 2.6.24 and 2.6.25 that is causing the linker problem?</p>

<p>Say on my old site I have one level categories of products, with one category being "BMW Cars".. inside of that, I have some products : "328i" , "M3", "M5", "X5"... so basically it is a big mix of everything - cause in the beginning we didnt separate the product line into finer categories.</p>

<p>Now we are building a new site, and have a 2 level structure... now we have top level "BMW automobiles" and sub cats like "BMW sedans", "BMW sports cars" "BMW SUV's"..</p>

<p>Key question -> where do we rewrite the old "BMW Cars" category page ? do we point it to the top level "BMW automobiles"? That seems logical but: what happens in another example if most of the products in our current site fit into one of the new site's subcategories, but has a small percentage that don't truly belong:</p>

<p>Say our old BMW Cars had 90% sedans and 10% SUV's, would it be more appropriate to forward it to our new top level catch all "BMW automobiles", or is it ok to point it to sedans, even though some products don't belong (obviously SUV's)... </p>

<p>what if it is 80/20, or 95/5... what percent is the cut off or should we always point to the top level to be "safe"</p>

842071 How do you mod rewrite one level categories to two

<p>On SQL Server 2005, I have a complex multi-level allocation process which looks like this (pseudo-SQL):</p>

<pre><code>FOR EACH @LVL_NUM < @MAX_LVL:
INSERT INTO ALLOCS
SELECT 'OUT', *
FROM BALANCES(@LVL_NUM)
INNER JOIN ALLOCN_SUMRY(@LVL_NUM)

INSERT INTO ALLOCS
SELECT 'IN', *
FROM BALANCES(@LVL_NUM)
INNER JOIN ALLOCNS(@LVL_NUM)
INNER JOIN ALLOCN_SUMRY(@LVL_NUM)
</code></pre>

<p>Where <code>ALLOCS</code> is seeded with direct allocations and then <code>BALANCES(@LVL_NUM)</code> is based on <code>ALLOCS</code> at the <code>@LVL_NUM</code> (which might be some direct allocations plus some IN allocations from a previous level) and <code>ALOCNS(@LVL_NUM)</code> is based on <code>BALANCES(@LVL_NUM)</code> and <code>ALOCN_SUMRY(@LVL_NUM)</code> is simply based on <code>ALOCNS(@LVL_NUM)</code> - with a lot of configuration tables which indicate the drivers which drive the allocations out.</p>

<p>This is simplified, but there are actually four or five pairs like this within the loop because there are a variety of logics which are not possible to handle together (and some cases which are possible to handle together.)</p>

<p>The basic logic is to take the total amount in a particular cost center/product line/etc (i.e. the <code>BALANCES</code>) and then allocate it out to another cost center/product line/etc based on its share (i.e. the <code>ALLOCNS / ALLOCN_SUMRY</code> percentage share) of a particular metric.</p>

<p>With so much logic repeated in the <code>OUT</code> recordkeeping and the <code>IN</code>, and of course the <code>SUMRY</code> based on the <code>ALLOCN</code> detail, I ended up implementing using inline table value functions, which seem to perform fairly well (and they match the existing system's behaviour in the regression tests, which is a plus!). (The existing system is a monster C/C++/MFC/ODBC program that reads all the data into massive arrays and other data structures and is pretty atrociously written.)</p>

<p>I have the following function which is called for every line item produced. Does anyone have any ideas how to speed this up? </p>

```
<pre><code>private String getDetails(String doc){
    String table="";
    java.sql.ResultSet rs = qw.DBquery("select " +
        "id,LineType, QtyTotal, ManufacturerPartNumber, Description, UnitCost,UnitPrice " +
        "From DocumentItems  " +
        "where DocID="+doc+" order by linenumber " +
        "");
    table+= "&lt;table class=inner&gt;&lt;thead&gt;&lt;colgroup&gt;&lt;col id='col1'&gt;&lt;col
id='col2'&gt;&lt;col id='col3'&gt;&lt;col id='col4'&gt;&lt;col id='col5'&gt;&lt;/colgroup&gt;" +
            "&lt;tr class='enetBlue'&gt;&lt;th&gt;Qty&lt;/th&gt;&lt;th&gt;Part Num&lt;/th&gt;&lt;
th&gt;Description&lt;/th&gt;&lt;th&gt;Unit Cost&lt;/th&gt;&lt;th&gt;Unit Price&lt;/th&gt;&lt;
/tr&gt;&lt;/thead&gt;" +
            "&lt;tbody&gt;";
    try{
        int odd = 0;
        while(rs.next()){

            int lineType = rs.getInt("LineType");
            int qty = rs.getInt("QtyTotal");
            String part = rs.getString("ManufacturerPartNumber");
            String desc = rs.getString("Description");
            float cost = rs.getFloat("UnitCost");
            float price = rs.getFloat("UnitPrice");
            String id = rs.getString("id");

            String clas="";

           if (odd==0) odd=1; else odd=0;

           clas="red";
           if (lineType==2) clas="yellow";
           if (lineType==3) clas="yellow";
           if (lineType==4) clas="yellow";
           if (qty==0) clas="yellow";
           java.sql.ResultSet rs2 = mas.DBquery("select itemkey from timitem where itemid =
'"+part+"'");
           while (rs2.next())
           {
```

983390	Has anybody here implemented a software product line approach, as defined by the SEI? How do you manage changes? How do you test? What problems have you had to deal with? For years we've basically been trying to follow a product line approach, but I am constantly fighting Program Managers who don't want to pay for testing changes not strictly required for their program, and yet want free bug fixes. They also are very scared of changes happening to the code base that they don't need... not an unreasonable fear. This has culminated in my getting an action item at our last PDR to explain the product line approach and why I think we should follow it. I've found softwareproductlines.com, which has a few success stories, but not enough details on how to counter the potential pitfalls.	Pros and Cons of Product Line Software Development
1059047	I was looking at salesforce.com as a means for our marketing group to manage their contact information as well as manage their email marketing. I was told to use outlook instead...I'm unclear about Microsoft's CRM product line. What Microsoft tech/program are you folks using to extend Outlook into a an email marketing management tool, and if so do you like it compared to what else is out there? Thanks for your input.	Outlook Mailing List Distrubution Management

<p>I need to exclude a product line from a database so I do pline != prodctline but certain products in that product line I do not want to be excluded.
For instance:
here is simlplistic version of my database:</p>

<p>partname, pline, option (3 columns)</p>

<p>i want to exclude all results from a certain product line unless they have X option value. soo</p>

<p>part name, product line, option</p>

<p>widget1 10   null</p>

<p>widget2 10   option1</p>

<p>widget3 10   option5</p>

<p>widget4 10   option2</p>

<p>so i might want to exclude all of product line 10 unless it comes with option 1.</p>

<p>or </p>

<p>i might want to exclude all of product line 10 but unless it comes with option 1 and option 2. </p>

<p>Hope this helps</p>

<p>I'm not sure how to go about doing this in a query. Is there a sql clause that I'm not aware of?</p>

<p>I was trying to do it with where pline != 90 and option = 'option1' but that was not working. </p>

<p>Thanks</p>

1097950 mysql query excluding a set of data but includindg cer

<p>I'm working on a storefront application in PHP with MySQL. I'm currently storing my data in 4 tables: one for product lines, one for specific products within those product lines, one for product images, and one which specifies which images are linked to which specific products. Each specific product belongs to one product line, each product image can belong to several specific products, and each specific product can have several images. My tables look like this: </p>

<pre><code>ProductLines
   id, name, description, etc.
SpecificProducts
   productLineID
   id, color, size, etc.
ProductImageLinks
   specificProductID
   imageID
Images
   id, imageFileLocation, name, etc.
</code></pre>

<p>It's working fine this way, but it seems like it's not very efficient for retrieval purposes.</p>

<p>For example, I have a page that lists each product line along with a thumbnail of a randomly chosen image from that product line. To do that I have to first query the database for a list of all product lines, then perform a separate query for <i>each product line</i> to get all of the specific products that have associated images, pick one of those, and then query again to get the image.</p>

<p>Another possibility I considered would be to use one query to get all the product lines I'm looking at, a second query to get all the specific products for all of those product lines, a third query to get all of the image links which specify which images are linked to which specific products, and a fourth query to get all those images. I imagine this would be a bit faster because of the reduced number of queries, but it would leave a lot of work for PHP to do figuring out the connections between product lines and products and images, which could be just as slow.</p>

<p>So my question is, is there a better way to store this data? Or a better way to retrieve it based on the database I already have in place? Or is one of the two options I've identified really my best bet?</p>

<p>Edit: I'm not actually storing image files in the database. The image files are stored in the file system. My "Images" table in the database just stores the location of the image file along

<p>My company has a client that tracks prices for products from different companies at different locations. This information goes into a database.</p>

<p>These companies email the prices to our client each day, and of course the emails are all formatted differently. It is impossible to have any of the companies change their format - they will not do it.</p>

<p>Some look sort of like this:</p>

<pre>
    This is example text that could be many lines long...

    Location 1
    Product 1   Product 2   Product 3
    $20.99 $21.99 $33.79

    Location 2
    Product 1   Product 2   Product 3
    $24.99 $22.88 $35.59
</pre>

<p>Others look sort of like this:</p>

<pre>
    PRODUCT   PRICE   + / -
    ------------ -------- -------
    Location 1
    1   2007.30 +048.20
    2   2022.50 +048.20

    Maybe some multiline text here about a holiday or something...

    Location 2
    1   2017.30 +048.20
    2   2032.50 +048.20
</pre>

<p>Currently we have individual parsers written for each company's email format. But these formats change slightly pretty frequently. We can't count on the prices being on the same row or column each time. </p>

<p>Our company is migrating its entire product line from a C++ codebase to the .NET Framework. We have a very large codebase, and this migration is being done incrementally over the course of many years.</p>

<p>We would like to enjoy some of the benefits of pure managed code, such as Silverlight, but there are many legacy C++/x86 modules that will take time for us to port to .NET.</p>

<p>One solution would be for us to load these modules into a lightweight x86 emulator running in a small memory sandbox in the .NET Framework. This would allow us to call into legacy x86 DLL code while maintaining a pure managed application.</p>

<p>Does anyone know of such a project?</p>

<p>Sincerely,</p>

<p>Dan</p>

1411311 Lightweight x86 Emulator for .NET / Executing x86 co

<p>I'm trying to get a better handle on what it really means for a language to be "dynamic". I have quite a bit of experience with Lingo, which is the scripting language for the Adobe (formerly Macromedia) Director product line, and I'm just wondering if it would be considered a "dynamic language".</p>

<p>The way variables and lists are handled seems very "dynamic language"-ish to me.</p>

<p>With variables, you would just write <code>foo = 3</code> or <code>bar = "Hello World"
</code>. You don't declare a variable as an <code>int</code> or <code>string</code>--it figures that out as is goes.</p>

<p>With lists, you can just write something like <code>miscCollection = [3, "Hello World", #helloWorld, ["Embedded List", "Goes Here", 3], [#phrase: "Property List goes here", #value: 3]]
</code>. Would this not be similar to a <code>tuple</code>?</p>

<p>Are these features enough to qualify for "dynamic language" status?</p>

<p>Interestingly, I've been using C# a lot more and Director/Lingo a lot less, but with all the excitement over dynamic languages these days, I wonder if I'm actually going against the grain.
</p>

<p>EDIT</p>

<p>Regarding Mark Rushakoff answer, below, here's an attempt to analyze whether Lingo qualifies as "dynamic" using this <a href="http://en.wikipedia.
org/wiki/Dynamic_programming_language" rel="nofollow noreferrer">Wikipedia article:
</p>

<p><code>Eval</code> - Lingo has <code>do</code> and <code>value</code> keywords. <code>do</code> will execute an entire command, e.g., <code>do "foo = 23"</code> or <code>do "foo = sum(20, 3)"</code>. <code>value</code> attempts to convert a string into a numeric, but it is more than just a parsing operator--it can actually convert a string representation of a variable into its number, e.g., assuming <code>foo = 23</code>, the statement <code>value("foo")</code> will evaluate to 23.</p>
<p>Higher-Order Functions - If I'm understanding this right, this is basically what I would be called a "delegate" in C#. Lingo doesn't support this directly as far as I know, although you could create a type (called a "parent script") that has a function and pass an instance of the type.
</p>
<p>Closures - No support for this as far as I know.</p>

<p>My company uses an internally developed package to support internationalization/localization. However, it was developed some twenty years ago, and the libraries are restricted to one product line. I'm interested in where the state of the art stands. Is Unicode the base character set for all international efforts today? Do people still use gettext() and family? If using C++, should I be concentrating on the locale support in that language?</p>

<p>I've looked at the Wikipedia entry on Internationalization and Localization, which includes links to other sites and related topics. But there's a lot out there, and what I'd like is a source, especially a book, which serves as a good introduction to the topic on Linux/Unix in the current software scene. If the implementation uses C++, that's fine.</p>

<p>For example, years and years ago I read a book called Understanding Japanese Information Processing, by Ken Lunde, and much later, his revised book, CJKV Information Processing. Both were interesting, but of course focussed on Asian languages. Is there a book on the current art that is (spoken/written) language agnostic?</p>

1765119 What Is a Good Introduction and Tutorial on Internati

<p>I have a TabControl where the content of each TabItem is a master-details view. </p>

<p>For the master, I'm using a listbox whose <code>ItemsSource</code> is bound to a collection in my ViewModel. Selecting an item from the list displays that particular item's details in a grid off to the side.</p>

<p>When I switch to another tab and then back to the original tab, the listbox selection seems to be lost. </p>

<p>What can I do to maintain the listbox selections in each tab when the tab selection changes? </p>

<p>In normal use the end users will need to 'set up' the detail views the way they like for a particular situation, and then cycle through the tabs occasionally to check on each system (each tab provides details for machinery on a different product line). </p>

<p>The TabControl looks like this:</p>

<pre><code><TabControl
    ItemsSource="{Binding DiagCards}"
    ContentTemplate="{StaticResource DiagCardViewTemplate}"
    SelectedItem="{Binding SelectedDiagCard}" />
</code></pre>

<p>The View for each TabItem has a ListBox that looks like this:</p>

<pre><code><ListBox
   ItemsSource="{Binding DiagCard.DevicesDetected}"
   SelectedItem="{Binding SelectedDevice}"/>
</code></pre>

<p>The details are displayed in the TabItem using a ContentControl:</p>

<pre><code><ContentControl
   Content="{Binding SelectedDevice}"
   ContentTemplateSelector="{StaticResource SelectedDeviceTemplateSelector}"/>
</code></pre>

<p>I should note that a simple test using hard-coded TabItems and ListBoxes does seem to maintain the selection when the tab changes:</p>

<p>Right now the query below is retrieving more then one product record. How can I limit the results set to only retrieving the one record per product_ID? Multiple records will be returned from different products, but I only need one product line per product_id. This is MS SQL 2005
</p>

```
<pre><code> SELECT DISTINCT dbo.Products.Product_ID AS Expr1,
        CASE
                WHEN dbo.Products.thumbnail     IS NULL
                OR          dbo.Products.thumbnail = ''
                THEN dbo.Products.Smimage
                ELSE dbo.Products.thumbnail
        END AS image                                                  ,
        dbo.Products.ProductTitle                                       ,
        '&lt;img WIDTH="62" src="http://media.companyinc.
com/companyinc/SKUimages/small/' + dbo.Products.Smimage + '"&gt;' AS URLImage,
        dbo.INV_dropshippers_To_ProductOptions.sku
,
        dbo.Products.Discontinued                                       ,
        dbo.Products.CloseOut                                           ,
        dbo.Products.Special                                            ,
        dbo.Products.Active                                             ,
        dbo.Products.location_id                                        ,
        dbo.INV_dropshippers_To_ProductOptions.dropshipper_id
,
        dbo.Products.season                                             ,
        dbo.Products.thumbnail                                          ,
        dbo.Products.Smimage                                            ,
        dbo.Products.CustomField2                                       ,
        dbo.Products.pt_type                                            ,
        dbo.Products.PartNumber                                         ,
        dbo.Products.RetailPrice AS Price                               ,
        dbo.skupurchasedreport.Product_Id                                 ,
        dbo.skupurchasedreport.totalprice_date1
,
        dbo.skupurchasedreport.totalprice_date2
,
        dbo.skupurchasedreport.qtypurchased_date1
,
        dbo.skupurchasedreport.qtypurchased_date2
,
        dbo.skupurchasedreport.totalprice_date3
```

<p>I've recently come in contact with a proprietary descendant of UniVerse. Does anyone know where I can get a good tutorial or brush up on the syntactic quirks of its more popular parent? I can't figure out how to even get a table listing. Navigating my way around is difficult, and I don't see any man pages.</p>

<h1>UPDATED with the official Rocket Software links:</h1>

<p>Special attention needs to be given to <code>SQL Reference</code>, <code>SQL Administration for DBAs</code>, and <code>User Reference</code>. There is also a link at the bottom of both of these pages to a zip with all of the docs. There is also a demo on Rocket Software (personal information required) for Universe 10.3, but it only works with RHEL. And, even though it is statically linked it segfaults for me using Ubuntu 8.10.</p>

<p>These links are official from Rocket Software (current owner of Uni* line of products)</p>

UniVerse 10.3 Demo latest

Guide to installing it on Ubuntu 9.10

UniVerse 10.3 Documentation latest
Supporting whitepapers and theory
Manual index page Servers & Tools

<p>Here is one that predates Rocket Software's aquisition of the product line:</p>

Old IBM ftp repository of U2 stuff
IBM ZIP of 10.1 Documentation

<p>I am designing a database from scratch from manufacturing products. The key design is as follows:
(Currently I am working on MS Access 2007 but my final implementation is SQL Server i.e. SQL Server 2008 being the latest version. Also I would be using only Express edition at this movement. The application will involve a .NET storefront interfaced with this database)</p>

<p>[1].Each product may be divided into various categories.
(I have decided to assume that if a product does not have a category, I will forcefully insert a category called by the name 'BLANK', rather than calling it NULL, in this way I can add categories to the product in future if required)
1 Product can have many categories.
1 Category can belong to more than 1 products.
Categories may also be changed to belong to a different product in future.</p>

<p>[2].Each product category may be divided into various subcategories.
(Again, I have decided to assume that if a product category does not have a subcategory, I will forcefully insert a subcategory called by the name 'BLANK', rather than calling it NULL, in this way I can add subcategories to a product category in future if required)
1 Product Category can have many subcategories.
1 SubCategory can belong to more than 1 product Category.
SubCategories may also be changed to belong to a different product category in future.</p>

<p>[3].Each product will have different number of attributes.
Each attribute will have different attribute values
Values of some attributes will be dependent on the values of other attributes
Values of some attributes which may not be directly dependent on the value of other attributes will still be indirectly dependent based on the availability of the values of other attributes.</p>

<p>The design I have thereby developed is as follows:</p>

<p>0000_Product_Line
ProductLineID(PK)
ProductLineName</p>

<p>0001_Product_Line_Category
ProductLineCategoryID(PK)
ProductLineCategoryName</p>

<p>0002_Product_Line_Category_Association
[PK]ProductLineID(FK Referring ProductLineID from table 0000_Product_Line)
[PK]ProductLineCategoryID(FK Referring ProductLineCategoryID from table

<p>I have a php data migration script that <code>serializes</code> an array of text. Somehow, and this is not in my codebase, but the script is inserting \\\\\\\r\\\\\\\n into the string. Here is an example of what the output is like:</p>

<p>Product Line: [56313] LEGO Batman Screenshot\\\\\\\\r\\\\\\\\n[5
6384] LEGO Batman Screenshot[56446] LEGO Batman Screenshot[56460] LEGO Batman: T</p>

<p>There are no line breaks in between the different products (as you can see, there are two products being shown there - that's two iterations). When the second product gets appended to the first, the \\\\\\r\\\\\\n gets prepended. This question is fairly difficult to explain, and I don't really think that any code will help explain it. What is this and how do I get rid of it? I'm on a windows platform.</p>

2058167 PHP Inserting newlines automatically

<p>I am redeveloping the front end and database for a medium size products database so that it can support categories/subcategories, product lines, manufacturers, supported software and product attributes. Right now there is only a products table. There will be pages for products by line, by category/subcategory, by manufacturer, by supported software (optional). Each page will have additional filtering based on the other classifications.</p>

<p>Categories/Subcategories (multi level)
Products and product lines can be assigned to multiple category trees. Up to 5 levels deep should be supported.</p>

<p>Product lines (single level)
Groups of products. Product can only be in single product line.</p>

<p>Manufacturers (single level)
Products and product lines can be assigned to single manufacturer.</p>

<p>Supported software (single level)
Certain products only work with one or more softwares, so a product/line can be assigned to none, one or more softwares.</p>

<p>Attribues (type / options - could be treated so each type is a category and items are children)
Products and product lines can be assigned attributes (eg - color > red / blue / green).
Attributes should be able to be assigned to one or more categories.</p>

<p>Since all these items are basically types of subcategories, do I put them all together in a master table OR split them into separate tables for each one?</p>

<p>Master table idea:</p>

<p>ClassificationTypes (product line, category/sub, manufacturer, software, attribute would all be types)

-TypeID

-Name</p>

<p>Classifications

-ClassID

-TypeID

-ParentClassID

-Name</p>

ClassificationProductAssociations

<p>I'm planning to set up an online store for a friend, unfortunately his product line introduces some demands most out-of-the-box solutions don't fit. I'm hoping somebody here has had some experiences with an open source package that they can recommend.</p>

<p>The specific issue is that the products are going to number in the hundreds of thousands. Since the type of products have a lot of clearly defined specifics, searching and sorting can be (and needs to be) very granular and efficient. For this reason, the primary requirement is that I replace the product and search-related parts of the app, but only those parts. I'm hoping that there's an ecommerce solution with the product segment abstracted so that I can change the database tables, product display code, search code, and create the obvious code to interact with the database.</p>

<p>I'd prefer something that's built on ASP.Net MVC since it'll play nicely with some extensions I am considering for the future but I'd consider WebForms. I'd also like it to be something that functions on GoDaddy's Hosting, though I'm not optimistic, I just got the account before I discovered how terrible of an ASP.Net web host they are. And finally I need something that's reasonably mature as I don't have time up front to deal with a system that hasn't been tested, and the majority of issues worked through already.</p>

<p>I'd appreciate any ideas.</p>

<p>Edit: I've done a bit of searching already and I've found several (at least 8) MVC projects, but I haven't had time to examine them properly for the needs listed above. I also can't be sure which ones have matured from real world application...So I'm mostly looking for advice either based on a familiarity with using the app or at least reading enough about it that you would feel it's good to recommend.</p>

<p>Thanks Everybody!</p>

2126226 Need an ASP.Net eCommerce app that I can make spe

<p>Over a year ago, I remember watching one of DevExpress evangelists previewing or at least promoting rich Javascript refactoring (beyond just limited intellisense) within the Visual Studio shell, I recall part of CodeRush/DevExpress product line. I was excited. </p>

<p>On checking today (lmgtfy) I can find only very very limited reference to it, just one small italtic line about beta in product description, no videos, no blog posts, no community buzz. Was it dropped? Vapourware? Poor implementation that they dont even promote it?</p>

<p>With Javascript arguably the most popular programming language ever and with a VM for it on practically every machine in last 10 years, why is editor support so poor? (Compared with those for Java and C#)? You see the likes of ScottGu bragging we now have jQuery intellisense but compare this to richness of C# support in the IDE it is a joke. </p>

<p>Someone once said since there are many style of writing Javascript a rich IDE (beyond intellisense) with refactoring support is difficult, but if several engines can interpret/compile JS with same result surely it should be hard to analysis it to support stuff like rename variable, extract method, move to another namespace (or JS minic of it), etc.. Am I wrong?</p>

2432256 How far did DevExpress get with Javascript refactorin

<p>I have entities similar to:</p>

<pre><code>ProductLine: id, name
ProductLineContents: content_id, product_line_id
Content: id, text, updated_time
</code></pre>

<p>What I'd like to do is: for each product line, get the latest content (so if theres two content entries associated to one product line, the latest updated_time is rturned, and if one content item is associated to two product lines, it is returned twice). Something similar to:</p>

<pre><code>select content.* from productline
inner join productlinecontents
inner join content;
</code></pre>

<p>However I can't seem to figure out how to have Hibernate Criteria return a different entity than the original one it was created with. So if I wanted to start the criteria at the product line with <code>createCriteria(ProductLine.class)</code> along with the proper joins, then it only returns <code>ProductLine</code> objects, but I need <code>Content</code> objects.</p>

<p>What's the best way to accomplish this?</p>

<p>The actual data model is much more complex and can't be modified</p>

2589922 Hibernate Criteria: Return different entity type than r

<p>I'm working on a regional ecommerce website (ie. usa, uk, china) that offers a unique product line for each country. The site's URLs are currently in english only. Should these URLs be translated into the region's language? Are site URLs usually translated on regional sites?</p>

<p>Example URLs:
http://domain.com/products
http://domain.com/collection/a_product_line
http://domain.com/styles
http://domain.com/press_room </p>

2866615 i18n - Should the page URIs be translated on a region

<p>I work for a small E-Commerce shop and we are looking for a process that will handle resizing our product images dynamically. Currently our designers take high resolution photos, either provided by the manufactures or created in house, and alter them to fit various pages on our site. The designers are constantly resizing, cropping, altering compression levels, etc., of each product photo to fit the needs of the business. Being that our product line is updated frequently, this becomes a monotonous task.</p>

<p>Abobe Scene7 does exactly what we are looking to do and the images are served up from a CDN. Unfortunately we found it to be too expensive.</p>

<p>I'm curious to learn how others handle this process at their organizations. Does anyone know of any good 3rd party tools or other SAAS providers that can handle performing some basic image manipulation and serving them on the fly?</p>

2894247 Looking for a good Dynamic Imaging Solution

<p>I have been reading a lot about how flash development/design had died, and as jQuery and in the near future html5 comes out, will this start to push Adobe/Coldfusion away from flash towards less product linking?</p>

<p>I mean, I love coldfusion, and want that to continue to grow, however, if Adobe only bought Coldfusion from Macromedia, so they can bundle flash and coldfusion together, does the death of flash mean the death of coldfusion?</p>

<p>http://topnews.us/content/221385-jobs-says-adobes-flash-waning-and-had-its-day</p>

<p>http://aext.net/2010/03/javascript-jquery-killing-flash-tutorial-jquery-plugin/</p>

<p>I really don't mind if Flash dies, I do mind greatly if coldfusion does.</p>

<p>Is the success of Flash linked to Coldfusion? If so, why? or why not?</p>

<p>The purpose of this isn't to start some war about flash pro's and con's. I was only worried that Adobe would cause problems for Coldfusion, if flash had some market/financial problems. </p>

<p>That was my main concern...</p>

<p>And no I am not anti-flash...</p>

<p>But my financial sanity depends on Coldfusion being a success, so that is why I stated my question. Because I WANT EVERYONE ELSE'S OPINION OF THIS SITUATION.</p>

<p>Thank You.</p>

2969283 Is jQuery forcing Adobe ColdFusion to abandon the de

<p>I'm working with shape files in GeoDjango. Right now I'm trying to write a test for code that loads in a shape file and saves it to a database. The shape file currently has a feature count of 64,118. I'd like to reduce this to a handful so the test can quickly load it and confirm everything is right.</p>

<p>Since shape files aren't in a text format, is there a free application or library I can use to pluck out a handful of features and save them to a new file?</p>

<p>I should mention I don't have a license nor access to any of the ESRI product line.</p>

3016682 Split or save a subset of a ESRI Shape SHP file to a nev

<p>Here is the problem I am having.
I have a database with over 100 records in it.
I am paging through the data to get 9 results at a time.
When I added a check to see if items are active, it caused the results to start doubling up.</p>

<p>A little background:
"Product" is the actual product line
"ProductSkus" are the actual products that exist in the product line
When there is more then 1 ProductSku within Product, it causes a duplicate entry to be returned.</p>

<p>See the NHibernate Query below:</p>

```
<pre><code>result = this.Session.CreateCriteria&lt;Model.Product&gt;()
            .Add(Expression.Eq("IsActive", true))
            .AddOrder(new Order("Name", true))
            .SetFirstResult(indexNumber).SetMaxResults(maxNumber)

            // This part of the query duplicates the products
            .CreateAlias("ProductSkus", "ProdSkus", JoinType.InnerJoin)
            .Add(Expression.Eq("ProdSkus.IsActive", true))

            .CreateAlias("ProductToSubcategory", "ProdToSubcat")
            .CreateAlias("ProdToSubcat.ProductSubcategory", "ProdSubcat")
            .Add(Expression.Eq("ProdSubcat.ID", subCatId))

            // This part takes out the duplicate products - Removes too many items...
            // Turns out that with .SetFirstResult(indexNumber).SetMaxResults(maxNumber)
            // it gets 9 records back then the duplicates are removed.
            // Example:
            //     Total Records over 100
            //     Max = 9
            //     4 Duplicates removed
            //     Yields 5 records when there should be 9
            // Why???  This line is ran in NHibernate on the data after it has been extracted from
the SQL server.
            .SetResultTransformer(new NHibernate.Transform.
DistinctRootEntityResultTransformer())

            .List&lt;Model.Product&gt;();
</code></pre>
```

<p>We have tons of products on our site. The vendors often raise the prices of their product line. If it is something easy like +10% we can easily make this change in the data base. But if the prices are changing chaotically; some up, some down with no common denominator. It can be a hassle keeping track that all the products pricing are up to date with the vendor.</p>

<p>So I was wondering if there is a common practice for this?</p>

3335371 Is there a common practice for updating product prici

<p>What are web-based databases?</p>

<p>I have heart this term a couple times.
Is it some special database structure or product line name?</p>

<p>Please, give me two words or more for more details. </p>

3467098 What are web-based databases?

<p>Let's say we are developing an E-Commerce Web application for a small to medium sized business. Let's further assume that the business is likely to scale over time. In other words, the product line will typically grow.</p>

<p>Up to now I have developed n-tier solutions using ADO.NET and stored procedures with the help of the SqlHelper class. For bigger applications I have used Enterprise Library (2.0).</p>

<p>I would like to move towards an ORM-based approach and am starting to learn LINQ as well as making the switch from ASP.NET Web Forms to ASP.NET MVC. I do not want to go with LINQ-to-SQL. The question is not whether an ORM is required but if the Entity Framework ORM is overkill for such a project. I don't mind a learning curve if it is warranted for the task in hand.</p>

<p>As regards "overkill", I would like to know if:</p>

EF is faster than someone with the correct skills coding queries manually
EF leads to unnecessary code bloat
EF unnecessarily shields devs from code-level details of their queries
LINQ-to-Entities is suited for projects of this size

<p>In fact, if anyone thinks that an ORM is overkill for such project I'd like to hear reasons why.
</p>

3743496 Is Entity Framework Overkill for Web Applications?

<p>Does it make sense to focus on Domain Specifics Languages (DSL) development following a Software Product Line approach? </p>

<p>Does anyone know any other approach to create and maintain several related Domain Specifics Languages at the same time? Note that to support a custom language, requires support multiple tools, from parser, compilers, interpreters, to current state of art IDE, etc.</p>

3753417 Software Product Lines (SPL) for Domain Specific Lang

<p>I'm using jQuery's $.ajax method to send and retrieve data to a REST service. Some of the URL's I'm providing to the $.ajax method requires spaces and other special characters to be encoded.</p>

<p>The problem lies with Chrome, Safari (Webkit) and Internet Explorer browsers. Firefox POST's to a URL which is encoded but the other browsers POST to a URL which isn't encoded.
</p>

<p>As an example:</p>

<pre><code>$.ajax ({
 url: "http://localhost:8080/rest/123/Product Line A/[Product Type B]",
 type: "POST",
 dataType: "json",
 data: { ... },
 success: function(...){},
 error: function(...){}
})
</code></pre>

<p>Firefox POSTS the URL in the following format:</p>

<pre><code>http://localhost:8080/rest/123/Product%20Line%20A/%5BProduct%20Type%20B%5D
</code></pre>

<p>Chrome, Safari and IE POSTS the URL in the following format:</p>

<pre><code>http://localhost:8080/rest/123/Product Line A/[Product Type B]
</code></pre>

<p>The REST services accepts the encoded (Firefox) format - is there a way I can make this consistent across all browsers?</p>

<p>Thanks in advance!</p>

<p>I have an Excel file that has several tables of data with long conditional formulas that combine to ultimately generate a quote for our customers. Our product line has infinite product permutations. Presently, we distribute an Excel file internally that allows employees to select specs from drop down lists, fill in and/or select some other factors that define the part. The sheet then calculates pricing and populates a form for printing/emailing/faxing. The data/calculations in the Excel file show actual costs and markup, so the file can not be sent to customers.</p>

<p>I have an idea that could populate one table with all the data necessary to generate the quote. The table would have cost and markup combined, so the customers could see the table (although I would like to keep it hidden). I wanted to distribute a PDF with the data securely hidden, drop down selectors, text and check boxes that would allow a customer to have a price sheet. Can a PDF file do this? If so, what language/tools should I use/consider?? Is there a better way?</p>

5135328 repackage Excel file price catalog worksheet for distri

<p>EDIT 4/18:
I want to thank everyone who has answered so far. As a test I have set up a new job which has just one step in it, </p>

<pre><code>EXECUTE p_CallLog_GetAbandonedCallsForCallList
</code></pre>

<p>This procedure itself runs just fine and reports no errors or warnings but will not run when executed as part of a job. The error I receive when running the job is:</p>

<pre><code>Executed as user: NT AUTHORITY\SYSTEM. OLE DB provider 'SQLOLEDB' reported an error. [SQLSTATE 42000] (Error 7399)   [SQLSTATE 01000] (Error 7312) OLE DB error trace [OLE/DB Provider 'SQLOLEDB' IDBInitialize::Initialize returned 0x80004005:   ].
[SQLSTATE 01000] (Error 7300). The step failed.
</code></pre>

<p>I have tried changing the run as user selection and every other selection I try results in an error of: </p>

<pre><code>Executed as user: Db2WebCal. Remote access not allowed for Windows NT user activated
by SETUSER. [SQLSTATE 42000] (Error 7410). The step failed.
</code></pre>

<p>All of the users I have tried do have a local login setup on the linked server.</p>

<p>The p_CallLog_GetAbandonedCallsForCallList procedure is as follows:</p>

<pre><code>CREATE   PROCEDURE [dbo].[p_CallLog_GetAbandonedCallsForCallList]

AS
BEGIN
  DECLARE @SrvrName varchar(255)
  DECLARE @HoursOld int --only get abandoned call that are fresher than @HoursOld

  SET @HoursOld = 2 /*was normal default   */
  SET @SrvrName = CAST(ServerProperty('MachineName') as varchar(255))

  CREATE TABLE #tmpAbandonedCalls
  (
    [ID] INT NULL,
    StartTime DateTime NULL,

<p>Microsoft has augmented the existing Simplex (Linear) and Gradient (Non-linear) solver engines of the standard Solver Add-In by an Evolutionary solver engine aiming at non-smooth discontinuous problems where global optimal solutions are generally hard (or most of the time even impossible) to find with the other engines. In fact, it is one of the solvers that was previously only available through Frontline's Premium Solver product line, so I think it can be considered a generous addition to the standard solver that ships with Excel.</p>

<p>I haven't heard a lot about people using this new engine and guess that most solver users haven't noticed this recent addition by Microsoft. I become aware of it here: http://office.microsoft.com/en-us/excel-help/what-s-new-in-excel-2010-HA010369709.aspx</p>

<p>I would therefore like to hear about your opinions and experiences with it, also with respect to reasonable settings as it seems to take a lot more time to converge than the other methods.
</p>

5688527 Opinions on and Experiences with Excel 2010's Evolut

<p>I'm playing with Tibco Randezvous, Tibco Designer + Tibco Business works for three days. This is my very first experience with this product line. I read several documentations to installed products but I'm still confused. </p>

What are ActiveEnterprise adapters and ActiveEnterprise Schemas? When and why to use them?
What is difference between using Tibco Randezvous Transport directly and ActiveEnterprise adapter over Tibco Randezvous? I only found that messages send through adapter have more complicated structure defined by AESchema.
Is it possible to use XSD schemes to define messages send by Tibco Randezvous transport or ActiveEnterprise adapters?
Is there anything like WSDL document to describe what messages the service expects / provide?
How to write client for a service using ActiveEnterprise adapters and AESchemas? (better how to write such program in .NET!). I just found only Tibco Adapter SDK which looks like the only option to work with AESchemas. For direct usage of Tibco Randezvous in .NET I found TIBCO.Randezvous library which works pretty good but it doesn't have support for AESchemas (or I missed it).

<p>Perhaps my questions are stupid because I don't grasp basics. </p>

5879902 | I'm looking for basic explanations from Tibco world

<p>I am working with taxonomies and nodes and I want to show them in a view.</p>

<p>My taxonomies are:</p>

<p>Product Category
- Product Line
-- Product
--- Features (Node)</p>

<p>I want to show this tree in a view but I can not get a good result.</p>

<p>For example I have:</p>

<p>Product category (phones)
- Product line (phone a)
-- Product (phone 104)
- Product line (phone b)
-- Product (phone 202)
- Product line (phone a)
-- Product (phone 124)
- Product line (phone b)
-- Product (phone 242)</p>

<p>And I want this result:</p>

<blockquote>
  <p>phones
  phone a
  phone 104
  phone 124
  phone b
  phone 202
  phone 242</p>
</blockquote>

<p>Is this possible?</p>

<p>Amazon recently announced support for Oracle in their RDS product line:
http://aws.amazon.com/rds/oracle/</p>

<p>I was wondering if anyone has used this, or if there would be a compelling reason to migrate my data from MySQL to Oracle. I don't run a super-massive data installation, and previously, the cost / hassle of getting an Oracle license blocked me from evaluating the product. With RDS, I guess it just becomes a pure economic issue - 16c / hr vs 11c for small, or 3.40 / hr vs 2.60 for 4xl. That's roughly a 30-50% premium.</p>

<p>Obviously, the cost would be a bit higher, and clearly, Oracle is the more "mature" product. But what considerations should I have? What key things would drive me to switch? How should I structure my evaluation / decision?</p>

<p>Is the engine more efficient? Could I get away with a smaller instance and save money overall?</p>

<p>Are there killer features in the product that make building apps faster / easier to manage? Could it save me time in some way to justify the price?</p>

<p>Does it make sense for a small database, or is Oracle only important for scaling up?</p>

<p>I'm in the "evaluation" phase and just trying to get my head around a product that I previously had little exposure to. Any input / perspective would be appreciated.</p>

6181295 Benefits of migrating from MySQL to Oracle for Amaz

<p>I have a form where fields get added via JavaScript. This is fairly easy to store without a bunch of extra JS code (for deleting and reordering) by using arrayed names for fields.</p>

<pre><code><input type="text" name="product[]" />
</code></pre>

<p>The problem comes when I need a multi-dimensional arrayed list of form data.</p>

<pre><code>order
 request_date
 product[]
 quantity[]
  warehouse1
  warehouse2
  etc...
</code></pre>

<p>Basically, each order has the order data, multiple products, and each product line item can be pulled from one or more warehouses. If the line item's order quantity is 100, and the first choice warehouse only has 50 units, they will need to select a secondary warehouse to get the second 50 units from...</p>

<p>I am trying to get this all onto one page possibly with JS popups to select between the different warehouses.</p>

<p>The problem is when I try to think of a good way to send this info to the server.</p>

<p>I would like to use the arrayed line item info, but cannot figure out how to send the multiple warehouses per line item back to the server. Should I just do something like comma separated values in a hidden field (populated by the JS warehouse selection popup)? Is there a better way? Any suggestions appreciated. Thanks.</p>

<p>If it matters, the backend is PHP.</p>

6259033 How to to store multi-dimensional form data?

<p>To get the core question out of the way first: has anyone used the Ektron content APIs and can comment on using them to get Ektron CMS content instead of using native Ektron controls? I'd like to use these APIs in an ASP.NET MVC site.</p>

<p>Now the background: we have a client with an existing site that is a fusion of Ektron (for basic content) and a custom database/codebase for other pieces of functionality (product data, ecommerce, etc). We need to build what amounts to a microsite for a specific product line, with the following requirements:</p>

Drive as much basic content (copy) as possible from the Ektron CMS
Most other content would come from the custom database
Ecommerce functionality should integrate with the main site's cart (the cart is custom-built and can be extended if necessary)
Login status may need to be shared (I know there is already an SO question that addresses this piece)

<p>I'd rather not struggle with WebForms and attempting to style Ektron controls, so I would like to recommend that we build the subsite as a standalone MVC application. Are the Ektron content APIs robust enough to support such an approach, or would this route just lead to tears and broken dreams?</p>

<p>Any insight is appreciated. Thanks!</p>

```

<p>I have three tables, <code>machines</code> holding vending machines, <code>products</code> holding all possible products, and <code>machines_products</code> which is the intersection of the two, giving how many of each product line is stocked in a particular machine. If a product is not stocked in a machine, there is no corresponding row in the third table.</p>

```
<pre><code>DESCRIBE machines_products;
+------------+------------------+------+-----+---------+-------+
| Field      | Type             | Null | Key | Default | Extra |
+------------+------------------+------+-----+---------+-------+
| machine_id | int(10) unsigned | NO   | PRI | 0       |       |
| product_id | int(10) unsigned | NO   | PRI | 0       |       |
| quantity   | int(10) unsigned | NO   |     | 0       |       |
+------------+------------------+------+-----+---------+-------+
</code></pre>
```

<p>Each product has a category (think chocolate bars vs. drinks bottles) and a machine knows what category of products it can vend. I want a result table of all products for the category, with a quantity for a specific machine. I have got as far as this:</p>

```
<pre><code>SELECT products.*, SUM(quantity) qty
FROM products
LEFT JOIN machines_products USING (product_id)
WHERE machine_id=m AND category_id=c
GROUP BY product_id;
</code></pre>
```

<p>The problem is that this filters out all rows where there is no quantity, whereas what I want is all rows from the left table, and NULL/0 in the <code>qty</code> column if there are no corresponding rows in the right-hand table.</p>

<p>BTW: this is not a homework question! I am 30 and sitting in my office :o)</p>

6609059

Forcing all rows from first table of a join

<p>I have the following LINQ to SQL EF classes:</p>

<p><img src="https://i.stack.imgur.com/IyjJh.jpg" alt="LINQtoSQL EF class diagram"></p>

<p>with the foreign key relationship on SessionId (primary table WebinarSession).</p>

<p>I would like, by using lambdas to select all the WebinarSession rows that concern a specific product line. </p>

<p>I put as example this code that of course DOES NOT WORK(it would owrk with Single inseatd of Where but it is not applicable because I have mulitple instances matching the condition):</p>

<pre><code>SessionId = _webinarRecordingsDB.WebinarSessions.Where(m => m.SessionId == m.SessionSubjects.Where(n => n.ProductLineName == productLine).SessionId);
</code></pre>

<p>Where _webinarRecordingsDB is the EF object mapping the SQL Database.</p>

<p>Does anybody know how to fulfill this task? Thanks</p>

6764013

Query a table by using foreign key navigation propert

<p>I am using Team Foundation Server (TFS) 2008, and am preparing to merge several TFS projects together, and I'd like to do this in the best way possible. All of these projects are within a single TFS instance.</p>

<p>I merging projects because the product line that is contained in all of the projects is small and is worked on by a single, small team, and so the projects themselves are simply unnecessary. Thus, I am trying to simplify our structure by merging the projects together. What this amounts to, I think, is a need to move the files from all projects into just one of the projects. But, I want to do this without affecting file history, etc.</p>

<p>I have tried researching this, and have found the following resources:</p>

Moving files from one Team Foundation Project to Another
Moving files between projects in Solution Explorer removes source
control history, breaking merge capabilities

<p>The second resource, a Microsoft knowledge base article, actually looks pretty useful. But, before I dive into this, I am just wondering what advice and/or warnings the SO community might offer? I am just hoping to go into this with my "eyes wide open."</p>

6876199 Team Foundation Server 2008: How to move files fro

<p>I have a table connected to another table through foreign key;</p>

First Table is the brand; it has a brand_id and brand_name fields
Second Table is the Product Line; it has a Line_id and line_name fields
Third Table is the Lines Offered; it has a id, Brand (which is a foreign key from the first table), and Line_name (which is a foreign key from the second table.

<p>If i will look into the third table on mysql the fields contains the id numbers of the foreign keys.</p>

<p>My question is this, is it possible that the stored value will be the name itself and not the ID? or Is it possible to add a field on my third table named it as Brand_name which is a VARCHAR that will display the exact brand name from the first table. Example the values of my third table would be '1','3','The Brand Name of brand with id no. 3','25'; - If yes i dont have any idea how to do this.</p>

7020520 Manipulating Foreign Keys output in MYSQL

<p>I am trying to build a simple contact editor application in Backbone.js and I have run into a bit of an issue that I don't know how to solve because I'm not familiar with Backbone.js yet.
</p>

<p>I have a Model <code>Contact</code> and that item has a field
<code>ProductLineID</code> (each Contact has a Product Line that it is associated with). In displaying the editor for this Contact I would like to display a dropdown list with the possible ProductLine options and have it preset to the current value. How would I do that in Backbone.
js?</p>

<p>I know how to do it in knockout.js with data-binding:</p>

<pre class="lang-xml prettyprint-override"><code><select id="ProductLineID" name="
ProductLineID"
data-bind="options: productLineOptions,
optionsValue: 'ID',
optionsText: 'Name',
value: ProductLineID,
optionsCaption: 'All'">
</select>
</code></pre>

<p>In this example productLineOptions is a JSON object that is already preloaded on the page.
</p>

<p>That would accomplish precisely what I want, but I don't know how to do the equivalent in Backbone.js.</p>

<p>I can provide more code from my actual example, but this seems like it's a bit of a trivial example and does not require specific code.</p>

7044227 How can I display a select list (dropdown) for a Mode

<p>We are implementing an enterprise financial Web application software. We're using spring, hibernate, oracle(DB), JSF. The requirements are changing over maintenance phase of software and we must have multiple version of some entities(also managers, forms, ... classes) at the same time because of compatibility of previous version of software. This changes of classes include : Add/Remove fiels, Change fields, Add/Remove Class, ... In general this problem is running multiple version of software at the same time. Please help me to find a solution for this problem.</p>

<h3>Clarification:</h3>

<p>This problem is similar with "variability in time" in software product line (See elsner_vamos2010 for more information). This means that we may have multiple version of one class at the same time and we must get class with (or date) parameter. In each date one version of class must be used Because of compatibility with state of program on that date. We solve this problem on Bean class with XML file and get version of class with date. So, The program knows what bean must be run for this state of program (date of other entities).</p>

<p>But we can't solve it for other object types in spring such as entity, jsp, form?</p>

7498823 How to manage multiple version of classes at the sam

<p>I have two tables:</p>

```
<pre><code>class Product(models.Model):
    code = models.ForeignKey(Product)
    regularprice = models.DecimalField (max_digits=8, decimal_places=2)

class Override(models.Model):
    productcode = models.ForeignKey(Product)
    specialprice = models.DecimalField (max_digits=8, decimal_places=2)

Data Example
============
Product
Code    RegularPrice
C101       1.25
C102       2.50
C103       3.00

Override
ProductCode SpecialPrice
C102       1.50
</code></pre>
```

<p>I want to do equivalent of a left outer join. The result set I want to achieve would be:</p>

```
<pre><code>Code    RegularPrice     SpecialPrice
C101       1.25       NULL
C102       2.50        1.50
C103       3.00        NULL
</code></pre>
```

<p>How would I do this?</p>

<hr>

<p>EDIT: I am trying to achieve a base price list, with optional override values. The base prices are generated, with any override values appended alongside (or NULL if none present).</p>

<p>Very sorry but I did leave out an important element of this question thinking it would make it simpler. Each Override has a column called Customer. The Override class has UNIQUE

<p>I've successfully created my post meta boxes, saved the data and I understand how to retrieve the data. Within the custom meta boxes I have a field for the page branding that will decide what color scheme per the product line we are featuring on that page.</p>

<p>I have a class per the color scheme that is triggered when the body has a class of the product line name appended to it. For example:</p>

<pre><code><body class="product-drinks">
</code></pre>

<p>OR </p>

<pre><code><body class="product-abcwidgets">
</code></pre>

<p>Depending on what product line is selected in the meta box for that post will determine what style sheet will be included. </p>

<p>For example if I chose "product-drinks" then the stylesheet included would be product-drinks.css. </p>

<p>Most of the meta box data I need to use within the loop but I also need to access the page branding mega field data outside of the loop. How would I grab this data if I need it outside of the loop?</p>

<p>I initially thought of placing some of the data in an array while in the loop as such and then referencing the $page_options array value in the body tag as such: </p>

<p>(outside of the loop in the header)</p>

<pre><code><body class="<?php echo $page_options['pageBranding'];?>
</code></pre>

<p>from within the loop"</p>

<pre><code>$page_options = array(

    'pageBranding' => get_post_meta($post_id, 'pageBranding', true),
    'layout'   => get_post_meta($post_id, 'pageLayout', true)
);
</code></pre>

<p>I am running an rails 2.3.5 app and getting a nil:Nilclass in a Controller#show.</p>

<p>This is my Show Action</p>

<pre><code>def show
@category = Category.find_by_url_name(params[:id])
@brands = @category.brands
@categories = Category.find(:all)
@meta_title = "#{@category.name}"

respond_to do |format|
format.html
@brand = @brands.first
@search = Product.search.order(params[:order] || 'descend_by_date')

@products = @search.paginate(:conditions => { :category_id => @category, :
brand_id => @brand }, :page => params[:page])
render :template => 'brands/show'

format.xml { render :xml => @category }
end
end
</code></pre>

<p>So I’m new to grails and I am building a help desk application. The security part will be provided with Spring Security plugin (and Spring Security UI). User will register, log in, go trough few pages of wizard like forms and enter data (subject of incident, description, status, priority, product line, topic, sub-topic, company, contact, etc.).
If logged as administrator user will have access to the administrative panel where he will see all incidents in a table, enter any of them, write a response, change status to closed etc.
First question/dilemma is which is the best way to implement the incident wizard? Do I use standard views or Grails flow or something else? </p>

7964768 Grails HelpDesk

<p>I'm trying to create a gift wrapping module for Drupal commerce. I have created the checkout pane that has a select box for the user to choose if they want their order gift wrapped (and a field to select the giftwrap price on the configuration form). I've also created a giftwrap line item type. In the pane's base_checkout_form_submit() function I would like to create a giftwrap line item that is added to the order alongside the products. This is what I've got so far: </p>

```
<pre><code>/**
 * Implements base_checkout_form_submit()
 */
function commerce_giftwrap_pane_checkout_form_submit($form, &amp;$form_state,
$checkout_pane, $order) {

  $default_currency_code = commerce_default_currency();
  if ($balance = commerce_payment_order_balance($order)) {
    $default_currency_code = $balance['currency_code'];
  }

  // Create the new line item.
  $line_item = commerce_line_item_new('giftwrap', $order-&gt;order_id);

  $line_item-&gt;line_item_label = 'Gift Wrapping';
  $line_item-&gt;quantity = 1;
  $line_item-&gt;commerce_unit_price['amount'] = variable_get('commerce_giftwrap_price',
'2.00');
  $line_item-&gt;commerce_unit_price['currency_code'] = $default_currency_code;

  commerce_line_item_save($line_item);
}
</code></pre>
```

<p>I haven't wrapped it in an if statement yet, I wanted to get it working first. This code is creating a line item in the database however it isn't adding the line item to shopping cart contents view on the checkout review page. I've altered the shopping cart view to include product line items and my newly created giftwrap line items.</p>

<p>Any help on this would be greatly appreciated.</p>

<p>Warning! This problem is not for the feint of heart. I've spent several days in all trying to troubleshoot it.</p>

<p>I have a <code>Wizard</code> control with about 5 steps, each with several controls ranging from very simple to very complex such as custom jQuery combo boxes based on <code>DropDownList</code>s and <code>TextBox</code>es. Each step has several of the controls wrapped in a <code>PlaceHolder</code> control.</p>

<p>The <code>Wizard</code> along with all <code>PlaceHolder</code>s and their child <code>Controls</code> are nested inside of a <code>View</code> of a <code>MultiView</code>. On the same page I have another <code>View</code> styled like a Form, but not one. This view has corresponding <code>PlaceHolder</code>s for each of <code>PlaceHolder</code>s within each step of the <code>Wizard</code>.</p>

<p>Depending on the ReferralUrl I call the following function to "Toggle" the view from the <code>Wizard</code> to the form style view by moving all the controls, then setting the active view as follows:</p>

```
<pre class="lang-vb prettyprint-override"><code>Protected Sub ToggleView() Handles
ViewToggle.Click
    If Wizard_mv.ActiveViewIndex = 0 Then
        ViewToggle.Text = "Toggle Wizard View"
        fPH1.Controls.Add(wPH1)
        fPH2.Controls.Add(wPH2)
        fPH3.Controls.Add(wPH3)
        fPH4.Controls.Add(wPH4)
        fPH5.Controls.Add(wPH5)
        Wizard_mv.ActiveViewIndex = 1
    ElseIf Wizard_mv.ActiveViewIndex = 1 Then
        ViewToggle.Text = "Toggle Form View"
        wPH1.Controls.Add(fPH1)
        wPH2.Controls.Add(fPH2)
        wPH3.Controls.Add(fPH3)
        wPH4.Controls.Add(fPH4)
        wPH5.Controls.Add(fPH5)
        Wizard_mv.ActiveViewIndex = 0
    End If
End Sub
</code></pre>
```

<p>Immediately after this, I use another function for pre-filling the controls with values from a

<p>My problem is that if I click a button and the ajax has not returned yet and I click another button (or the same button) then I end up getting two tables on screen instead of one.</p>

<p>Scenario :
I am building a form and presenting a set of options based of drop down selections. Year/Make/Model combo's bring back a set of product lines - Carpets/Bumpers/Floor Mats/ Sound Deadners etc. Each one of those will become a button and when pressed will bring back the products for that product line.</p>

<p>The products are then looped over and I create a table via javascript to display them. If I push a button once and wait for the table to be displayed everything is good. If I choose another product line the products table is removed and then the ajax call returns the new products and build them into a table again via javascript. The problem I get is when the same button or a different product line button is clicked before a table is built from the first click I get two tables showing.</p>

8406682 cancel current event click and ajax call when another

<p>We have a couple of commercial .Net 2.0 applications that run just fine on Linux with Mono. For consistency across our product line, we've recently ported all of our projects to .Net 4.0. This introduces some problems under Mono, but nothing insurmountable, I'm sure.</p>

<p>When running our assemblies through MoMa, since porting to .Net 4.0, we see a large number of "MonoTodo" issues that I don't know how to interprete. Are these something I can safely ignore?
</p>

<p>e.g., Our MoMa scan report gives:</p>

```
<pre><code>    Calling Method      Method with [MonoTodo]         Reason

<p>I am here to ask for some high-level strategies for maintaining development of a multi-platform product line, in a startup environment. Think in terms of what a company like DropBox does to have an iOS version, an Android, a Mac, a Windows and Linux version. I am interested in all aspects: source control, team organization, testing, the works. An over-all best practice strategy for ending up with killer code on all targeted platforms.</p>

<p>I don't have experience maintaining mature projects in several platforms, so I wonder what advice you have for me. In my specific case, the question is relevant to Android and iOS development, but the questoin is really far more general. I asked that question with my initial impressions here: <a href="http://news.ycombinator.com/item?id=3484074" rel="nofollow"
>http://news.ycombinator.com/item?id=3484074 though I guess I included too much of my own train of thought to be useful. So forget my impressions: what is your experience? What works best?</p>

<p>Thanks for all your feedback!</p>

        DynamicReport dr = drb.build();
```

<p>I am having difficulties removing rows from my MySQL database. I have two tables that I am Joining. Joining may not be the best solutions and I am definitely open to suggestions. the tables are as follows</p>

<pre><code>   Table a
</code></pre>

<p>part_number, cat_code,description   </p>

<pre><code>   Table b
</code></pre>

<p>part_number, cat_code,description</p>

<p>Table b is the correct table its contents has recently been updated. Table b only has a single product line. Table a has All product Lines that the company currently and previously made. Table a has old data and part_numbers that are duplicated and associated with multiple cat_codes.</p>

<p>Properly the cat_codes should have a one to Many relationship with part_numbers.For Example part_number 123,456,and 789 can have a cat_code of 1A.The primary key of both tables are part_number+cat_code</p>

<p>When I run this select statement I get the output of the unique identifiers I need to remove from table a.</p>

<pre><code>SELECT CONCAT(a.part_number,a.cat_code)
FROM
b
INNER JOIN
a
WHERE
a.part_numer = b.part_number
AND a.cat_code != b.cat_code
</code></pre>

<p>But when I try to use that select statement in a DELETE FROM Statement it doesn't work. Here is the broken statement.</p>

<pre><code>DELETE FROM
a
WHERE

<p>Bootstrap css uses the halflings from <a href="http://glyphicons.com/" rel="noreferrer"
>Glyphicons.
If I purchased their full product line, how would I incorporate that into the bootstrap framework?</p>

9486443		bootstrap Glyphicons

<p>I want to create a library repository of code, if something is in the lib then it will be a) a third party component or b) be internal developed but shared across multiples projects.</p>

<pre><code>lib\
 JVCL\
  ..\
 JCL\
  ..\
 MyFrameworkABC\
  ..\
 MyLibraryXYZ\
  ..\
</code></pre>

<p>Currently I'm using multiples repositories per project or per product line</p>

<pre><code>projectA\ -> repositoryA
 ..\
projectB\ -> repositoryB
 ..\
</code></pre>

<p>When I make a tag in projectA I want to be able to go back in time exactly to the same state of the codebase from the project and also from the lib repository.</p>

<p>Because the two repositories are independient (project and lib), the only linkage available is with externals properties.. right? But the lib subtree it is outside the scope of the projectA, so I can't configure the external property there.</p>

<p>I will be able to get a "bad" solution to my problem if I repeat the lib branch as an external in each project substructure, like:</p>

<pre><code>projectA\ --> repositoryA\tags\3.4.5
 lib\ --> external to lib repository tag (\lib\tags\1.5 for example)
  dvcl\
  vcl\
  ..
 source\
 documentation\
 build\
 ..
projectB\ --> repositoryB\tags\1.5.2

```
<p>I’m building an application to track orders of tailor made products. Each product can have
many custom details. The screen to add products to an order and customize each one should
look like this:</p>

<pre><code>&lt;button&gt;+&lt;/button&gt;&lt;!-- "Add new product line" button --&gt;
&lt;table&gt;
  &lt;thead&gt;
    &lt;tr&gt;
      &lt;th&gt;&lt;/th&gt;
      &lt;th&gt;Producto&lt;/th&gt;&lt;!-- The product category or type --&gt;
      &lt;th&gt;Modelo&lt;/th&gt;&lt;!-- The product --&gt;
      &lt;th&gt;Cantidad&lt;/th&gt;&lt;!-- Quantity --&gt;
      &lt;th&gt;Unitario&lt;/th&gt;&lt;!-- Unit Price --&gt;
      &lt;th&gt;Mano de Obra&lt;/th&gt;&lt;!-- The price of the product itself --&gt;
      &lt;th&gt;Genero&lt;/th&gt;&lt;!-- The price of the customization --&gt;
    &lt;/tr&gt;
  &lt;/thead&gt;
  &lt;tbody&gt;
    &lt;tr class="producto"&gt;&lt;!-- Product line --&gt;
      &lt;td&gt;&lt;button&gt;-&lt;/button&gt;&lt;/td&gt;&lt;!-- "Remove" button, should
remove the product and it's customizations --&gt;
      &lt;td&gt;&lt;select&gt;Producto&lt;/select&gt;&lt;/td&gt;&lt;!-- Choose category --&gt;
      &lt;td&gt;&lt;select&gt;Modelo&lt;/select&gt;&lt;/td&gt;&lt;!-- Choose product --&gt;
      &lt;td&gt;&lt;input type="text" class="cantidad" /&gt;&lt;/td&gt;&lt;!-- Enter quantity --
&gt;
      &lt;td&gt;&lt;input type="text" class="unitario" /&gt;&lt;/td&gt;&lt;!-- Enter unit price --
&gt;
      &lt;td&gt;$ &lt;span class="mano_obra"&gt;&lt;/span&gt;&lt;/td&gt;&lt;!-- Line total.
The product lines calculates on this column --&gt;
      &lt;td&gt;&lt;button&gt;+&lt;/button&gt;&lt;/td&gt;&lt;!-- "Add customization" button.
Should add a line like the next &lt;tr&gt; --&gt;
    &lt;/tr&gt;
    &lt;tr class="genero"&gt;&lt;!-- Customization line --&gt;
      &lt;td&gt;&lt;button&gt;-&lt;/button&gt;&lt;/td&gt;&lt;!-- "Remove" button, should
remove only this customization line --&gt;
      &lt;td&gt;Genero&lt;/td&gt;&lt;!-- Fixed text --&gt;
      &lt;td&gt;&lt;input type="text" class="genero" /&gt;&lt;/td&gt;&lt;!-- Enter
customization description --&gt;
      &lt;td&gt;&lt;input type="text" class="cantidad" /&gt;&lt;/td&gt;&lt;!-- Enter quantity --
&gt;
      &lt;td&gt;&lt;input type="text" class="unitario" /&gt;&lt;/td&gt;&lt;!-- Enter unit price --
```

<p>I'm trying to use knockoutjs to implement a simple click and edit system. The value seems to be updating correctly if I change the input focus, but I can't seem to get the value to update when I use a keypress event binding: http://jsfiddle.net/rxYGz/11/</p>

```
<pre><code>        function Item(label, value)
{
this.label = ko.observable(label);
this.value = ko.observable(value);

this.editing = ko.observable(false);

this.editItem = function(e) {
   this.editing(true);
}

this.checkEditDone = function(e,f) {

   if (e.which == 13)
   {
      this.editing(false);
   }
   else
   return true;
};

return this;
};

var SimpleViewModel = {

editItem: function(item) {
  item.editing(true);
},

templateToUse: function(item) {
  return item.editing() ? 'editTmpl' : 'viewTmpl';
},

title : ko.observable(new Item('Request Title', 'EDIT THIS TITLE')),
```

<p>I have a table: Order Detail. An Order has many details, in my case 100 fields. Is it common in databases to have 100 fields in a table or should I be looking to break it up into smaller tables and how? Thanks!</p>

<p>Some of the data in the Order Detail table is used by Sales Managers, other data is used by Product Line Specialists, and yet other data is used by Purchasing.</p>

<p>Should I keep it all together or should I break it apart and which NF would apply to this level?</p>

9910058 If I have a table that has 100 fields does that indicate

<p>I am a predominantly PHP developer. I realize in this day and age specialization in one scripting language doesn't cut it, but the fact remains that my skills at JavaScript and jQuery are pretty green. I am a novice at best. I can create my own code but Cross Browser compatibility remains a huge issue with my work in JavaScript.</p>

<p>Anyway, I have a script that filters products according to categories/subcategories. This is how it works: you select a category and the javascript in the background does its thing to filter the subcategories so that the options displayed are the ones pertaining to the parent category- a combination of these two filters the product line.</p>

<p>Here is my code:</p>

```
<pre><code>function scategories(){

    //get the category option value from the category drop down bar
    var cat = (document.getElementById('categories').value);

    //get all the options from the subcategory drop down bar
    var subcat = document.getElementsByClassName('subcategories');

    var n=0;

    //if the category bar option is set to 0 display everything
    if(Number(cat)==0){
        Show();
    }

    //filter the subcategories
    while(subcat.item(n)){

        //if there is no match b/w the subcategories option and the categories id FILTER
        if(Number((subcat.item(n).value).split('|')[1]) != Number(cat) &amp;&amp; Number
(subcat.item(n).value) != 0){
            document.getElementsByClassName('subcategories')
                .item(n)
                .style
                .display="none";
        }else{

            //else display the subcategory
            document.getElementsByClassName('subcategories')
                .item(n)
```

<p>I have some very ugly data I am trying to massage. It consist of SKUs and I want to group them into product line. E.g.:</p>

<pre><code>PRODUCT_ID

313L30WHITE
313L40WHITE
313L30BLACK
3333
2L10RED
2L20BLACK
32341/30/BLK
</code></pre>

<p>Basically, I want to group items by the first numeric characters in the <code>PRODUCT_ID</code> field. I.e., all the characters up to the first non-numeric character. E.g.:</p>

<pre><code>PRODUCT_ID   GROUP
----------   -----
313L30WHITE   313
313L40WHITE   313
313L30BLACK   313
3333   3333
2L10RED   2
2L20BLACK   2
32341/30/BLK 32341
</code></pre>

<p>Seems like a SQL solution would not be elegant. Because of that, I would prefer a Python solution that creates a new table with a new <code>GROUP</code> column.</p>

<p>Anyone have any suggestions? </p>

9969539 How to group rows by the numeric characters in a str

<p>I have three tables (lots in reality but these three are the ones I have to worry about right now)</p>

<p>A product line table like...</p>

<pre><code>ProductLineId (pk)
Name
Description
Price
Finance Event (FK)
</code></pre>

<p>and a finance event table like...</p>

<pre><code>EventId (pk)
Event Description
</code></pre>

<p>and a Financial Transaction table like...</p>

<pre><code>TransactionId (pk)
FinanceEventId (fk)
LotsOfSageReferencesAndOtherForeignKeys
</code></pre>

<p>When a sale is processed it creates transaction records based on the Finance Events etc.
</p>

<p>The question is; if someone in the admin then goes in and changes the Finance event what is the best way of versioning the events table, while preserving the primary key.</p>

9995227 Non-destructive updates, versioning finance data in S

<p>I am trying to query the http://developer.pintlabs.com/brewerydb/api-documentation with jquery.ajax. </p>

<p>These are two of the Jquery requests i tried (note that "O3tmVI" is a dummy ID):</p>

<pre><code> $.ajax({
        url:"http://api.playground.brewerydb.com/beer/" + "O3tmVI" + "?key=A1029384756B&format=json",
        dataType: "jsonp",
        jsonpCallback: "callbackfunctie",
        success:function(oData){
            var returnData = oData;
            console.log(returnData);
        }
    });
</code></pre>

<p>And:</p>

<pre><code>$.getJSON("http://api.playground.brewerydb.com/beer/" + "O3tmVI" + "?key=A1029384756B&format=json&jsoncallback=?",
            function(data){
                console.log(data);
            });
</code></pre>

<p>Both cause this error:</p>

<blockquote>
  <p>Uncaught SyntaxError: Unexpected token :</p>
</blockquote>

<p>Now, the json object returned looks like this:</p>

<pre><code>{"message":"Request Successful","data":{"id":"O3tmVI","name":"The Public","description":"The Public\u2122 is a delicious easy drinking pale ale made from a simple recipe of quality grain and top notch American hops. Tawny hues of caramel and amber are a trademark of the Public ale as well as a delicious spruce crispness resulting from a beautiful abundance of hops! This beer will be produced throughout the year and serves as the foundation of our product line.","abv":"6","glasswareId":8,"availableId":1,"styleId":33,"

<p>UPDATE: This problem is probably due to my lack of understanding of the SPA template and techniques. I tried to ignore the upshot library and did a lot of manual modifications to the template prior to this error. Please vote to close as non-constructive.</p>

<p>I'm trying out ASP.Net MVC4 SPA Projects with real-world type scenarios. Since upshot is just not there yet, i'm using just the WebAPI part and Knockout with JQuery Ajax methods on the client side.</p>

<p>Everything was ok until I had to post data with arbitrary parameters:</p>

<p>This is my controller:</p>

```
<pre><code>public class ProductLineController : DbDataController&lt;WebSiteContext&gt;
{
    [HttpPost]
    public HttpResponseMessage&lt;Order&gt; AddProductLine(int productId, int orderId)
    {
        [invoke logic to add the product line]
        [return the updated order]
    }
}
</code></pre>
```

<p>The client code to invoke this controller is on a Knockout viewmodel as follows:</p>

```
<pre><code>this.addProduct = function (product) {
    var prodId = product.ProductId;

    var requestUrl = baseUrl + "productline";
    $.ajax({
        url: requestUrl,
        cache: false,
        type: 'POST',
        data: JSON.stringify({productId: prodId, orderId: orderId}),
        dataType:"json",
        contentType: 'application/json; charset=utf-8',
        success: function (data) {
            self.order(data);
        }
    });
</code></pre>
```

```
<p>I'm writing a custom text field type for my product SKUs.</p>

<p>If I have a SKU such as <code>ABC-DEF123G/5</code> (just an example), I want users to be
able to search with or without the punctuation. In many cases, only part of the SKU is relevant,
e.g. <code>ABC-DEF123</code> in my example.</p>

<p>So far, I've got my <code>schema.xml</code> looking like:</p>

<pre><code>&lt;fieldType name="sku" class="solr.TextField" omitNorms="false"&gt;
    &lt;analyzer&gt;
        &lt;tokenizer class="solr.KeywordTokenizerFactory"/&gt;
        &lt;filter class="solr.LowerCaseFilterFactory"/&gt;
        &lt;filter class="solr.WordDelimiterFilterFactory"
            splitOnCaseChange="0"
            splitOnNumerics="0"
            stemEnglishPossessive="0"
            catenateAll="1"
        /&gt;
        &lt;filter class="solr.EdgeNGramFilterFactory" minGramSize="3" maxGramSize="15"/&gt;
    &lt;/analyzer&gt;
&lt;/fieldType&gt;

&lt;!-- For use in Sunspot: --&gt;
&lt;dynamicField name="*_sku" stored="false" type="sku" multiValued="true" indexed="true"
/&gt;
</code></pre>

<p>This works well in that I can search for parts of a SKU, e.g. <code>DEF123</code> and get
an appropriate result (thanks to the ngram filter). However, searching without punctuation
delimiters doesn't return any matches: <code>ABC-DEF123G/5</code> is fine but
<code>ABCDEF123G5</code> is not.</p>

<p>When I do analysis on my schema I see that searching for <code>ABCDEF123G5</code> has
highlighted matches but when running an actual query there are no results returned.</p>

<p>I have restarted Solr and reindexed my documents. Many times.</p>

<p>Any pearls of wisdom on indexing SKUs or similar?</p>

<hr>
```

<p>I have created TreeView in asp.net page.When user select the any node then i want to get the immediate previous TreeNode and immediate next TreeNode of the current selected TreeNode.There is a method in C# windows form application.But it is not available in web controls TreeView.</p>

<p>for example :
<img src="https://i.stack.imgur.com/oMdD0.jpg" alt="enter image description here"></p>

<p>Suppose,</p>

<p>user selecting "Sales Order Detail" then i want to get previous Node ->"Product Line Sales" and next Node ->"Territory Sales Drilldown"</p>

<p>2.User selecting "SampleReports" then i want to get the Previous Node->"Employees" and next Node ->"Company Sales".</p>

10612272 how to get the immediate previous node and next no

<p>So I have a table like this </p>

<p>Table 1 </p>

<pre><code> Quote Ref | Product A | Product B | Product C | Product D
-----------+-----------+-------------+-----------+-----------
12 | 222333 | 4748847478 | 0 | 0
</code></pre>

<p>I need to find out which <code>Business Group</code> this belongs to using the below Table . </p>

<p>I am not interested in fields for the Products that equal zero as the quote does not have those products so no Business Group to map . For this quote the Product A and B column have a non zero value and can be mapped to a business group. (KEY POINT) </p>

<p>Table 2 </p>

<pre><code>Product Line | Business Group
Product A | Manfacturing
Product B | Tech Net
</code></pre>

<p>So I look to <code>UNPIVOT</code> data in Table 1 .</p>

<pre><code>SELECT [QUOTE Ref], [Product Line], [Value]

FROM
(SELECT [QUOTE Ref], [Product A], [Product B], [Product C], [Product D]

FROM [Table1]) p
UNPIVOT
([Value] FOR [Product Line]
IN ([Product A], [Product B], [Product C], [Product D])
)AS unpvt;
</code></pre>

<p>DATA for table 1 now like this </p>

<pre><code> Quote Ref | Product Line | Value
-----------+--------------+------------
12 | Product A | 222333

<p>I'm facing a problem when I try to grab the Extended Amount Attribute inside the Opportunity Product Line Entity.
As follows my requirements are that upon creation of a an Opportunity Product Line I have a post-create plugin on it which applies a discount onto the extended amount and creates another line, with the new discounted extended amount. When I try to output the value on another field just to check what it gets, I keep getting 0 strangley. My code is as follows:</p>

```
<pre><code>// Part where I grab the value
Entity entity = (Entity)context.InputParameters["Target"];
Money extenedAmount = (Money)entity["baseamount"];

//Create new line
Entity oppportunity_product = new Entity("opportunityproduct");
oppportunity_product["manualdiscountamount"] = extenedAmount;

service.Create(oppportunity_product);
</code></pre>
```

<p>Is it even possible to grab the amount? Would really much appreciate if someone could help me out here. Thanks in advanace.</p>

11160383 Grab System Created Values CRM 2011

<p>I have a ViewModel called AssetSearchModel with a property of type: List. </p>

<p>When I post from the ViewModel, all the properties of my List get binded back to the model successfully, except for this one: <code>public DomainsDto DomainControl { get; set; }</code> which is defined at the bottom.</p>

<p>That domaincontrol has a couple of properties and then its own nested list... none of its properties get set, they are all null</p>

```
<pre><code>public class AssetSearchModel
{
    public List&lt;SearchControlModel&gt; SearchControls { get; set; }

    public AssetSearchModel()
    {
    }

}

public class SearchControlModel
{

    /// &lt;summary&gt;
    /// Asset identifier.
    /// &lt;/summary&gt;
    [DisplayName("AssetId ID")]
    public int SearchOptionID { get; set; } // this gets bound ok

    [DisplayName("Asset Customer ID")]
    public int AssetCustomerID { get; set; } // this gets bound ok

    [DisplayName("Portal ID")]
    public int PortalID { get; set; } // this gets bound ok

    [DisplayName("Calling Page")]
    public string CallingPage { get; set; } // this gets bound ok

    [DisplayName("Display Control")]
    public string DisplayControl { get; set; } // this gets bound ok

    [DisplayName("Display Text")]
    public string DisplayText { get; set; } // this gets bound ok
```

<p>I'm developing a search engine type of application using JSF. Upon searching using a keyword, it return results. In order to refine the search, I have to provide multiple filter categories, each having an auto-complete textbox and checkboxes in it. Upon typing in the textbox, it has to show suggestions and upon selection, it has to check the corresponding checkbox.</p>

<p>I tried jquery UI multiselect plugin, but the headers remain the same for all categories. (If I specify header for Product Line GPL in jqueryui.multiselect.js it appears same for all criteria). </p>

<p>Is there any other way to change the header dynamically or any other component that I can use?</p>

11779938 autocomplete for multiple search categories

<p>I'm trying to add a product to an ubercart order in Drupal 6, for a "free gift for recurring customer". I have already integrated it with ubercart's conditional actions, and that works fine.

What I am struggleing with, is adding the product to the order. I'm able to add the produkt to the cart, using:</p>

<blockquote>
  <p>uc_cart_add_item($settings['gift_product'], $settings['gift_product_quantity']); </p>
</blockquote>

<p>To avoid fraud, and the customer not just clicking back and change the quantity of the free product, I would like to add it after checkout, so the line will apear on the order confirmation, and when packing the order. (If there is a better way to achieve this, please enlighten me)
The following code, does not add a product line, but a "charge", but it's the closest I have gotten: </p>

<blockquote>
  <p>uc_order_line_item_add($order->order_id, $settings['gift_product'], $product->title, $settings['gift_product_quantity']);</p>
</blockquote>

<p>As a side thing, I would like to know, if it's possible, and then how, to set the price, on the added product line, or add a 100% discount to that one order line. </p>

<p>I've been searching for a solution for this, for the most of a week, but I can't seem to find the right solution. </p>

<p>Thank you in advance.</p>

11811680 Ubercart 2.x - Add produkt line to order via php

<p>Check is a model that has the attributes product_line_id and date.</p>

<p>I have four instances of the Check model. They all have different dates. Two belong to product line 1 and the other two belong to product line 2.</p>

<p>How do I call a query on the Check model to return one check for each product line having the greatest date for for that product line?</p>

11818944 SQL query in rails to group ordered records

<p>This question is a follow up of my previous question. I was able to match the query item and query names for the lineage thanks to the answer provided. However, I am now getting repeated query item names since the same item is used in multiple query nodes. </p>

<p>To explain a little bit about the XML, the dataItem "Region" is located in multiple queries and the XSL is going through and matching the root/lineage/item/name to the queries/query/selection/dataItem/expression in the XML. However since "Region" is located in multiple queries, it grabs it multiple times. I only want it once. This is a sample of the XML I am working with, :</p>

```
<pre><code>&lt;root&gt;
  &lt;lineage&gt;
    &lt;item&gt;
      &lt;name&gt;[Sales (query)].[Retailers].[Retailer Province-State]&lt;/name&gt;
      &lt;ns&gt;[goretailers]&lt;/ns&gt;
      &lt;qs&gt;[RETAILER_SITE]&lt;/qs&gt;
      &lt;qi&gt;[Retailer Province-State]&lt;/qi&gt;
    &lt;/item&gt;
    &lt;item&gt;
      &lt;name&gt;[Sales (query)].[Products].[Product line]&lt;/name&gt;
      &lt;exp&gt;#'[gosales].[PRODUCT_LINE].[PRODUCT_LINE_'+ $Language_lookup{$runLocale}
+ '] '#&lt;/exp&gt;
    &lt;/item&gt;
  &lt;/lineage&gt;

 &lt;!--There is more XML code in between --&gt;

&lt;queries&gt;
    &lt;query name="RevenuMapquery"&gt;
    &lt;!--More Code in between that is unimportant--&gt;
    &lt;selection&gt;
        &lt;dataItem name="Region"&gt;
            &lt;expression&gt;[AllRegion].[Region]&lt;/expression&gt;
        &lt;/dataItem&gt;
        &lt;dataItem name="Revenue"&gt;
            &lt;expression&gt;[MeasureRevenue].[Revenue]&lt;/expression&gt;
        &lt;/dataItem&gt;
        &lt;dataItem name="Planned revenue"&gt;
            &lt;expression&gt;[MeasureRevenue].[Planned revenue]&lt;/expression&gt;
        &lt;/dataItem&gt;
    &lt;/selection&gt;
    &lt;/query&gt;
```

<p>I'm not a developer, but I'm attempting to learn since I've reached a point where I need code to customize and automate further. I've created a custom "Sales Price" field for Opportunity Products that I am using to replace the standard Sales Price field. I want the custom field to default with the price book entry list price (unitprice) value as does the standard Sales Price field. Then I have the standard Sales Price field getting updated to equal the custom Sales Price times the number of month terms (custom field that will be updated at Opportunity level and automatically populated in reflective custom field on Opportunity Products via trigger). I've created triggers for both the Sales Price value to default and the Month Terms to default, but neither seems to be working now.   Below is the trigger for the Sales Price value when creating a new opportunity line item. Not sure how to get the price to default when adding a new product line item? It should only default when adding new since I don't want it to override any amount that they put in and save. But it also needs to work if they go back into the opp and add additional items later. Any input on this is greatly appreciated. I've spent hours searching posts and other documentation, but I don't have that natural developer brain, and I'm banging my head!</p>

```
<pre><code>trigger SalesPricecustom on OpportunityLineItem (before insert) {
   Set&lt;Id&gt; pbeIds = new Set&lt;Id&gt;();
      for (OpportunityLineItem oli : Trigger.new)
      pbeIds.add(oli.pricebookentryid);

   Map&lt;Id, PricebookEntry&gt; entries = new Map&lt;Id, PricebookEntry&gt;(
      [select UnitPrice from pricebookentry
       where id in :pbeIds]);

for (OpportunityLineItem oli :trigger.new){
    if(pricebookentry.unitprice &lt;&gt; null &amp;&amp; oli.sales_price__c == null){

   oli.sales_price__c = entries.get(oli.pricebookEntryId).UnitPrice;
  }
}}
</code></pre>
```

<p>Thanks!</p>

11954745 Apex trigger to default field values when adding oppc

<p>I am pulling out order details in Magento (4.1.1) with the below code, which works fine. But, where a product has been ordered twice, I need to have a repeated row, SO If the same item is purchased multiple times in the same order, they need to be treated as multiple individual items - presently Magento returns one single product line, with a Quantity value for multiple purchases of the same item:</p>

<pre><code>$_customerId = Mage::getSingleton('customer/session')->getCustomerId();

```
    $lastOrderId = Mage::getSingleton('checkout/session')-&gt;getLastOrderId();
    $order = Mage::getSingleton('sales/order');
    $order-&gt;load($lastOrderId);
    $_totalData =$order-&gt;getData();
    $_order   = $this-&gt;getOrder();
    $allitems = $order-&gt;getAllItems();
    $index    = 1;

    $data   = ""

    foreach($allitems as $item)
    {
      $cjData.="|".$item-&gt;getPrice()."::".$item-&gt;getName()."::".$item-&gt;getQtyToShip();
      $index++;
    }

    echo $cjData
```

</code></pre>

<p>If the same item is purchased multiple times in the same order, I need to treat them as multiple individual items - any help on achieving this much appreciated.</p>

11969754 If the same item is purchased multiple times in the sa

<p>I am about to start work on a Mozilla plugin for my company's main product line. I was under the impression that I could build using the Gecko SDK, say two major revisions ago, and that would cover any browser a person would reasonably be using. I am also assuming that this will also cover Chrome and Opera (fact check someone?).</p>

<p>However, I was just reading the documentation and I found this:</p>

<blockquote>
<p>For Gecko versions before 2.0, you should choose the Gecko SDK version for the earliest version of Mozilla you wish to target. For Gecko versions 2.0 and higher, you must recompile your component for each release as cross-version compatibility is no longer supported.</p>
</blockquote>

<p>Someone please tell me this doesn't mean what I think it means. Does this mean that I am going to have to recompile my plugin for each version of Gecko indefinitely--even after deployment? That doesn't seem like something that the great team over at Mozilla would inflict upon us.</p>

12007977 Mozilla Plugins, will I have to recompile each time the

<p>In order to produce "Production Report" I need to join many tables together and find out sum of product line's qty that was produced in each lot and what is the latest activity that each line produced. </p>

<p>I can sum data and find out the MAX activity in separate SQL query, but when i joined them, the query show error. So could you please help me. Thank you very much.</p>

<p>My tables are below :</p>

UASDF   2   0:0:0:8
ERTEU   4   0:3:0:46
</pre>

<pre>
Expected Output:
TTPLL   8   02:04:00:18
ASDASDADD   1   00:00:09:00
UASDF   2   00:00:00:08
ERTEU   4   00:03:00:46
</pre>

<p>Can anyone help me out to achieve the above format?</p>

<p>Please let me know for any alternative solution to get above output format other than truncate position.</p>

<p>Thanks in advance,</p>

<p>I'm working on a Volusion webstore. I'm doing some custom templating, design changes and I integrate some nifty JavaScript libraries. But I want to be very cautious with the production version of the webstore. If some of these design changes would go terribly wrong, potential customers would see these errors, too.</p>

<p>The Volusion Support Center has the following article:</p>

<blockquote>
<p>There may be times when you need to close your storefront for a brief period. For example, you may need to update your product line through an import or make extensive design changes – you probably don't want customers browsing the store while you’re working on it.
To temporarily close your store:
Go to Settings > Maintenance in your Admin Area.
Click Close My Store.
To re-open the store when your changes have been made, click Open My Store. </p>

<p>Closing the store does not hinder your access to the Admin Area. While the store is closed, you'll see a message at the top of the storefront stating that the store is currently closed to customers, but you will still be able to navigate through it.
Visitors to your storefront will be greeted with a default message stating that the site is temporarily down for maintenance and will be back online shortly.
You can tailor this message by clicking Customize Your Maintenance Message Here.</p>
</blockquote>

<p>Sadly, this is not what I want. I want my production webstore to keep running while I make some design changes to a duplicate to be able to assess the quality of my work. If I am satified with it, I want to move the design changes to the production webstore.</p>

<p>What would be a good way to achieve this? I've been thinking about copying all files from the FTP server and try to run them on a local IIS server? But that seems like a lot of work, and I'm not sure it is worth the effort. Any thoughts?</p>

12697309 Duplicate a Volusion webstore for testing purposes

<p>I have 3 models:</p>

<pre><code>class ProductLine < ActiveRecord::Base
  has_many :specifications
  has_many :specification_categories, :through => :specifications,
end

class Specification < ActiveRecord::Base
  belongs_to :product_line
  belongs_to :specification_category
end

class SpecificationCategory < ActiveRecord::Base
  has_many :specifications
  has_many :product_lines, :through => :specifications
end
</code></pre>

<p>Basically, we are showing the specifications as a subset of data on the product line page and we would like to do something like (example only, yes I'm aware of N+1):</p>

<p>Controller:</p>

<pre><code>@product_line = ProductLine.find(params[:id])
@specification_categories = @product_line.specification_categories)
</code></pre>

<p>View:</p>

<pre><code>@specification_categories.each do |specification_category|
 ...
 specification_category.specifications.each do |specification|
  ...
 end
end
</code></pre>

<p>The issue here is getting rails to filter the specifications by ProductLine. I've tried constructing queries to do this but it always generates a separate NEW query when the final association is called. Even though we aren't using the code above now (not a good idea here, since we could potentially run into an N+1 problem), I'd like to know if it's even possible to do a

<p>I came across a timeout function in a product line code which get me really confused:</p>

<pre><code>int TestTimeOut(unsigned long Timed_Val1, unsigned long Timed_Val2)
{
  Timed_Val2 = Timed_Val1 + (Timed_Val2 * 200);
  if (((Timed_Val1 > Timed_Val2) && (sys_msec < Timed_Val1) && (sys_msec > Timed_Val2)) || ((Timed_Val1 < Timed_Val2) && ((sys_msec < Timed_Val1) || (sys_msec > Timed_Val2))))
    return TRUE;
  return FALSE;
}
</code></pre>

<p>And here is how it's used:</p>

<pre><code>unsigned long Timeout = sys_msec;
#define MAX_TIMEOUT   15L

  while (!com_eot(1)) //to check if some transmission in progress in COM1
    if (TestTimeOut(Timeout, MAX_TIMEOUT))
      return FALSE;
  return TRUE;
</code></pre>

<p>How does it work? I am totally confused by the 3 lines in TestTimeOut(). Thanks,</p>

13239129 A simple timeout function

<p>Hi I am using InfoWindow to get custom popup on google maps,
but I can't set it width, I tried setting it inline to wrapper tag, but it doesn't work.
In this case I need it to be 750px.</p>

<p>Here is jsfiddle: http://jsfiddle.
net/xxast/
and here is html file: <a href="http://www.mediafire.com/view/?66dbe6xzn1mul10" rel="

```

<p>Assignment completed. I figured everything out with trial and error. Only one thing bothers me about this. Below each table that rests below a company name there is no spacing underneath the table and before the next company name. It looks tacky. Would like to add a space below each table. Any ideas??</p>

<p>I'm working on a project in XML and XSLT and have done quite a bit of it. All that is left is to put the description text on the right hand side of the table and to populate the second column of the table with the proper information.</p>

<p>I have tried float:right, text-align:right, and align:right for the descriptive text but it will not move to the right hand side of the tables. Any ideas on how to do so?</p>

<p>Also I need to fill the second column of the table in each row with some information that directly relates to that company. I understand how to work with data to fill a table but this information is not data. For example the first row and column within the table is "Category". I hard coded the word "Category" into the first column. For the second column in that row I need the right type of category to show up, as in "Industrial", but the word "Industrial" is not data - it is set up as follows: Industrial. I have left the blank for where the information is to go. </p>

<p>Here is a link to my website:</p>

<p>Here is my code:</p>

<p>I'm using SQL Server 2005. I created a stored procedure which works most of the time, but I found an instance of where it doesn't do what I want. </p>

<p>Currently, the code does something like this</p>

<pre><code>if @@error <> 0
  begin
   select @message_error = "There was a database error adding product "+ @product + " to product line
  end
</code></pre>

<p>Where <code>@message_error</code> is an output variable.</p>

<p>So, I can <code>select @@error</code> and get a number, but all I really want is the SQL error. </p>

<p>Something like Hey, I couldn't do this because there is a fk constraint on this column or whatever. I found this article on msdn
 http://msdn.microsoft.com/en-us/library/ms178592(v=sql.90).aspx</p>

<p>But it only goes over throwing custom exceptions with <code>RAISERROR</code>, I don't want to create my own error message or exception, I just want to know why stuff isn't working. I can execute the stored procedure through Management Studio and see the exact SQL error, but this is tedious trying to match data from the site and manually inserting it that way. </p>

<p>How do I get the SQL error text into an output variable?</p>

13647437 How to get sql error in stored procedure

<p>I have a drupal commerce + line items + taxonomies + fancy attributes.</p>

<pre><code>Product:
-sku
-...
-shape (product line item) - taxonomies (text + image)
</code></pre>

<p><img src="https://i.stack.imgur.com/Cki5X.jpg" alt="enter image description here"></p>

<p>And taxonomies images doesn’t display at all (text is ok).</p>

<p>When I do it with product variations (shape (product field) - taxonomies (image)) everything is ok, but I need 3 options of variation with many many attributes and it’s not possible to create million of SKU products for the same item.</p>

<p>How I’ll display the taxonomy image from a line item?
(maybe some other solution?)</p>

<p>I have setup an error handler but I'm not sure how to, or if it is even possible, to ignore an element if it causes an error? </p>

<pre><code>/* load the file on the DOM*/
$dom = new DomDocument();
$dom->load($filename);

if (!$dom->load($filename)) {
    foreach (libxml_get_errors() as $error) {
        // handle errors here

    }

    libxml_clear_errors();
}
</code></pre>

<p>Any help greatly appreciated, thanks.</p>

14213470 Skip xml "premature end of data" error

<p>Alright, so I have these checkboxes of Products and I want to make sure at least one Product is selected.</p>

<p>To do this, my ViewModel contains:</p>

<pre><code>[DisplayName(@"Product Line")]
[MinChecked(1)]
public List<CheckboxInfo> ActiveProducts { get; set; }
</code></pre>

<p>The View simply contains:</p>

<pre><code>@Html.EditorFor(x => x.ActiveProducts)
</code></pre>

<p>That EditorTemplate contains:</p>

<pre><code>@model Rad.Models.CheckboxInfo

@Html.HiddenFor(x => x.Value)
@Html.HiddenFor(x => x.Name)
@Html.CheckBoxFor(x => x.Selected)
@Html.LabelFor(x => x.Selected, Model.Name)
</code></pre>

<p>The custom dataannotation is:</p>

<pre><code>[AttributeUsage(AttributeTargets.Property, AllowMultiple = true)]
public class MinCheckedAttribute : ValidationAttribute, IClientValidatable
{
    public int MinValue { get; set; }

    public MinCheckedAttribute(int minValue)
    {
        MinValue = minValue;
        ErrorMessage = "At least " + MinValue + " {0} needs to be checked.";
    }

    public override string FormatErrorMessage(string propName)
    {
        return string.Format(ErrorMessage, propName);
    }

<p>I'm working with a crosstab in cognos now.</p>

<p>Page 1 contains crosstab</p>

<p>Page 2 contains list</p>

<p>Fact - Revenue
Dimension - Product line, Year</p>

<p>If I click on the revenue (cell value) it should goto the particular record in another list which is located in a separate page.
However, the fact could not be bookmarked. I don't know why. Do you have suggestions?</p>

<p>Thanks in advance. </p>

14277751 Why bookmark is not working for facts in cognos?

<p>I would like to know if I can use the promotion group functionality to take one product from a product line that I have used as membership, and another from a product class that I have used also as another membership?</p>

<p>I want this to used it as compatibility rule, I.E., a product from product line A excludes product A from product class A.</p>

14477522 Siebel promotion groups

<p>I have a MDX Dimension , whose main hierarchy has the following levels :</p>

 Product Line key : PLid
 Profit Center key : PCid
 Team key : TEid
 Employee (binding level to my fact tables) key: EMPid

<p>This one works fine, but the users want a flexible upper part of the hierarchy, that varies from year to year</p>

Year
Product Line
Profit Center
Team
Employee

<p>with the attribute relationship "Product Line" -> "Profit Center" varying a lot from year to year, and Profit Center -> Team -> Employee remaining constant.</p>

<p>The problem I have is that facts are more than often linked to more than one element of this new hierarchy. And I found that elements are not dispatched properly following this hierarchy, I have the global total at all level.</p>

<p>I have a table giving the association (Year, PLid, PCid)</p>

<p>What I can't do is forcefully binding elements of the fact table on this new hierarchy, because creating year * nb employees would be too much. and the head part can be changed on a whim.</p>

<p>I'm working with a crosstab in cognos now.</p>

<p>Page 1 contains crosstab</p>

<p>Page 2 contains list</p>

<p>Fact - Revenue Dimension - Product line, Year</p>

<p>If I click on the revenue (cell value) it should goto the particular record in another list which is located in a separate page. Actually I'm passing data item values. I have to pass two data item values which corresponds to the cell value (Horizontal and veritical). However, the fact could not be bookmarked. I don't know why. Do you have suggestions?</p>

<p>Thanks in advance.</p>

14563838 How to pass two values when a bookmark is clicked ir

<p>I am trying to create a search from ProductDB(database), the main columns I would like the user to search is Material_No and Product_Line.</p>

<p>So far, I have the following:</p>

<p>Drop Down List:</p>

<pre><code><asp:DropDownList ID="DropDownList" runat="server" Height="16px"
    onclick="SearchButton_Click" Width="144px"
    AutoPostBack="True">
    <asp:ListItem>Please select...</asp:ListItem>
    <asp:ListItem Value="0">Material No</asp:ListItem>
    <asp:ListItem Value="1">Product Line</asp:ListItem>
  </asp:DropDownList>
</code></pre>

<p>TextBox:</p>

<pre><code><asp:TextBox ID="TextBox1" runat="server" ontextchanged="
TextBox1_TextChanged">
</asp:TextBox>
</code></pre>

<p>Search Button:</p>

<pre><code><asp:Button ID="SearchButton" runat="server" Text="Search"
onclick="SearchButton_Click" />
</code></pre>

<p>So I am trying to do is when the user chooses either Material No or Product Line when he types the Material No or Product Line after clicking the search button, the result should show either in grid format or something similar, and if he just clicks search without choosing anything all the result should show.</p>

<p>Here is what I have done so far.</p>

<p>Old Code:</p>

<pre><code>protected void SearchButton_Click(object sender, EventArgs e)
  {
    string Selectedvalue = DropDownList.SelectedItem.Value;

<p>I'm trying to figure out how to integrate an accordion type of menu and a flyout menu together. Ideally, I'd like to have a vertical menu showing manufacturers that, when clicked, acts as an accordion to show Product Series for that manufacturer. When an individual Product Series is clicked, a flyout menu pops out to the side to show individual products in that series. </p>

<p>Has anyone seen any existing code like this or better yet, can anyone show me how to achieve this effect? Thanks in advance.</p>

<pre><code>
 Manufacturer 1 (drops product lines in accordion)

   Product Line 1

     Product 1 (flyout menu for products)
     Product 2

   Product Line 2

     Product 1
     Product 2

 Manufacturer 2
 etc...
</code></pre>

14649428 accordion menu with nested flyouts

<p>I am not sure if this is possible , this might look strange, but I am having nightmare implementing this,</p>

<p>I have a strange requirement where I need to pass a string that is 20000 characters wide. </p>

<p>Let me give a little background</p>

<p>I have a Dimension in the cube with an attribute called Product Line Code which might have 20000 unique values example(1-20000), the user wants to store all these values into a Report Filter table and get these values passed to SSRS Report which should in turn get passed to the MDX query to use as slicing criteria without any user intervention in the SSRS end.</p>

<p>Following is what I have done which is not a big deal I know
wrote a small function in SQL that reads the values from Report Filter table to create a set and return as one string like
{[Product].[Product Line].[Code].&[1],[Product].[Product Line].[Code].&[2],..............................,[Product].[Product Line].[Code].&[20000]}</p>

<p>when I call this function in SSRS Dataset, it returns a blank value though it works in SQL without a problem, I am doing the samething for other slices with relatively little size when compared to this one and they all work fine.</p>

<p>My question is how do I pass this big value string through SSRS parameter to use it as a slicer in MDX.</p>

<p>Is there any other option, has any one come across this kind of Scenario.</p>

<p>Appreciating your help</p>

<p>Thanks
Alex Sebas</p>

<p>I am trying to do the following, the user is filling an issue date and a due date on aspx page. These dates are in <code>yyyy/MM/dd</code> format saved in the database. </p>

<p>I would like to be able to send an email to the users before 3 days of the due date. </p>

<p>The methods I was able to find is either using a <code>Windows Service</code> or <code>SQL Job</code>, but the problem is that I am not able to wrap around the concept and get it working.</p>

<p>The confusing part is that I have to create a new Project for Windows Service, now I don't know if this is right but my approach was to connect to SQL Server and query the database with the issue and due date and then perform the calculation and store it in <code>resultdate</code>, if the <code>resultdate</code> equals to <code>Today's date</code> then send the email to the following users or else don't poll.</p>

<hr>

<p>EDIT:</p>

<p>I am trying to achieve the above by creating a <code>Stored Procedure</code>, which will be set in the <code>Windows Service</code>. Currently, I am struggling with the following: </p>

<p>I have a <code>MS SQL DB</code> that contains a <code>closing date</code> and the goal is to send an email to users whose emails are in another DB before <code>2 days</code> of the <code>closing date</code>.</p>

<p>Please see the following code, I am using <code>CURSOR FOR</code> but not sure how to use 2 set of commands to <code>SELECT</code> different DB, while the first <code>SELECT</code> is stored in some variables, and these variables retrieve the balance data from the other DB.</p>

<pre><code>USE ROG
DECLARE @Currentdate varchar(10), @DueDate varchar(10), @Serial_No int, @Product_Line varchar(50), @Email varchar(50)
SET @Currentdate = GETDATE()

DECLARE RFQDate CURSOR FOR

SELECT Serial_No, RFQ_Closing_Date, Product_Line FROM RFQDB WHERE DATEDIFF(day, GETDATE(), RFQ_Closing_Date) = 2

<p>Currently I'm working Cognos 10.1 report studio. </p>

<p>The requirement is that the output should be in such a way that the crosstab should appear in a default size in all the pages eventhough the outputs differ. The crosstab size should be same in all the pages but the font size could differ. </p>

<p>Eg:
Crosstab has the product line in row; product in column; revenue in diagonal. Page set has been applied for the crosstab based on the product line. i.e. Each product line would appear in a separate page.</p>

<hr>

<p>The number of products for each product line differs. The crosstab should be in same size in all the pages but the font size could differ.</p>

<hr>

<p>Please help me.</p>

15000903 How to control the report output in Cognos 10.1?

<p>I am not the greatest at writing SQL. I wrote this in Access and then went to SQL view.
Took both queries and did a union all between them. I keep getting a total from each query.
How do I get just one total for each product line.</p>

<pre><code>Results:
Prod Line   Period   Amount
Cash Discounts 12   -1404010.46
CASH DISCOUNTS 12   1541.19
Freight   12   4050823.43
Freight   12   6817.27
INK   12   -24467.76
INK   12   44414.29

Want
Cash discounts   -1402469.27
Freight   405764.70
INK   24467.76
</code></pre>

<p>SQL</p>

<pre><code>SELECT [JE Details].[Prod Line], [JE Details].Period, Sum([JE Details].Amount) AS
Amount
FROM [JE Details]
GROUP BY [JE Details].[Prod Line], [JE Details].Period
HAVING ((([JE Details].Period)=12))
UNION ALL
SELECT [AP Details].[Product Line], [AP Details].[Fiscal Period], Sum([AP Details].
[Invoice Amt]) AS Amount
FROM [AP Details]
GROUP BY [AP Details].[Product Line], [AP Details].[Fiscal Period]
HAVING ((([AP Details].[Fiscal Period])=12));
</code></pre>

15034184 I am looking for a union query to produce one total n

<p>I have a question regarding a problem I'm facing. Is there any way I can have a workflow waiting for another workflow to finish (or at least fire a couple of seconds after the first has executed)?</p>

<p>My scenario: I have a workflow waiting until 6 months before contractline expiry date, once it reaches that date, it creates a custom entity and on the cutom entity I have a plugin registerd which creates an opportunity and inserts, an opportunity product line (for the expired contract line).</p>

<p>Problem: The contract can have more than one contractline expiring at the same date, hence the workflow kicks off and creates multiple opportunties, adding each line in one opportunity, which shouldnt happen as I want all contract lines to end up in one opportunity. This doesn't happen too often, but I believe when the worflows execute at exectly the same time, I get this weird behaviour.</p>

<p>Any help would be much appreciated. Thanks.</p>

15413278 CRM Dynamics Workflow Waiting Conditions

<p>Background</p>

<p>I am trying to predict the sales for a product line (y_test in the sample at the end). Its sales for a timeperiod are based on all previous sales of another product (x_test) and how many of those previous sales are still being used. It is not possible to directly measure the number of those previously-sold products that are still in use though, so a survival curve needs to be inferred.</p>

<p>For instance, if you make accessories for a particular smartphone model, the accessory sales are at least partly based on the number of those smartphones still being used. (This is not homework, BTW.)</p>

<p>Details</p>

<p>I have some time series data and would like to fit a regression model using <code>glm</code> or something similar. The relationship between the dependent and independent variable is this:
<img src="https://i.stack.imgur.com/SVNZg.gif" alt="regression formula"></p>

<p>Where p is the time period, y_p is the dependent variable, x_p is the independent variable, c₀ and c₁ are the regression coefficients, F_t is a cumulative distribution function (such as <code>pgamma</code>), and e_p are the residuals.</p>

<p>Through the first three time periods, the function would expand to something like this:</p>

<pre><code>#y[1] = c0 + c1*(x[1]*(1-integrate(function(q) {pgamma(q, c2, c2/c3)}, 0, 1)$value))
#y[2] = c0 + c1*(x[1]*(1-integrate(function(q) {pgamma(q, c2, c2/c3)}, 1, 2)$value) + x[2]*(1-integrate(function(q) {pgamma(q, c2, c2/c3)}, 0, 1)$value))
#y[3] = c0 + c1*(x[1]*(1-integrate(function(q) {pgamma(q, c2, c2/c3)}, 2, 3)$value) + x[2]*(1-integrate(function(q) {pgamma(q, c2, c2/c3)}, 1, 2)$value) + x[3]*(1-integrate(function(q) {pgamma(q, c2, c2/c3)}, 0, 1)$value))
</code></pre>

<p>So, I have historical data for x_p and y_p, and I want to get the values for the coefficients/parameters c₀, c₁, c₂, and c₃ that minimize the residuals.</p>

<p>I think the solution is to use <code>glm</code> and create a custom family, but I'm not sure how to do that. I looked at the code for the <code>Gamma</code> family but didn't get very far. I have been able to do the optimization "manually" using

<p>We are working on two product lines that will share the same code. </p>

<p>For functionality that differs, I have both product lines implement the same interface (or base classes in some case) and these types will be created in the Main class (which is separate for both product lines) and passed further downstream.</p>

<p>For code that is deep inside the business logic, it is very hard to have product line specific code. We do not want to user if(ProductLine == "ProductLine1") and else methodology.</p>

<p>So I am planning to implement a Factory class which will have static methods to return NewObject1(), NewObject2() and so on. This Factory class will be registered in the Main class as Factory.RegisterClient(ProductLine1).</p>

<p>So with the above approach, the factory(which internally contains ProductLine1Factor & ProductLine2Factory) knows which type of objects to create.</p>

<p>Do you know a better approach to this problem. Please note that ProductLine1 was already existing and ProductLine2 is something new (but is 90% similar to ProductLine1). We cannot do drastic refactoring such that both product lines exist. We want to do as minimally invasive code changes as possible.</p>

<p>The factory approach typically exposes an interface, but the problem with interfaces is that I cannot expose static types which are also needed.</p>

<p>I would really appreciate if some experts would shed some light.</p>

15534118 2 Product lines sharing same code

<p>I am building a page to bring attention to available parts and accessories for a product line that is otherwise burried in my web site. The parts diagrams and check-out feature is always in the same spot on the main portion of my web site, so I have put the part I need to display in an iFrame, limiting what is viewable. However, there is a single part that continues to display, as it is designed to float to the right side of the display window. Since iFrame is now the display window, this floating button is in the way. The web site I am working on is at the following address.</p>

<p>http://www.snoscoot.com/fcaccessories/hondapowerequipment/test.html</p>

<p>Here's a link to a screenshot pointing out what I need to be able to make disappear: http://i1193.photobucket.com/albums/aa354/pbucket10/buttontohide.jpg</p>

<p>The pages that are going to be displayed in that iFrame always have the "div" class of "newsletter". Is there is a way to block certain a certain div "id" or "class" from being displayed within an iFrame? No worries about me stealing content or copyright enfringement, this is my web site (actually owned by the company I work for; I'm their web/code monkey). Any help would be greatly appreciated; I've been wrestling with this one for a couple days now.</p>

15574561

<div> blocker for iframe content

<p>Just started trying out Breeze today, long time EF user - think I found a bug in Breeze, but I may be doing something wrong - want to know which it is:</p>

<p>I have a simple hierarchy in EF Code First:</p>

```
<pre><code>// For testimonials about the product line in general
public class Testimonial
{
   public int Id { get; set; }

   public string Text { get; set; }
}

// For testimonials specific to a single product
[Table("ProductTestimonial")]
public class ProductTestimonial : Testimonial
{
   public Product Product { get; set; }
}
</code></pre>
```

<p>So just to be clear there's 2 tables here, Testimonial and ProductTestimonial, both have a PK of Id, and a Text field, and one of them also has an FK off to Product. This is just a simple way of implementing Table Per Type.</p>

<p>So I setup the BreezeController via WebApi:</p>

```
<pre><code>[BreezeController]
public class EFController : ApiController
{
   private readonly EFContextProvider&lt;EfDb&gt; _db = new EFContextProvider&lt;EfDb&gt;();

   [HttpGet]
   public string Metadata()
   {
      return _db.Metadata();
   }
</code></pre>
```

<p>And I go to load it in breeze.js:</p>

<p>My hope was, that engines would enable me to easily add or remove features in an app. However, whenever I see how engines are used, noone talks about disabling/uninstalling/unmounting them cleanly. How can I do this? </p>

<p>The case would be a product line of apps that are pretty similar. I would start developing the variant with most features and then work backwards by disabling features to get the other variants of the app.</p>

<p>I would like this to work a bit like aspects in AOP, where I can declare dependencies (in both directions), so that when I want to remove an aspect/engine, all code connected to that engine is removed/disabled. Whenever I try to do this with Rails engines, there has to be a lot of entangled, customized code (e.g. when using parts of the engine in views).</p>

15888226 How to easily remove Rails engines?

<p>How can I make the A line chart with a data table docked under the x-axis in dashboard like this.</p>

<p>http://www.advsofteng.com/gallery_line.html</p>

<p>The Chart Name is Product Line Global Revenue </p>

16076514 A line chart with a data table docked under the x-axis

<p>I have two lead forms created. One for Office Furniture Product Line and the other for Home Furniture Product line. Now, I've a field set as option type with values Office Furniture and Home Furniture. When the user chooses Home Furniture Lead Form, the form must be able to set Home Furniture as a static value and read-only. Similarly, If it is Office Furniture lead form, the Office Furniture must be set up as a static value read-only. In a way, We want to take away the editing capability for this field from the user. I'm facing a challenge here because the same field is referenced in both the forms. If I set Home Furniture as default value and make it read-only, the office furniture lead form also displays the same value. If anyone could help me with a script to assign 2 different values based on Lead form selection, it'd be a great help. </p>

16090153 CRM 2011 Set static values to same option set in two

<p>I've created a sub-grid in Contacts Entity to show related lead records for the contact. Due to the client requirement, We also have the functionality to create a new lead from contact entity through this sub-grid. Everything is fine till here. We have two lead forms created by each product line. Say Home Furniture Lead form and Office Furniture Lead form. I'm looking for an ability to set the Home furniture lead form as a default form to open from the sub-grid in contacts entity. </p>

<p>When the user clicks Add new lead from the sub-grid in contacts form, it should by default open Home Furniture form. If someone can suggest a way or a code to accomplish this, that would be great. </p>

16107663		How to set a default form from sub-grid

```
<p><a href="http://adamginther.com" rel="nofollow">http://adamginther.com</a></p>

<p>I currently have toggle activated for each piece work on my portfolio. I want to make it so
only one piece of work(with it's corresponding image) is displayed at a time. Right now, you can
click multiple images and multiple divs are displayed in the part where it says "you should check
out my work"</p>

<pre><code>&lt;section id="displays"&gt;
   &lt;div id="dragonupdisplay"&gt;
      &lt;p&gt;&lt;class id="blueText"&gt;You are viewing: DragonUp Wireframes &lt;/class&gt;
&lt;br&gt;Role: User Experience Design&lt;br&gt;&lt;br&gt;DragonUp is a game created by East
Side Games for iOS and it is currently being ported over to Facebook. It is a game that draws
inspiration from Dragonvale and Tiny Tower and has players building up a collection of dragons.
Kotaku describes it as A dragon vomit harvesting game, and that makes all the difference.
         &lt;br&gt;
         &lt;br&gt;
         I was tasked with proposing a re-design of its UI. Currently, the game has 10 different
options in the menu. With this in mind, my goal was to create a more streamlined menu for
new users and more fluid navigation for experienced players. I was able to achieve this and
accomplished having four different options in the menu while still containing the same
functionality and increasing usability.&lt;/p&gt;
         &lt;img src="images/work/dragonup-wireframe1.png"&gt;
   &lt;/div&gt;
   &lt;div id="provincedisplay"&gt;
      &lt;p&gt;&lt;class id="blueText"&gt;You are viewing: Province Sports Wireframes&lt;
/class&gt;&lt;br&gt;Role: User Experience Design&lt;br&gt;&lt;br&gt;The Province is B.C's most
successful newspaper. It is a source of news for almost everything going on locally and
internationally. A major component of The Province is their Sports section. With an increasing
number of people getting their newspaper delivered to them online I was tasked with
proposing a re-designed website.
         &lt;br&gt;
         &lt;br&gt;
         There was plenty of focus made on creating an experience that is custom tailored to it's
user and the sports and teams they enjoy reading about. Many new social features were
implemented around this to provide an experience that is unparalleled to any other website.
These features would instantly show users articles that they are interested in and show them
the most recent stats and scores going on with their teams.&lt;/p&gt;
         &lt;img src="images/work/provincesports.png"&gt;
   &lt;/div&gt;
   &lt;div id="canucksdisplay"&gt;
         &lt;p&gt;&lt;class id="blueText"&gt;You are viewing: Canucks Usability Tests&lt;
```

<p>I've got a list of about 200,000 plus records divided up by sub-product line which then rolls up to a product line.</p>

<p>For example: </p>

<p><img src="https://i.stack.imgur.com/bmxtw.png" alt="enter image description here"></p>

<p>(BTW, how do I actually show a table in my question?)</p>

<p>What I want is a where statement which will only include results that have ONLY Cable and/or Telephone in their Product Line. So for example, CT-23415 has both Laptops and Cable so it would be excluded from these results b/c while it has Telephone, it also has Laptops and I only want to see results with either Telephone, Cable, or a combination of the two. CT-12345 and CT-41567 then would be the only rows included.</p>

<p>Any ideas? </p>

16845696 SQL Where Only In

<p>I would like to make a request on a table for each product line but I have to control if the product id is existing in another table, if so then I have to have two values will cause can 'checked' or 'false'</p>

<p>in table product</p>

<pre><code>id name
1 abc
2 def
3 ghi
</code></pre>

<p>in another table</p>

<pre><code> id id_product id_catalogue
   1 2   1
   2 3   2
</code></pre>

<p>i need this result when ask width id_catalogue 1 for example</p>

<pre><code>id produt name   value   id_catalogue
 1   abc   false   null
 2   def   checked   1
 3   ghi   false   null
</code></pre>

<p>it must be in only one query</p>

<p>actually i have this, width my query who doesnt works nicelly</p>

<pre><code>id produt name   value   id_catalogue
 1   abc   false   null
 2   def   checked   1
 3   ghi   checked   null
</code></pre>

<p>thanks</p>

<pre><code>$this->datatables->select("frs.raison_sociale as fournisseur,f.titre as famille,
sf.titre as sous_famille,p.attribut as attribut,p.pa_centrale as prix_achat,p.marge_centrale as

<p>I am using Fixed Product Taxes (FPT) which we are calling a "Service Fee" to charge a $4 "Service Fee" for each item in the shopping cart. So if someone buys a quantity of 2, they are charged $8 extra.</p>

<p>This works great, but when I apply a "Promo Code" (Shopping Cart Price Rule) that should zero out the total for each item (including removal of the "Service fee"), it does not recalculate the Grand Total in the shopping cart, even though the discount appears and is calculated correctly. It seems like the recalculation is limited to the Product total, not the FPT amount.
</p>

<p>I cannot post an image, but here is what the cart shows:
Product Line Item: $22 ($18 + $4 FPT (we call it a "service fee"))
Subtotal: $22
Discount (PROMO): -$22
Grand Total: $4</p>

<p>The total should have been calculated to be $0, since $22 - $22 = 0.</p>

<p>I have already tried setting "Apply Discounts To FPT" to YES in System > Configuration > Sales > Tax > Fixed Product Taxes > Apply Discounts To FPT</p>

<p>The Shopping Cart Price Rule uses a "Fixed Price Discount" of $22, when the product matches the SKU. Any amount over $18 (the product base price without FTP) has the same affect actually.</p>

<p>I am using Magento Community 1.6.1.0.</p>

17220501 Incorrect Grand Total in Magento

<p>OK, I've found some close references to what I'm trying to do, but the examples given and the answers were either too simple for me to extrapolate from, or too complex for me to grasp. I'm not a professional DBA, just a poor network tech who has to write a report in Visual Studio 2012 for the Sales dept., so please be kind.</p>

<p>Basically, I need to write a query in the report designer that pulls from 2 tables - 'custextract' and 'histextract'. The result is 30 fields long (ALL of them needed in the report so I learned fast not to try and group in the query). </p>

<p>The final report has to create a "Customer Contact Page" for sales people to take to the field - one page per customer. The top portion is basic customer information and comes entirely from the customer table, and the lower portion is a table of sales history information (period-to-date, year-to-date, last-year, etc.) by product line. There are about 30 possible product lines but most customers only buy from a few. The report should only return the TOP (10) rows for EACH Customer ORDERED BY year-to-date DESC - if that makes sense. The query I have so far is:</p>

```
<pre><code>SELECT custextract.*, histextract.*
FROM custextract
INNER JOIN histextract
    ON custextract.[cusx-cust-no] = histextract.[hisx-cust]
WHERE (custextract.[cusx-ecall-select] = 'Y')
ORDER BY histextract.[hisx-sales-ytd] DESC
</code></pre>
```

<p>The obvious problem is that if I include TOP(10) in the SELECT, I get only the top 10 total, not per customer. I'm assuming I need to select a Count(histextract.[hisx-cust]) AS number and then do some kind of iterative loop based on number, joining all the results - but I'm totally lost how to effectively accomplish this. Select, From, Where, Order by, Into is basically the limits of my querying skill.</p>

<p>I am populating those two tables from extracts of an ISAM database coming over as .csv files using a stored procedure (I still haven't figured out how to trigger it, but that's later). Basically just a TRUNCATE and BULK INSERT operation. But, if it would make sense to create a third table to hold sorted and filtered data and use that update procedure to continue on and create the desired dataset (then just use that third table in Report Designer) I'm open to it - just don't know how.</p>

<p>Any help would be greatly appreciated. </p>

<p>I currently have an asp.net page in a TAB Container that has a search box for a material no attached via <code>SqlDataSource</code> on asp.net page, once you click the search button a <code>RadWindow</code> pops up with the <code>RadGrid</code> showing the details. </p>

<p>The <code>RadGrid</code> is in a <code>UpdatePanel</code>, once the Edit button is clicked inside the <code>RadGrid</code>, the edit window pops up, but when I try to select any of the <code>RadComboBox</code> such as Currency, Company, and Country there is no postback happening nor the postback gets triggered when I click the <code>Update</code> button in the edit mode.</p>

<p>The <code>RadComboBox</code> inside the <code>RadGrid</code> are attached by using the <code>EditItemTemplate</code>.</p>

<p>Please see the following code:</p>

<p><code>ASPX</code>code:</p>

<pre><code> <ajaxToolkit:TabPanel runat="server" HeaderText="TabPanel7" ID="TabPanel7" >
<HeaderTemplate>Edit/Delete PO Reports</HeaderTemplate>
<ContentTemplate>

opacity: 1;
font-size:small;
vertical-align: middle;
top: 45%;
position: fixed;
right: 45%;
color: #275721;
text-align: center;
background-color: White;
height: 100px;

<p>I have a series of files outlining different product builds, and each file is named with just the printer job number. What I would like to do is cycle through each such file in my folder, open it grab the product number, and rename the file with that string. The products would all begin with the same prefix, but the following digits are unique to each product. I've got it to the point where my macro prompts the user for that prefix, but I'm stumped as to how to search the .txt file for it, and then how to capture everything up to the next "space". Each product line begins with a different prefix, and may have a different number of following digits. It only needs to grab the first instance of the prefix, which so far has been line 3 -- but I don't want to limit it to only searching that line, as it may be different in the future.</p>

<p>Edit:
The pertinent info here is "2940UB200L". "2940" is the product line, given by the user, and the values following are unique to the assembly. However, there may be other products within the same product line listed below this header (I can't post that list). 100's of these Bills are in a folder, and each file is named with only the print job number. So far, I really only have code for a pop-up box requesting the product line prefix and a way to cycle through the folder. Everything else is bits and pieces that don't quite work together. In a given folder, everything SHOULD be from the same product line.</p>

<p>Sample text... Doesn't seem to be formatting the same in the preview as what I've pasted:
</p>

<p>PRODUCTION PLANT INDENTED BILL
PARENT ITEM NO. DESCRIPTION ROUND RING
2940UB200L ENGR DRAW 00000LM000/ZN31

  <p>Execution complete</p>
</blockquote>

<p>why i get this error?</p>

18031392 The WHERE clause function expects a tuple set expres

<p>Our software product line requires developing and maintaining multiple software versions concurrently. We are relative Git newbies and recently adopted Git Flow to take advantage of Driessen's branching model. We have a very small software team with few dedicated developers (we all wear many hats) and no "integration guru."</p>

<p>Much searching has turned up little specific advice on how to adapt Git and Git Flow to our needs. What has turned up is that Git Flow is not well suited to supporting multiple versions concurrently. One related discussion on SO has answers indicating separate branch names need to be used to track separate versions' histories. This, and related strategies, eliminates Git Flow unless it is modified; see our team limitations above for a reason why this isn't practical for us.</p>

<p>The key question is what have others found to be a good approach for implementing Driessen's branching model as closely as possible while supporting multiple release lines?</p>

<p>UPDATES:</p>

<p>Distilling the answers below (particularly @Rasmus') with more targeted searching and internal discussions on a few options leads to the following solution that we are implementing, and which I offer as one approach that may be relevant to similar teams under similar conditions.</p>

<p>We won't continue to use Git Flow. Instead, we will apply Driessen's model to each individual release line in a repo by prefacing each branch name with its intended release string, e.g.:</p>

<pre><code>r1.5/develop
</code></pre>

<p>All versions of a project are contained in the Git repository. Starting a new project version consists of creating a small set of new long-lived branches prefaced by the release string (e.g. <code>r1.6/develop</code> and, in our case, <code>r1.6/release</code>; no <code>master</code> with its implication of the single current good buildable state).</p>

<p>We establish one central public repository per project on a server that will be the main avenue for sharing code through local repo <code>remote</code> links. A push to this repository signifies code that is ready to be consumed by others. Merging <code>RX.Y/develop</code> into and then pushing the <code>RX.Y/release</code> branch signifies code that is intended for release. <code>feature</code>, <code>hotfix</code>, et. al. branches are handled similarly. The branch merge/commit history for a given release line is clean and

<p>I am new to programming and trying to implement bootstrap modal to display row data from a table into the modal window. I have tried the solution found on stackoverflow "Pull information from table to modal to edit" by Kylek. But could not able to display the particular row with the $row['SFID']. I can pull table data but when I click the edit button in front of any row it always show the last row id and doesn't display the data in the input box on the modal. Here I am till now, Please help me out.</p>

```
<pre><code>&lt;table class="table table-bordered" width="100%"&gt;
   &lt;thead&gt;
      &lt;tr&gt;
         &lt;th&gt;SFID&lt;/th&gt;
         &lt;th&gt;Company&lt;/th&gt;
         &lt;th&gt;Product&lt;/th&gt;
         &lt;th&gt;Product Line&lt;/th&gt;
         &lt;th&gt;Dealer Class&lt;/th&gt;
         &lt;th&gt;Status&lt;/th&gt;
      &lt;/tr&gt;
   &lt;/thead&gt;
   &lt;?php
      $query = "SELECT * FROM tblcustomer";
      $stmt = $db-&gt;prepare($query);
      $stmt-&gt;execute();

      foreach ($stmt as $row): ?&gt;
         &lt;tr&gt;
   &lt;?php $rowID = $row['SFID']; ?&gt;

            &lt;td&gt;&lt;?php echo $row['SFID']; ?&gt;&lt;/td&gt;
            &lt;td&gt;&lt;?php echo $row['CompanyName']; ?&gt;&lt;/td&gt;
            &lt;td&gt;&lt;?php echo $row['Product']; ?&gt;&lt;/td&gt;
            &lt;td&gt;&lt;?php echo $row['ProductLine']; ?&gt;&lt;/td&gt;
            &lt;td&gt;&lt;?php echo $row['DealerClass']; ?&gt;&lt;/td&gt;
            &lt;td&gt;&lt;?php echo $row['RequestStatus']; ?&gt;&lt;/td&gt;
            &lt;td style="text-align: center"&gt;
               &lt;div class="btn-toolbar"&gt;
                  &lt;div class="btn-group"&gt;
                     &lt;a class="btn btn-danger" href="#delModal"  data-toggle="modal"&gt;&lt;i
class="icon-trash icon-white"&gt;&lt;/i&gt; Delete&lt;/a&gt;

         &lt;?php echo "&lt;a class='btn update' href='#editModal' data-sfid='".$row['SFID']."'
role='button' data-toggle='modal'&gt;Edit&lt;/a&gt;"; ?&gt;
```

<p>I am currently developing a report using DynamicJasper. This is the first time I'm going to use this. I'm following several tutorial but I can't get my head around this problem. I have a column state which is grouped. This column can only have two values - state1 and state2. Basically, what I'm expecting is something like</p>

<pre><code>state1
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode

state2
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
branch   productline   columnItem   columnCode
</code></pre>

<p>But currently, what I'm having is</p>

<pre><code>state1
branch   productline   columnItem   columnCode

state2
branch   productline   columnItem   columnCode

state1
branch   productline   columnItem   columnCode

state2
branch   productline   columnItem   columnCode

...
</code></pre>

<p>Its like they are never grouped at all.</p>

<p>Here is my runnable code : </p>

<p>I have a database of order line items. Two of the columns are for controlling batch processing. They're called <code>prod_batch_id</code> (number) and <code>prod_batch_index</code> (varchar2 - 10 byte). They both need to be either null or filled, and <code>prod_batch_index</code> has a unique index on it. To fetch unbatched orders we simply pull all records where <code>prod_batch_id</code> is null.</p>

<p>The table (<code>ord_lin</code>) has 171,602 records that pertain to a particular product line that I'm about to start batching. Rather than limit my batching queries by the date that we start I'd like to add all of those records to a dummy batch.</p>

<p>I'm not well versed in Oracle, or even SQL, so I don't know if it's possible but would there be a way to temporarily disable the unique constraint for the update, and then enable it again without it complaining about those records?</p>

<p>If that's not an option, how would I go about creating the unique values for each record during the update?</p>

<p>Notes: The batch system was originally made for a whole new product line and was designed this way because those products didn't exist before batching did. I will likely have several other product lines that will get switched to the batching system down the line, so I'll be back to this point again sooner or later.</p>

<p>I'm also aware that I could do things like make another field to act as a "batched" flag that doesn't have such constraints, but that would involve updating a lot of programs.</p>

18456036

Bypass or fulfill unique constraint for large update

<p>I have a dimension table called <code>Product_Dim</code></p>

<pre><code>Create Table Product_Dim
(
Product_ID INT primary key,
Product_Line CHAR(20),
Product_Category CHAR(25),
Product_Group CHAR(25),
Product_Name CHAR(45),
Supplier_Country CHAR(2),
Supplier_Name CHAR(30),
Supplier_ID INT
)
</code></pre>

<p>and two source tables <code>Supplier</code> and <code>Product_List</code></p>

<p>Product_list is as follow :</p>

<pre><code>Product_ID
Product_Name
Supplier_ID
Product_Level
Product_Ref_ID
</code></pre>

<p>where Product_Level has the values (1,2,3,4)</p>

<p>1 means it is a product
2 means it is a product group
3 means it is a product category
4 means it is a product line</p>

<p>so in order to fill my <code>Product_Dim</code> table
I did drag 4 times <code>Product_list</code> (Changing the query accordingly to
<code>Product_level</code>)
and one supplier</p>

<p>so for the join i do the following :</p>

<pre><code> product_list.Product_Name => PRoduct_Name

<p>I'm using woocommerce product categories shortcode
[product_categories] and would like to have pagination, </p>

<p>because I'm displaying categories on product line page - and currently only 4 categories are being displayed. </p>

<p>I have added this short code also <code>[product_categories per_page="4" columns="4"]
</code>. But it displaying only 4 categories. but no pagination displayed. I have tried
WP-PageNavi plugin and added below code in my themes functions.php</p>

```
<pre><code>remove_action('woocommerce_pagination', 'woocommerce_pagination', 10);
function woocommerce_pagination() {
   wp_pagenavi();
}
add_action( 'woocommerce_pagination', 'woocommerce_pagination', 10);
</code></pre>
```

<p>It is not worked.Is there a way to add pagination in woocommerce?</p>

18585747 woocommerce product categories shortcode paginati

<p>I've created a magento (1.7 CE) local module to add, in the Admin section, some info to the product list displayed in the Orders received.
Internally all seems to work good except that i'm not succeeding in replacing the template used to render each product line in the order.</p>

<p>In app/design/adminhtml/default/default/layout/sales.xml i have this code</p>

<pre><code><adminhtml_sales_order_view>
<reference name="head">
<action method="addJs"><file>mage/adminhtml/giftmessage.js</file></action>
<action method="addJs"><file>mage/adminhtml/giftoptions/tooltip.js</file></action>
</reference>
<reference name="content">
<block type="adminhtml/sales_order_view" name="sales_order_edit"></block>
</reference>
<reference name="left">
<block type="adminhtml/sales_order_view_tabs" name="sales_order_tabs">
<block type="adminhtml/sales_order_view_tab_info" name="order_tab_info" template="sales/order/view/tab/info.phtml">
<block type="adminhtml/sales_order_view_messages" name="order_messages"></block>
<block type="adminhtml/sales_order_view_info" name="order_info" template="sales/order/view/info.phtml"></block>
<block type="adminhtml/sales_order_view_items" name="order_items" template="sales/order/view/items.phtml">
<action method="addItemRender"><type>default</type><block>adminhtml/sales_order_view_items_renderer_default</block><template>sales/order/view/items/renderer/default.phtml</template></action>
<...
</code></pre>

<p>I would like to replace the template set by the LAST line you see (the addItemRenderer).
</p>

<p>In my module config.xml i have</p>

<pre><code><adminhtml>
<layout>

<p>I am having a strange problem. I have an .htaccess file that will work only if I make these these bottom two conditions/rewrites different folders. I would like both the products.php and specs.php pages to show: www.example.com/products/ followed by their respective slugs for pretty URLs. As it stands now I can only get this to (kinda) work if I have different folder names. Products.php shows a brief description of a number of products in a category (After domain it would show /candy). The specs pages shows only one product (After domain it shows product line and product name candy/sweethearts). Any help would be greatly appreciated!</p>

```
<pre><code>Options +FollowSymLinks -MultiViews
# Turn mod_rewrite on

<p>I wanna build a Shopping Cart to submit enquiry about the products and to buy the product. Each of the products will have varying levels of categories. </p>

<p>Examples
1. Brand > Product Line > Category 1 > Category 2 > Product
2. Brand > Product Line > Category 1 > Product
3. Brand > Product Line > Product</p>

<p>Now the user has to be able to add the products from various brands to a shopping cart and submit for price enquiry with their contact details.</p>

<p>Is there any Ready made CMS avaiable that i can use to get a shorter turn around time for such an application. </p>

<p>I would love to use wordpress or cakephp to build the same.</p>

18757450 Shopping Cart with just Enquiry

<p>I have a web app that we're still stuck in asp.net 2.5 with. We've started using some newer technology with our front end, including loading some of our data into JSON objects and passing them around the application using localStorage. It's working really great.</p>

<p>In the future we're going to change our ASP.NET web form architecture into ah HTML5/JQuery front and Web API back end. So we're trying to write for that future while still being constrained to our old web form post backs and business objects. So right now we're posting from our search form to our search result page web form and we'll be calling a method from our business object to grab and return search results.</p>

<p>The criteria object we pass in has 20 or so values and a couple of collections (product line ID's, category ID's, etc..). So it's a slightly complicated object. In the old form we grabbed values from the controls, validated them, and passed them in using the asp.net controls, it was a single form solution. Our new solution has a search form and a results page. We're passing our values from form to form in a JSON object in internal storage. I can't really get to that from server side so I also stashed the values in a hidden field on the form that I can grab on the server side when I POST to the results page (eventually we'll call an API from the new form using ajax).   So now that I can see the data, how do I parse and work with a JSON object in the code behind of asp.net. I need to load the 20 or so search criteria values and iterate through the ID collections (Guid and int) to load them into the same criteria object. This object is then passed in as the search methods parameter and search results will come back. Not sure how to manipulate the json on the server side.</p>

18860906 Accessing JSON on server side (asp.net)

<p>I am trying to make webpage with image that have products in the center. but the product gets cut off and i have to scroll down to see the whole image.</p>

<p>How can you make it load so the image is center? </p>

<p>in the body</p>

<pre><code><img alt="The Argan Tree Product Line" src="images/products2.jpg" id="
bgimage" class="mainimage"/>
</code></pre>

<p>css for element</p>

<pre><code>#bgimage{
 z-index: -999;
 width: auto;
 height: 100%;
 top: 0;
 left: 0;
 position: relative;
min-width:960px;
min-height:720px;
}
</code></pre>

<p>I am using this jquery to make the image change size when browser is different sizes</p>

<pre><code>$(document).ready(function()
{
 if ($(document).height() < (.75 * $(document).width())){
 var wide = $(document).width();
 if (wide>960){
 $("#bgimage").css("min-width", wide + "px");
 var high = .75 * $(document).width();
 $("#bgimage").css("min-height", high + "px");
 $("#content-wrapper").css("width", wide +"px");
 $("#content-wrapper").css("height", high +"px");
 }
 }

 if ($(document).height() >= (.75 * $(document).width())){
 var high = $(document).height();

<p>We recently adopted the concept of feature branches in one of our bigger projects, to segregate work on different aspects of the product that can be completed independently of each other.</p>

<p>For each so-called feature, we are creating the following:</p>

a branch from 'main', aptly named after what the feature is supposed to be
a new team in the project portal, containing the people that will work on the feature
a build definition to validate check-ins against the source on the branch

<p>The main point I would like to see discussed here is about the build definition. Currently, each one of them is set to gated checkins.</p>

<p>The question then, is: what is the best practice on associating work items to a build? </p>

<p>In our case, these feature branches are supposed to be disposable: we would like to be able to delete these builds/branches/teams later on when the feature is complete, but still be able to track them throughout the product lifecycle.</p>

<p>If I associate work items with these temporary builds, I'll lose tracking capability later on when the feature implementation ends. At the same time, I just found out that gated checkins always associate work items, regardless of what is configured in the build definition.</p>

<p>Would it be feasible to disable work item integration with the feature branches (in this case also converting them from gated to continuous integration) and enable it in the main build, so that these features can be tracked in the main product line? Or maybe this should be only enabled for Release build definitions, so that we can find out what was integrated on a certain release? For those of you who follow the sprint/feature concept, how do you handle this situation? Do you also have a build for each branch?</p>

<p>Update:</p>

<p>I just found something similar (but not exactly like what I wanted) in this question. The answer there lead me to <a href="http://geekswithblogs.net/jakob/archive/2011/05/17/automatically-merging-work-items-in-tfs-2010.aspx" rel="nofollow">a plugin that automatically associates work items on

<p>I have been using Magmi to import products by adding items to the file "
export_all_products.csv" without any problems
But when I have products that need to be remove,what I did was by removing the whole row in that product line in the csv file and upload it using magmi, but the products that I want to delete is still there and sometimes duplicated, is there a way to get it done or can I empty some tables in the database in phpmyadmin before I do the import?</p>

<p>Thanks so much</p>

19333400		Magmi import doesn't remove the products

<p>I'm evaluating tools that helps to manage branch for my team. We are working on a commercial product, so the tools must be chosen carefully to handle multiple releases, potential hotfix on older versions, etc.</p>

<p>Basically, what I want is to reach what git-flow allows.</p>

<p>But because we are already using TFS (2012 today, but 2013 upgrade in the pipe) with Visual Studio 2012 (but we didn't use branches before), I'd like to "stick" to a full MS product line.</p>

<p>Then I was looking for guidance, and I found this software. I've seen the short webcast Quick tour of the TFS Branch Tool VS Extension on channel9 that demonstrate the tool. But it only covers the creation of the initial structure. What about day to day work?</p>

<p>Let's say I've finished working on a feature or a hotfix. How can I guide the developer to merge to the correct branch? How can I have a easy to read view of the work?</p>

<p>The tools said "automate branching task in the ALM Rangers branching guidance"... but I don't see any menu that can do that. The only thing I see is the "Create initial structure" menu.</p>

<p>Did I miss something? Is there any other resource that can help me?</p>

<p>I like GIT... I believe in its strong branching features. But I feel the git experience in VS 2012 is terrible... so I'd like to give a chance to TFS.</p>

<p>As my team (including me) is not mature in managing branching, I must keep things as easy as possible, so any advise is welcome.</p>

19445074 I don't understand the usage of the TFS branching toc

<p>Is there a more efficient query than the following </p>

<pre><code>DT[, list(length(unique(OrderNo))),customerID]
</code></pre>

<p>to refine a LONG format table with customer id's, order number and product line items, meaning that there will be duplicate rows with the same order id if a customer has purchased more than 1 item in that transaction. </p>

<p>Trying to work out unique purchases. <code>length()</code> gives a count of all order id's by customer ID including duplicates, looking for just the unique number. </p>

<h1>Edit from here:</h1>

<p>Here is some dummy code. Ideally what i am looking for is the output from the first query using the <code>unique()</code>. </p>

<pre><code>df <- data.frame(
customerID=as.factor(c(rep("A",3),rep("B",4))),
product=as.factor(c(rep("widget",2),rep("otherstuff",5))),
orderID=as.factor(c("xyz","xyz","abd","qwe","rty","yui","poi")),
OrderDate=as.Date(c("2013-07-01","2013-07-01","2013-07-03","2013-06-01","2013-06-02","2013-06-03","2013-07-01"))
)

DT.eg <- as.data.table(df)
#Gives unique order counts
DT.eg[, list(orderlength = length(unique(orderID))),customerID]
#Gives counts of all orders by customer
DT.eg[,.SD, keyby=list(orderID, customerID)][, .N, by=customerID]

^
|
This should be .N, not .SD ~ R.S.
</code></pre>

19555310 efficient use of R data.table and unique()

<p>I'm attempting to make a script on my own that would be beneficial for technicians/salesmen in the field. There are three products that make up this product line. But the only difference between these products are the sizes. Each size contains a certain amount of brackets required to mount them. For the small, only one is necessary. For the medium, two. And for the large, four. </p>

<p>I want my script to issue a prompt asking the user for how many of each type of product, as any installation can have any amount of a mixture of these product sizes. (sorry if this is confusing, but hopefully my code below will help explain better.) I would ideally like this script to take the amount of each product size needed, add them up and spit out the total amounts of brackets required for the installation. Right now, I cannot figure out how badly I am butchering this code as I am new to programming.</p>

<p>Please review the code below and any help and/or suggestions is greatly appreciated.</p>

```
<pre><code>function (t)
   local t = {}
   a,b = i,brackets
   io.write ("Enter Total Number of Small Products")
   answer = io.read()
   if answer then
      brackets = table.insert (t,#t+1,(answer * 1))
   end
   io.write ("Enter Total Number of Medium Products")
   answer = io.read()
   if answer then
      brackets = table.insert (t,#t+1,(answer * 2))
   end
   io.write ("Enter Total Number of Large Products")
   answer = io.read()
   if answer then
      brackets = table.insert (t,#t+1,(answer * 4))
   end
   local sum = 0
   for i,brackets in ipairs (t) do
      sum = sum + brackets
   end
   print (sum)
end
</code></pre>
```

<p>I have two tables</p>

<p>Prodline</p>

<p>Prodline_nbr</p>

<p>Prodline_name</p>

<p>prodline_color_code</p>

<p>prodline_discount</p>

<p>product</p>

<p>prod_nbr</p>

<p>prod_name</p>

<p>prod_price</p>

<p>prod_cost</p>

<p>i want to list name for each product, sale price, product line name, and color code for products whose price is no more than $200 and sort them descending order by sale price.</p>

<p>Here is my code</p>

<pre><code>select PRODLINE_NAME,PRODLINE_COLOR_CODE,PROD_NAME, PROD_PRICE
from prodline, product
where PRODLINE_NBR in (select PRODLINE_NBR from prodline)
and prod_price<=200
order by PROD_PRICE desc;
</code></pre>

<p>Is this not correct? I've been told there is a better way by using some sorta join?</p>

<p>second attempt</p>

<pre><code>select PRODLINE_NAME,PRODLINE_COLOR_CODE,PROD_NAME, PROD_PRICE
from prodline, product
where PRODLINE_NBR = PROD_NBR
and prod_price<=200

<p>I am having a problem in passing entered data from the edit view to a createPDF view. I first thought about using virtual fields, but I have read somewhere that creating virtual fields on the fly is not good cake practice.
I have a Model Delivery that belongsTo Project. On the edit view of Delivery, I am pulling the related data from Project to pass it to the createPDF view to populate fields on a PDF that gets generated using TCPDF. Users have to type in the product description, quantity of product and asset number on the edit page, these fields do not have to be saved to the database, I just need to pass them from the form to the function that creates the PDF. Due to the fact that the number of products will vary drastically from Delivery to Delivery (anywhere between 2 - 100), I want the user to dynamically add the product line on the fly to the form, i.e. if product line 1 has been populated, automatically add product line 2.
After a bit of looking, I found this, which is what I want to do, but not not using database fields, just passing the entered values to another function in an array, like </p>

<pre><code>array(
key_1 => array(
qty => '1',
description => 'Blah',
assetNo => '11te';
),
key_2 => array(
qty => '5',
description => 'Blah',
assetNo => 'sdvvs';
)) etc...
</code></pre>

<p>Anyone got a clue as to how I might go about this?</p>

20116417 Dynamic vitual fields? Or pass array from one view to

```
<p>Okay. So I have a list that goes like this (basically)
A) Mnfctr a
  a) Product Line
B) Mnfctr b
  b) Product line
I want the list to expand and collapse because the page is unnecessarily big to accommodate
the height. Here is my code</p>

<pre><code>    &lt;script type="text/javascript"&gt;
    function toggle(id) {

    ul = "ul_" + id;
    img = "img_" + id;
    ulElement = document.getElementById(ul);
    imgElement = document.getElementById(img);
    if (ulElement){
        if (ulElement.className == 'closed'){
                ulElement.className = "open";
                imgElement.src = "images/opened.gif";
                }
                else{
                ulElement.className = "closed";

<p>Hello i am currently using WordPress to build a brand site however i have run in a slight problem. The problem is that i am using two pages to differentiates the products as such Product line 1 / Product line 2 and those two pages are empty so when i open the page of a specific product the breadcrumbs show Home-Random Page-Product line 1-product 1 and the link in the breadcrumbs for product line 1 is active i want to somehow remove the link for Product line 1 and Product line 2 but they still should show in the breadcrumbs. I hope i made myself clear my English is not very good so if you need me to clear something up ask, thanks in advance</p>

20608042 Make a Parent page not linked in breadcrumbs

<p>I'm getting now infrequently an error when creating a Google Chart within Google App Script. </p>

<p>The code bellow creates a blob, but, in 25% of the time, the image contains a banner with this error:</p>

```
<pre><code>'undefined' is not a function (evaluating 'b.G()')
</code></pre>
```

<p>I'm familiar with this error in the JS/HTML world, and it usually indicates that the data was not loaded at the time the chart object was created.</p>

<p>The App Script code is as follow and run correctly in roughly 75% of the time:</p>

```
<pre><code>  // Get data for chart
  var dataTable = SpreadsheetApp.getActiveSpreadsheet()
     .getSheetByName("Chart_Data")
     .getRange("A1:F91")
     .getDataTable(true);

  // Wait 3 seconds and flush any activity
  Utilities.sleep(3000);
  SpreadsheetApp.flush();

  // Test if data object is empty
  if (dataTable==null) {
    Logger.log("Error, dataTable is null");
  }

  // Create Line Chart Builder
  var lineChart = Charts.newLineChart()
    .setTitle('Weekly Activations by product line (7 days rolling)')
    .setLegendPosition(Charts.Position.RIGHT)
    .setDimensions(600, 400)
    .setDataTable(dataTable)
    .setColors(["blue","DarkGreen","DarkRed","#eec","#cee"]);

  // Wait 3 seconds and flush any activity
  Utilities.sleep(3000);
  SpreadsheetApp.flush();
```

<p>I have a requirement of comparing Product line (attribute) and Brand (Attribute) using 3 different selectors. Product line and Brand is having one to one relationship .</p>

<p>My dashboard should look like below.(sorry I cant attach the snapshot)</p>

<p>Prod line (selector) Brand(selector)</p>

<p>Prod line (selector) Brand(selector)</p>

<p>Prod line (selector) Brand(selector)</p>

<p>These selectors should be only dropdown type.</p>

<p>User will select a particular product line and can compare it with a particular brand at a time.</p>

<p>I created 3 selectors with the same attributes , but it is not working.
Please help me with the above scenario ASAP. We suggested the checkbox type selector but the client requirement is only dropdown</p>

20676052 Microstrategy - Creating 3 selectors on the same attri

<p>I am building a web app using shiny, and I'm unsure how to best structure the app since inputs depend on data and the outputs (charts) depend on aggregated data based on inputs. </p>

<p>I tried to come up with a simple application to reproduce the problem. My setup is more advanced and unrelated to the example. Suppose you have a product line and want to analyse sales. Suppose that a data set is created for each day (I'm not saying the data structure is optimal, but it is useful for illustrating my question). Now in the application, one selects a date from a list of available dates, and then one selects a product. The dates are restricted to the period for which data is available, and the product list is restricted to products that were actually sold on the selected day. Then, we wish to plot the total sales value for each hour during the day.</p>

<p>I will list some code for such an example below, where some sample data is also created. Sorry for the "long" code. It is sort of working, but I have some concerns.</p>

<p>My questions are:</p>

<p>1) I am wondering in which order things are executed, in particular when the app is first loaded, and then every time an input changes. Again, data depends on first input, the second input depends on the data. Third, a chart-friendly data set is computed which is used for the graph. You may notice that errors are printed to the console (and flashes briefly in the browser) but as the values are available, updates are made and the plot shows. It seems suboptimal.</p>

<p>2) What is the current best practice when the inputs depend on data/server.R? I saw this https://groups.google.com/forum/?fromgroups=#!topic/shiny-discuss/JGJx5A3Ge-A but it seems like this is not implemented, even thought the post is rather old.</p>

<p>Here is the code for the two files:</p>

```
<pre><code># ui.R
######

library(shiny)

shinyUI(pageWithSidebar(

  headerPanel("New Application"),

  sidebarPanel(
```

<p>I am currently trying to apply some conditional formatting to a report that will allow me to hide a chart when there is no data available. like here</p>

<p>The problem I have is that several charts are built off a single data set and filters are applied within the chart properties to set the content. In some cases these filters will cause the chart to have no data (e.g. if a store doesn't stock that product line).</p>

<p>I have tried the method I mentioned above, however I think that because my dataset does have data for the store (just not a specific product line) it doesn't hide the chart.</p>

<p>Any assistance would be greatly appreciated.</p>

<p>Dan</p>

<p>I have the following javascript code I use with casperjs to iterate some links and return some data in json format. </p>

<p>Here is my snippet</p>

```
<pre><code>casper.each(links, function (self, link) {

this.thenOpen(link, function () {
  //get work order info
  var town_selector = 'div tr';
  var town_names_info = this.getElementsInfo(town_selector);
  var town_names = [];
  for (var i = 0; i &lt; town_names_info.length; i++) {
    town_names.push(town_names_info[i].text.trim().replace(/\n\s+\n/, ''));
  }
  var jsonTest = arrayToObject(town_names);
  json.push(JSON.stringify(jsonTest));
  casper.capture('./images/workOrder' + workOrder + '.png');
  workOrder++
  utils.dump(jsonTest);
  array.push(jsonTest);
  casper.thenClick(x('/html/body/table[2]/tbody/tr/td[2]/a[2]'), function () {
    //more some stuff here
    someLinks = this.evaluate(getLinks);

    for (var i = 0; i &lt; someLinks.length; i++) {
      someLinks[i] = "https://somelink" + someLinks[i];
    }
    casper.each(someLinks, function (self, link) {
      self.thenOpen(link, function () {
        var selector = 'div tr';
        var names_info = this.getElementsInfo(town_selector);
        var names = [];
        for (var i = 0; i &lt; names_info.length; i++) {
          names.push(names_info[i].text.trim().replace(/\n\s+\n/, ''));
        }
        var jsonTest = arrayToObject(names);
        json.push(JSON.stringify(jsonTest));
        utils.dump(jsonTest);
        array.push(jsonTest);
        fs.write('results.json', JSON.stringify(array), 'w');
```

<p>In my View I have to put several render partial pages to dynamically add rows in a table (eg. product line in an invoice)</p>

<p>To add the first table I have followed:
http://blog.stevensanderson.com/2010/01/28/editing-a-variable-length-list-aspnet-mvc-2-style/</p>

<p>I have followed the instructions in the link but my main view looks like this: </p>

<pre><code><table id="editorRows" style="width: 100%;">
 <tr>
  <th>Column1</th>
  <th>Column2</th>
  <th>Column3</th>
 </tr>

 @foreach (var item in Model.Entity.ListPlans)
 {
 Html.RenderPartial("PlanEditorRow", item);
 }

</table>
<i>@Html.ActionLink("Add another plan...", "BlankPlanEditorRow", null, new { id = "addItem" })</i>
</code></pre>

<p>The partial view (PlanEditorRow) is:</p>

<pre><code>@model Project.Models.Plan
@using Project.Helpers

<tr class="editorRow">
@using (Html.BeginCollectionItem("assignedPlans"))
{

  <td>
   @Html.EditorFor(x => x.Data1)
  </td>
  <td>
   @Html.EditorFor(x => x.Data2)
  </td>

<p>I have a knockout application where an Estimate is the main object for the page. The estimate contains an observableArray of WorkOrder objects (WorkOrdersDTO), but only one WorkOrder object is shown for editing at a time. The user is able to choose which WorkOrder is shown for editing by choosing from a select list. The problem that I am having is that I am using an object named CurrentWorkOrder to reference the WorkOrder that is currently being edited. I am running into some performance issues when this object is being set. The more WorkOrders that the estimate contains, the worse these performance issues become. The biggest issue arises when the user adds a WorkOrder. This is the code for that process:</p>

```
<pre><code>self.addWorkOrder = function () {
    tempWOId += 1;
    var workOrder = new WorkOrder();
    workOrder.WorkOrderId(tempWOId);
    workOrder.WorkOrderNo(self.SetWorkOrderNo());
    self.estimate().WorkOrdersDTO.push(workOrder);
    self.estimate().CurrentWorkOrder($.grep(self.estimate().WorkOrdersDTO(), function (wo) {
return wo == workOrder })[0]);
};
</code></pre>
```

<p>The final line in that function is the one that takes the most time. I have tried also using this but it is even slower.</p>

```
<pre><code>self.estimate().CurrentWorkOrder(self.estimate().WorkOrdersDTO()[self.
estimate().WorkOrdersDTO().length - 1]);
</code></pre>
```

<p>I have also taken out the 'with' bindings in my html, but have not seen any results from that. I even commented out the entire html where the bindings where taking place to make sure the performance issues were not cause by that and there was no change in performance. </p>

<p>Any ideas?</p>

<p>I went back and timed that line of code with several different ways and here are the results: CurrentWorkOrder($.grep) - 613.000ms </p>

<p>CurrentWorkOrder(WorkOrdersDTO.length) - 740.000ms </p>

<p>CurrentWorkOrder(workOrder) - 689.000ms </p>

<p>I want to share the JRE of my main application with add-ons which will be installed using a separate installer. Main application an add-ons belong to the same product line. The JRE should be shared among all products of this line but not with other products. </p>

<p>Is it possible to define the path of the shared JRE instead of using "...\common files\i4j_jres"?</p>

<p>I'd like to use something like </p>

<p>"...\common files\my company\product line1\jre"
and
"...\common files\my company\product line2\jre"</p>

21752456 How to change the location of a shared JRE in install4

<p>I have a <code>@miniatures</code> model and a <code>@lines</code> model joined via a <code>@minilines</code> model.</p>

<p>In the <code>@miniature show view</code> I have this link</p>

<pre><code><%= link_to "Add to product line", new_miniline_path(:miniature_id => @miniature) %>
</code></pre>

<p>To a <code>New @miniline form</code> that takes the <code>:miniature_id</code> from a hidden field like so</p>

<pre><code><%= f.hidden_field :miniature_id, :value => @miniature.id %>
</code></pre>

<p>And then you select the desired <code>@line</code> from a dropdown.</p>

<p>This all works. What I can't get to work is for the controller to redirect a user back to the originating <code>@miniature</code> after the create action works.</p>

<p>This is what I have in my <code>new</code> and <code>create</code> actions in the controller</p>

<pre><code>def new
```
    @miniline = Miniline.new(@miniature)
    @miniature = Miniature.find(params[:miniature_id])
    @lines = Line.all
  end

  def create
    @miniline = Miniline.new(miniline_params)
    if @miniline.save
      flash[:success] = "Miniature added to product line"
      redirect_to miniature_path(@miniature)
    else
      flash[:success] = "Did not work!!!"
      render 'new'
    end
  end
```
</code></pre>

<p>I'm trying to setup a delete link for a join table entry.</p>

<p>I have a <code>@miniatures</code> model which has_many <code>@lines</code> through the <code>@minilines</code> join table.</p>

<p>On my <code>@miniatures</code> show page I call the associated <code>@lines</code> with </p>

<pre><code><% @miniature.lines.each do |line| %>
   <%= link_to line.name, line %>
<% end %>
</code></pre>

<p>That all works fine. All associations correct etc. What I'm trying to do is add a little delete link. It's currently as follows</p>

<pre><code><% @miniature.lines.each do |line| %>
   <%= link_to line.name, line %>
  <%= link_to '<i class="fa fa-times"></i>'.html_safe, miniline_path(:miniature_id => @miniature.id, :line_id => line.id),
         :confirm => 'Are you sure?', :method => :delete %>
<% end %>
</code></pre>

<p>In my mini lines_controller I have the following destroy action</p>

<pre><code>def destroy
   Miniline.find_by_miniature_id_and_line_id(params[:miniature_id, :line_id]).destroy
   flash[:success] = "Miniature removed from product line."
   redirect_to :back
end
</code></pre>

<p>It's currently returning <code>wrong number of arguments (2 for 1)</code>.</p>

21861814

Delete a join table entry from associated model

<p>We have a custom content slider, made up of an unordered list. There is a function controlling the slide of the content, and then we've also got a function that creates pager buttons on the fly, which allows the user to click back and fourth between the slides, labeled with numbers 1-6. </p>

<p>I'm trying to randomize the order of the content slides, so that the same combination of slides doesn't appear everytime the page is loaded, however the pager still retains the order it animates in. </p>

<p>The functions are here: </p>

```
<pre><code>/**
 * Prepare a rotator
 * @return null
 */
(function($)
{
   $.fn.prepRotator = function()
   {
      return this.each(function()
      {
         // Set the navigation
         var count = $(this).children().length;
      for (i = 1; i &lt;= count; i++)
         {
            $(this).siblings('#rotatorNavigation').append("&lt;a href='#'      name='" + i + "'&gt;" + i
+ "&lt;/a&gt;");
         $(this).children(':eq(' + (i-1) + ')').attr('name', i);
      }
      $(this).children().preload();
      $(this).siblings('#rotatorNavigation').find('a:first').addClass('active');

      // Set the rotation
      function rotate()
      {

         if ($('.rotator li.active').next('li').length &gt; 0)
            $('.rotator li.active').next('li').showRotatorItem();
         else
            $('.rotator li:first').showRotatorItem();
         globalRotatorTimeout = setTimeout(function(){rotate();}, 5000);
```

<p>I am trying to make a script where you can enter a product name, quantity, price and tax %.
This then calculates the total cost per product and the overall total.
The only problem is I am adding new form fields each time a new product has to be added.</p>

<p>Now my question: what is the best way to calculate the total price per product and the overall total? </p>

<p>Here is what I have so far but I'm pretty stuck since I'm new to javascript. It also saves the fields to mysql which all works fine, I'm just stuck on the total price per product and overall total.</p>

<p>Thanks in advance!</p>

<pre><code>   <form method="post">
    <div id="itemRows">

product: <input type="text" name="add_product" />
amount:<input type="text" id="value1" name="add_qty" size="4" onChange="output();"
/>
price:<input type="text" id="value2" name="add_price" onChange="output();"/>
<select type="text" name="add_tax" onChange="output();">
  <option value="21">21%</option>
  <option value="6">6%</option>
  <option value="0">0%</option>
</select>

 <input onClick="addRow(this.form); output()" type="button" value="Save product line..."
/>

    </div>

    <p><input type="submit" name="ok" value="Save Changes"></p>
    </form>

<p>I've been research the relative performance of ARM parts, and have found it difficult to come up with comparisons... especially for the new A12, A17 and the 64 bit A53 an A57s;</p>

<p>What I've come up with so far, based on Linpack scores of different phone/tablets is this:
</p>

A9 = 32 MFLOPS/Core/GHz
A15 = 100 MFLOPS/Core/GHz
Apple A7 = 350 MFLOPS /Core/GHz (!)

<p>So a couple questions arise:</p>

Where does the A12, A17, A53, A57 fit into this spectrum
Why is Apple's A7 floating point so good? It is purely due to the 64bit internals, or something else?

22217790 What ARM Floating Point Performance Comparison a

<p>How can I create a underline that fills up the white space between the end of a text line and the end of a DIV's width.</p>

<p>I'm trying the following:</p>

<p>I want the product line to break when the screen gets smaller. I want the price to stay lined out to the right and be underlined. The white space between the last word (Mayo) and the price must automatically be filled with a underline.</p>

<p>Big screen:
Old Cheese – Salad, Avocado, Egg, Herbal Mayo......................500</p>

<p>Smaller screen:
Old Cheese – Salad, Avocado, Egg,
Herbal Mayo..500</p>

<p>Extra small screen:
Old Cheese – Salad,
Avocado,
Egg, Herbal
Mayo...........................500</p>

<p>I have the following markup:</p>

<h2>HTML</h2>

<pre><code><div class="productline">
<div class="product">
Old Cheese – Salad, Avocado, Egg, Herbal Mayo
</div>
<div class="line"> </div>
<div class="price">500</div>
</div>
</code></pre>

<h2>CSS</h2>

<pre><code>.productline {
width:300px;
}
.product {
display:table-cell;
white-space: nowrap;
}

<p>hoping someone here can help :)</p>

<p>I am working on a report that shows current year's sales and the prior year's sales side by side. We have 5 different product groups (Construction, Plants, Retail, Seeds and Wholesale) and many product lines under each group (such as "Equipment" under construction, "Herbs" under plants, etc.).</p>

<p>I cannot figure out a way to construct my query so that I can get the groups and product lines to match up side by side going across. A salesrep may have sold some group/product line this year that he did not sell any $ in prior, and vice versa, he may have had sales in a group/product line in the prior year but not in the current. So I'm getting rows that aren't matching up because there's no records in one or the other. I would like to show that group/product line but with $0 sales dollars so the rows line up. Basically, I am getting order headers for a specific date range, then left outer joining the order details (that actually contains what product group and product line the order is for, not at the header level) and left outer joining the product line desc on the product line id on the order line level. </p>

<p>I've tried left outer join, right and also full, but I only am getting records back where there was at least one order for that product line. Below is my query; Order is the order header table, Order_Line is the order line table, Customer is the customer table, Major_Grp is the product group table, Category is the product line table, and Salesman is the salesman table:
</p>

```
<pre><code>SELECT  ol.PRICE_EXT, c.slsm2_num, s.slsm_desc, ca.pline_desc, m.
major_grp_desc
FROM  [ORDER]  o
left outer join [order_line] ol on o.order_num = ol.order_num
left outer join customer c on o.cust_num = c.cust_no
left outer join salesman s on c.slsm2_num = s.slsm_num
left outer join category ca on ol.pline_Num = ca.pline_Id
left outer join major_grp m on ol.major_grp = m.major_grp
WHERE c.SLSM2_NUM IN (@Salesrep) and
o.cust_num IN (@CustomerList) and
o.ord_date between (@ReqDateFrom2) and (@ReqDateTo2)
</code></pre>
```

<p>what do I have to do to get all Category product lines (and all Major_Grp product groups) to show up regardless if I have any sales for that group/product line?
<img src="https://i.stack.imgur.com/kC8sD.jpg" alt="enter image description here"></p>

<p>thank you SO much in advance for any help! :)</p>

<p>first,thanks for everyone taking time reading this...
for example,like a product line,each page will create some params,
and the current page may need to user the params created in the previous page..
I am not sure how to pass params through these pages,
maybe i need to say ,don't know choose which way.
we can use cookie、session、javabean and maybe others
using the cookie may results in some mistakes because of it's expires,
and using the session,i dont't know whether it would bring pressure to the server..
anyone can give me some suggestions?</p>

<hr>

<p>in the end,sorry for my english...</p>

22658918 pass parameters through serivals pages

<p>What would you like to be able to do for example is:</p>

<p>I have an active state 'order.detail' in shell, in these details would provide a link in each product line that leads to 'product.detail' state that is also a state that can be displayed in the shell.</p>

<p>But this link should display the state ' product.detail' as a frame in a dialog without changing the current location and maintain active state in the shell intact.</p>

<p>Also the 'product.detail' state, to be used as a main view of the shell, and to allow their reuse, your template should be wrapped by 'div' template of dialogue.</p>

<p>What I mean is, allow consult the details of something without leaving the current screen, and do so using the same existing details screen, or simply allow the 'Drill down' by related data with existing views.</p>

22800129 Many active states simultaneously with ui-router

<p>I am trying to integrate DynamicJasper report with Struts2 in my project. Strut2 (with XWork 2.2.1 jar) is already using JasperReports (version 4.7.1). As per the official dynamic jasper reports documention I have added DynamicJasper (version 5.0.0) and for Struts 2 integration added the dependency DynamicJasper-Struts2 (version 1.3) the latest available version.</p>

```
<p>I have a form and I can dynamically add more lines but if I try to remove a specific line it
does not work, however the first line gets removed with no problem.</p>

<p>Here is the html:</p>

<pre><code>&lt;form class="order-form"&gt;
  &lt;div class="product-lines"&gt;
&lt;!-- Product Line Section --&gt;
  &lt;div class="product-line"&gt;
&lt;a href="#" alt="close" class="btn-close" title="Remove"&gt;&lt;img alt="remove" src="
img/close.png"  /&gt;&lt;/a&gt;
&lt;input class="input-text" name="product-code" type="text" placeholder="Product Code"
&gt;&lt;/input&gt;
&lt;input class="input-text" name="product-quantity" type="text" placeholder="Quantity"&gt;
&lt;/input&gt;
&lt;input class="input-text" name="product-discript" type="text" placeholder="Discription of
Product"&gt;&lt;/input&gt;
&lt;label class="label-sign"&gt;&amp;pound;&lt;/label&gt;
&lt;input class="input-text" name="product-price" type="text" placeholder="RRP Price"&gt;&lt;
/input&gt;
&lt;br&gt;
  &lt;/div&gt;
&lt;/div&gt;

&lt;div id="product-btn"&gt;
&lt;input name="btn-add-line" type="button" value="Add new line"&gt;&lt;/input&gt;
&lt;input name="btn-update" type="button" value="Update"&gt;&lt;/input&gt;
&lt;input name="btn-submit" type="submit" value="Submit Order"&gt;&lt;/input&gt;
&lt;label class="label-sign"&gt;&amp;pound;&lt;/label&gt;
&lt;input class="input-text" name="order-info" type="text" placeholder="Order total" &gt;&lt;
/input&gt;
&lt;/div&gt;
&lt;/form&gt;
</code></pre>

<p>The jQuery code I have tried:</p>

<pre><code>$(".btn-close").on("click", function(e){
    $(e.currentTarget).parent().remove();
});
</code></pre>
```

```
<p>I have a form and when I enter a number and "keyup" it should display the total. However
as long as the form is static it works fine but if dynamically generated it does not work.</p>

<p>I've added a js fiddle link, Any help mu appreciated</p>

<p><a href="http://jsfiddle.net/scorpion_rain/38vM9/1/" rel="nofollow">JSFiddle</a></p>

<pre><code>&lt;form class="order-form"&gt;
&lt;div class="product-lines"&gt;
   &lt;!-- Product Line Section --&gt;
   &lt;div class="product-line"&gt;  &lt;a href="#" alt="close" class="btn-close" title="Remove"
&gt;&lt;img alt="remove" src="img/close.png" /&gt;&lt;/a&gt;

       &lt;input class="input-text" name="product-code" type="text" placeholder="Product
Code"&gt;&lt;/input&gt;
       &lt;input class="input-text" name="product-quantity" type="text" placeholder="Quantity"
&gt;&lt;/input&gt;
       &lt;input class="input-text" name="product-discript" type="text" placeholder="Discription
of Product" disabled&gt;&lt;/input&gt;
       &lt;label class="label-sign"&gt;&amp;pound;&lt;/label&gt;
       &lt;input class="input-text" name="product-price" type="text" placeholder="RRP Price"
&gt;&lt;/input&gt;
       &lt;br&gt;
   &lt;/div&gt;
&lt;/div&gt;
&lt;p&gt;Line below dynamically generated&lt;/p&gt;
&lt;div class="product-lines"&gt;
   &lt;!-- Product Line Section --&gt;
   &lt;div class="product-line"&gt;  &lt;a href="#" alt="close" class="btn-close" title="Remove"
&gt;&lt;img alt="remove" src="img/close.png" /&gt;&lt;/a&gt;

       &lt;input class="input-text" name="product-code" type="text" placeholder="Product
Code"&gt;&lt;/input&gt;
       &lt;input class="input-text" name="product-quantity" type="text" placeholder="Quantity"
&gt;&lt;/input&gt;
       &lt;input class="input-text" name="product-discript" type="text" placeholder="Discription
of Product" disabled&gt;&lt;/input&gt;
       &lt;label class="label-sign"&gt;&amp;pound;&lt;/label&gt;
       &lt;input class="input-text" name="product-price" type="text" placeholder="RRP Price"
&gt;&lt;/input&gt;
       &lt;br&gt;
   &lt;/div&gt;
```

<p>I am aware that nesting is a problem with form tags. However, my page does not have nested forms. I have one form (id="menuForm") to enclose the p:menu. Next, I have a form (id="locationForm") lower in the page. I have checked the html source that is output, and there is no nesting happening.</p>

<p>I have one p:commandButton that I want to use to submit the form. It works occasionally, but not all of the time. Sometimes, the method fires and other times it doesn't. Can anyone poing out what I'm doing wrong?</p>

<p>Also--If I comment out the menu form completely it works as intended.</p>

<p>Thanks.</p>

<p>Action Method:</p>

<pre><code>   public String insertLocationAction(){
    System.out.println("******* Method Fired.");
    DatabaseManager.insertLocation(newLocation);
    return "locations";
    }
</code></pre>

<p>XHTML Page:</p>

<p>I would like to aggregate data at level A and also show detail for one level down, say B.
Here is my query that aggregates the amounts at a product_line level (A).</p>

<pre><code>SELECT
  pl.business_unit AS "BU"
 ,p.prod_line
 ,SUM(i.inv_amt) AS "Amount"
FROM   invoice i
LEFT   JOIN product p ON p.item_num = i.item_num
LEFT   JOIN product_level pl ON pl.pl_num = p.pl_num
WHERE i.date BETWEEN '01-APR-2014' AND '30-APR-2014'
GROUP BY pl.business_unit
        ,p.prod_line
HAVING SUM(i.inv_amt) > 500000
</code></pre>

<p>In the <code>invoice</code> table I have a <code>item_desc</code> field (level B). All item descriptions roll up to a product line description but if I add <code>item_desc</code> to the main query it won't aggregate correctly. I have tried all types of subqueries in <code>FROM and SELECT</code> with no correct result. I haven't used sub queries before but think that is what I need. If so, how would I accomplish having aggregation at the <code>prod_line</code> level while including the <code>item_desc</code> for each line? Thanks for any help! </p>

23666470 Combine aggregate level values with lower level deta

<p>I am looking at options to create dynamic web forms within my asp.net application. I know there are lot of open source options available using Jquery, Angular etc.</p>

<p>However the forms I need to create are more of structured documents to capture standard procedures. for e.g. Patient Registration Form</p>

<p>Though infopath appears to fit in to creation of structured documents, i am not considering since MS has discontinued this product line. </p>

<p>The different options I am exploring are :</p>

Combine dynamic web form creation using jquery/knockout with a fluid grid library like
Gridster
Check if i can publish word forms and capture the user entered data on submit action
Use Nintex or similar paid product

<p>Any suggestions or directions will be helpful.</p>

23754991 How to create dynamic structured documents in asp.

<p>To give some background on this, I've got a handful of 2000, 2005, 2008, 2008R2 and 2012 servers in my environment. I'm trying to identify, programmatically via TSQL, which servers are of a sufficient level to tie into the sys.dm_db_partition_stats. To make things complicated, MS introduced this feature officially with SP2 on 2008 R2, SP1 with 2012, and were nice enough to include it in the RTM for 2014. What I want to do is determine which version the current SQL Server is that I'm running said query on and then compare if that version is equal to or higher than the aforementioned SQL Server versions/patch levels. If so I'll use the new DMV, otherwise I'll use the depreciated sys. sysindexes DMV.</p>

<p>Just to warn you, this isn't as simple as looking at the major product version. For instance, if I have a SQL Server 2012 RTM server, it is at a higher level than the SQL 2008 R2 SP2 level, but it's not of a sufficient level on the 2012 product line, so this routine has to have some logic explicitly built in.</p>

<p>I tried sidestepping this and querying the sys.all_views view, but ironically the sys. dm_db_partition_stats DMV was included with SQL Server as early as 2005, though trying to query it results in a query parse failure.</p>

<p>I could use a "poor practice" workaround in place that runs some DSQL within a TRY CATCH block, but frankly that truly is a bad approach and I'd rather do it the right way.</p>

<p>So, to my question: Does anyone have a procedure that they can share that will programmatically return a true/false if the SQL Server Version fits into a certain Patchset level or higher? </p>

<p>I've got no problems coming up with said routine myself, but was hoping someone out there already had something similar I could tie into.</p>

<p>Thanks,</p>

<p>John</p>

<p>I have started using magmi to import products, using the option <code>create new items & update existing ones</code>, however, when a new product is created, the <code>_attribute_set</code> seems to be ignored.
I have defined an attribute set in Magento called <code>Books</code>, which includes attributes such as ISBN, author.</p>

<p>Here is a sample from the CSV file (only the first few columns):</p>

<p>Header:</p>

<blockquote>
  <p>sku,_store,_attribute_set,_type,categories,_product_websites,name</p>
</blockquote>

<p>Product Line:</p>

<blockquote>
  <p>ZZ001,,Books,simple,MyCategory/MySubCategory,base,Book Title</p>
</blockquote>

<p>On the above example, ZZ001 is created, but with an attribute set of <code>Default</code></p>

<p>Store is blank - is this a problem?</p>

<p>Someone else asked a question about this - but I didn't see a satisfactory answer.</p>

23846337 magmi attribute_set ignored - always set to default

<p>We have a client with following existing product line</p>

Website1 (Uses form authentication using user information stored in SqlDB for website1)

WebSite2 (Uses form authentication using user information stored in SqlDB for website2)

WinApplication1 (uses Active Directory to authenticate user)

<p>More products in line for future release.</p>

<p>They want to implement Single Sign on (SSO) for all their products with following features-
</p>

Product list that will be accessing by a user will be depended on his/her role.
It should be configurable. Roles are being defined in DB having Fk relation
with user table.
SSO service should be flexible to accommodate new product.
should use SAML to sucure token.
WinApplication1 has link for website1 and website2. If an user is login in WinApplication1
and click on any links of website1/website2, user should able to access the sites without
entering his credential.
If user is logned in in any product that user should be all to access any other product
he has access right without enterting userid/password.

<p>We have following query</p>

We are planning to implement SSO using WCF and WIF. Can all above requirement be fulfill
by using WIF.
We want to keep user authentication part in respective product as each product has their
own user store. OR WE SHOULD HAVE CENTRALIZED USER STORE?
What shouldl be the responsibility of STS (implemented in WCF) in respect to SSO &
security?

<p>We have read lot about WIF from MSDN(<a href="http://msdn.microsoft.com/en-
us/library/hh377151%28VS.110%29.aspx" rel="nofollow">http://msdn.microsoft.com/en-

<p>I am trying to select the top 10 products by internet sales from the Adenture Works cube (the cube I managed to compile with the Analysis Services Tutorial), I managed to do the cube perfectly, now I need to add a filter to add a specific product line and a given month and I don't know how to build the query...</p>

<p>I have this working:</p>

<pre><code>with
set productNames as head(order({[Product].[Model Name].children}, [Measures].[Internet Sales-Unit Price], desc), 10)
select [Measures].[Internet Sales-Unit Price] on 0,
productNames on 1
from [Analysis Services Tutorial]
</code></pre>

<p>I added the filter and the result is the same...</p>

<pre><code>with
set productNames as head(order(
    filter({[Product].[Model Name].children},[Product].[Product Model Lines].[Product Line].&[R])
    , [Measures].[Internet Sales-Unit Price], desc), 10)
select [Measures].[Internet Sales-Unit Price] on 0,
productNames on 1
from [Analysis Services Tutorial];
</code></pre>

<p>Note: I can't use the hierarchy, because on my production database (which is not adventure works) I don't have hierarchies setup for the given problem. </p>

24079482 select the top 10 products of a given category

<p>I am trying to run a query on an Oracle 10g DB to try and view 2 groups of transactions. I want to view basically anyone who has a transaction this year (2014) that also had a transaction in the previous 5 years. I then want to run a query for anyone who has a transaction this year (2014) that hasn't ordered from us in the last 5 years. I assumed I could do this with the 'IN' and 'NOT IN' features. The 'IN' query runs fine but the 'NOT IN' never completes. DB is fairly large which is probably why. Would love any suggestions from the experts!</p>

<p>*Notes, [TEXT] is a description of our Customer's Company name, sometimes the accounting department didn't tie this to our customer ID which left NULL values, so using TEXT as my primary grouping seemed to work although the name is obscure. CODE_D is a product line just to bring context to the name.</p>

<p>Below is my code:</p>

```
<pre><code>SELECT CODE_D, sum(coalesce(credit_amount, 0) - coalesce(debet_amount,0)) as
TOTAL
FROM
gen_led_voucher_row_tab
WHERE ACCOUNTING_YEAR like '2014'
and TEXT NOT IN
   (select TEXT
   from gen_led_voucher_row_tab
   and voucher_date &gt;= '01-JUN-09'
   and voucher_date &lt; '01-JUN-14'
   and (credit_amount &gt; '1' or debet_amount &gt; '1')
   )
GROUP BY CODE_D
ORDER BY TOTAL DESC
</code></pre>
```

<p>I'm getting this error whenever I run this code - I've been staring at it for hours trying to decipher what is happening but it's something internal to Dynamic PDF so I haven't been able to step into the code to debug it. Any help would be appreciated.</p>

```
<pre><code>    public void GeneratePDF(Guid id)
    {
        ceTe.DynamicPDF.Document doc = new ceTe.DynamicPDF.Document();
        doc.Author = new IssueTracker.ActiveDirectory.Searcher().FindBySAMAccountName(User.
Identity.Name.Remove(0, 5)).DisplayName;
        doc.Creator = "GPO Pricing Application";
        doc.Title = "GPO Pricing Recommendation";

        Page page = new Page(ceTe.DynamicPDF.PageSize.Letter, ceTe.DynamicPDF.
PageOrientation.Landscape);

        doc.Pages.Add(page);

        Worksheet worksheet = repo.GetByID(id);

        AddElement(page, "Report Name: ", worksheet.Name, 0, 0 );
        AddElement(page, "Customer Name: ", worksheet.CustomerName, 0, 20);
        AddElement(page, "Allied Group: ", worksheet.AlliedGroup, 0, 40);
        AddElement(page, "City, State: ", worksheet.City + ", " + worksheet.State, 0, 60);
        AddElement(page, "Gross Annual Sales: ", string.Format("{0:C}", worksheet.AnnualSales),
0, 80);

        var Y = 100;
        Table2 table = new Table2(0, Y, 850, 600);
        table.Border.Width = 0.5f;
        table.CellDefault.Border.Width = 0.5f;
        table.Columns.Add(45); // Contract Id
        table.Columns.Add(125); // Product Line
        table.Columns.Add(75); // SKU
        table.Columns.Add(150); // Description
        table.Columns.Add(30);  // Qty
        table.Columns.Add(50); // Current Price (ea)
        table.Columns.Add(50); // Current Spend
        table.Columns.Add(50); // New Price (ea)
        table.Columns.Add(50); // New Spend
        table.Columns.Add(50); // Variance
```

<p>I have two SQL tables (SalesCategory and ProductLine), each with two columns. A product category cannot be associated with a Sales Category and a Product Line at the same time. Users can, however, change, for example, Product Category ABC to be associated with Sales Category 123 instead of Product Line 456. When something like this happens, I want to remove the record of Product Category ABC from the ProductLine SQL table and UPDATE the SalesCategory with the ID of Product Category ABC. But I am not sure how to do this without making another separate DELETE function and calling them inside the save function for the SQL table in question. I feel like I'm putting in too many functions related to these 2 SQL tables....</p>

<p>As an important side note, Product Categories cannot be associated with more than one Product Line or more than one Sales Category.</p>

<p>Is there a better way to setup the code so I don't have a bunch of functions floating around associated with two SQL database tables? Or is this the best way to go about things?</p>

<p>Here is my code as it is now:</p>

```
<pre><code>    //Get current Product Line and Sales Cateogry data for the current Category.
    //These two functions are called in the Page_Load
    protected string getProductLine()
    {
        string retVal = "";
        try
        {
            using (SqlConnection cn = new SqlConnection(ConfigurationManager.ConnectionStrings
["AbleCommerce"].ToString()))
            {
                cn.Open();
                SqlCommand cmd = new SqlCommand("SELECT ProductLine FROM ProductLine
WHERE uidCategory = @CategoryID", cn);
                cmd.Parameters.Add(new SqlParameter("@CategoryID", _CategoryId));
                cmd.CommandType = CommandType.Text;
                using (IDataReader reader = cmd.ExecuteReader())
                {
                    while (reader.Read())
                    {
                        if (reader["ProductLine"].ToString() != "")
                        {
                            productLineTxt.Text = reader["ProductLine"].ToString();
                            retVal = productLineTxt.Text;
                        }
```

<p>Alright, howdy
I have a client who I built a site for, call it www.site1.com</p>

<p>That client is now expanding and creating a new product line so they bought another domain, call it www.site2.net, and have tasked me with making that site as well. They have one deluxe hosting account with godaddy. Now I was wondering what the best way to do this would be. Site1 is a wp setup and they want to use the same wp setup and theme for site2. I started out setting up a subfolder /site1/site2 and had the domain point to the subfolder on the hosting. Entering in site2.net will take me to the correct subfolder. Just for fun I put in a whole other wp installation in the subfolder and installed the theme, started tinkering. Everything looked fine until I went back to site1 and saw that the pages were not loading. So I moved web.config up to the root folder and site1 works now but site2 pages won't load. I don't know enough about this but I've gathered that site2 will inherit the web.config properties setup from the root folder. Any suggestions on how to fix this or make this work? I know my client doesn't ideally want to pay for another hosting account so I'd like to make this work on the one hosting. I'm not very far at all on site2 but site1 is all set. Thanks in advance for any tips on this. </p>

<p>I have a @miniature model. Miniatures have_many Manufacturers via @minilines
I have a @line model. Lines belong_to Manufacturer.</p>

<p>When you want to add a @miniature to a @Line you click on the following link.</p>

<pre><code><%= link_to '<i class="fa fa-plus"></i> add'.html_safe,
new_miniline_path(:miniature_id => @miniature) %>
</code></pre>

<p>The form you then see is as follows</p>

<pre><code><%= form_for(@miniline) do |f| %>
<%= f.hidden_field :miniature_id, :value => @miniature.id %>

<%= f.label :line_id, 'Select product line' %>
<%= f.select :line_id, @lines, include_blank: true %>

<%= f.submit "Add", class: "btn btn-large btn-primary" %>
<% end %>
</code></pre>

<p>This works fine but what I want to do is make the options_for_select display only the @lines associated with the @manufacturer of the current @miniature.</p>

<p>I'm currently trying</p>

<pre><code><%= f.select :line_id, mfr_lines(@miniature), include_blank: true %>
</code></pre>

<p>and then defining it in a minilines_helper but I can't work out how to phrase it</p>

<pre><code>module MinilinesHelper

def mfr_lines(miniature)
miniature.manufacturers.each do |manufacturer|
manufacturer.lines

end
end

<p>I have a general question about the structure of my object model. Perhaps I am approaching this with tunnel vision from the wrong direction. I have two classes, Item and SerializedItem. I have defined them as such:</p>

```
<pre><code>public class Item
{
    public string ItemNumber { get; set; }
    public string Description { get; set; }
    public double Cost { get; set; }
}

public class SerializedItem : Item
{
    public string SerialNumber { get; set; }
    public MyObject Location { get; set; }
}
</code></pre>
```

<p>An Item is a generic definition of an item, and contains information common to that product. SerializedItem is a representation of a specific, physical item. My difficulty lies in the fact that only one Item with a particular ItemNumber should exist in memory at anytime, and I am not sure the best pattern to use to enforce that constraint while allowing a SerializedItem to act as its base type.</p>

<p>Maybe this is a more appropriate approach? I don't have a lot of experience using the 'New' keyword, and I've shied away from using it in the past in favor of an inheritance structure that didn't require its use.</p>

```
<pre><code>public class Item
{
    public string ItemNumber { get; set; }
    public string Description { get; set; }
    public double Cost { get; set; }
}

public class SerializedItem : Item
{
    private Items _item;
    public SerializedItemz(Item item)
    {
        _item = item;
    }
```

```
<p>I'm trying to creata a dynamic drop down select menu. I'm getting an unknown provider
error relating to a function I'm using to create a date range. Here is my code:</p>

<p>HTML
  </p>

<pre><code>&lt;ul data-role="listview" data-inset="true" &gt;
 &lt;li&gt;
  &lt;select id="makeSuperCategory" data-role="listview" ng-options="catagory as catagory.
text for catagory in catagories.cast " ng-model="itemsuper" ng-change="changeData()"&gt;
  &lt;/select&gt;
 &lt;/li&gt;
&lt;/ul&gt;
&lt;ul data-role="listview" data-inset="true"&gt;
 &lt;li&gt;
  &lt;select data-role="listview" ng-options="type as type.text for type in types.cast " ng-
model="item1" ng-change="update()"&gt;

  &lt;/select&gt;
 &lt;/li&gt;
&lt;/ul&gt;
</code></pre>

<p></p>

<p>Factories</p>

<pre><code>var myApp = angular.module('myApp',[]);

myApp.factory('catagories',function(){
 var makes = {};
 makes.cast = [
 {
  value: "acura",
  text: "Acura"
 },
 {
  value: "audi",
  text: "Audi"
 },
 {
```

<p>I read some example code to extract the data from Website using VBA in Excel, like this one for example Stackoverflow's Example. I understand some but I cannot find how to adapt into my problem.</p>

<p>Problem:
I need to extract the information from TE website , in this case, its link is <code>http://www.te.com/catalog/products/en?q=917695-1</code> - the data include the fields and the table also shown in the picture. </p>

<p>There are some comments I found that I will need to know some HTLM in order to do it - but I have no clue how.</p>

<p>I tried to look into the code of the page then I found the information hidden but still hard to have some thoughts about extracting these fields</p>

<pre><code>`<span class="te-search-gallery-family">2.5mm Signal Double Lock Connector</span>`
`<span class="te-search-gallery-desc">2.5 SIGNAL D/LOCK PLUG HSG 11P</span>`
</code></pre>

<p>and</p>

<pre><code><th class="first-cell"> Product Type</th>
<th> Connector Type</th>
<th> Connector Style</th>
<th> Product Line</th>
<th> Centerline</th>
<th> Application Use</th>
<th> Applies To</th>
<th> Wire/Cable Type</th>
<th> Contact Type</th>
<th class="last-cell"> Number of Positions</th>
</tr>
</thead>
<tbody>
<tr>
<td class="first-cell"> Connector</td>
<td> Housing</td>
<td> Plug</td>
<td> 2.5mm Signal Double Lock</td>

```
<p>Here I have a table row in a listview declared as follows:</p>

<pre><code>&lt;tr onclick="&lt;%= _jsPostBackCall %&gt;;" /&gt;
</code></pre>

<p>I am calling a postback method on the backend but must get the tr index:</p>

<pre><code>    public void RaisePostBackEvent(string eventArgument)
    {
        //selected index here
    }
</code></pre>

<p>aspx page content - below is the html in the aspx page. This contains the listview.</p>

<pre><code>&lt;asp:ListView ID="lvEquipmentList" runat="server" OnSelectedIndexChanged="
lvEquipmentList_SelectedIndexChanged" OnSelectedIndexChanging="
lvEquipmentList_SelectedIndexChanging"&gt;
            &lt;LayoutTemplate&gt;
                &lt;table runat="server" class="TableCSS"&gt;
                    &lt;tr runat="server" class="TableHeader"&gt;
                        &lt;td runat="server" style="width: 30%;"&gt;PRODUCT LINE&lt;/td&gt;
                        &lt;td runat="server" style="width: 20%;"&gt;MODEL&lt;/td&gt;
                        &lt;td runat="server" style="width: 20%;"&gt;SERIAL #&lt;/td&gt;
                        &lt;td runat="server" style="width: 12%; text-align:center"&gt;DAR STATUS&lt;
/td&gt;
                        &lt;td runat="server" style="width: 18%; text-align:right;"&gt;SHIP DATE&lt;
/td&gt;
                    &lt;/tr&gt;
                    &lt;tr id="ItemPlaceholder" runat="server"&gt;
                    &lt;/tr&gt;
                &lt;/table&gt;
            &lt;/LayoutTemplate&gt;
            &lt;EmptyDataTemplate&gt;
                &lt;table id="Table1" runat="server" class="TableCSS"&gt;
                    &lt;tr runat="server" class="TableHeader"&gt;

                        &lt;td id="Td4" runat="server" style="width: 12%; text-align:center;"&gt;DAR
STATUS&lt;/td&gt;
```

<p>I have two DataGridComboBoxColumns (technically DataGridTemplateColumns) in a DataGrid. I'm using MVVM.</p>

<p>The first column's ItemsSource is bound to a static resource -- no problem there. </p>

<p>The second column's ItemsSource is dependent on the value chosen by the first column. The first column's value (SelectedValue) is passed to an ObjectDataProvider as a MethodParameter. The ObjectDataProvider is the second column's ItemsSource. </p>

<p>The problem with using the first column's SelectedValue as ObjectDataProvider's MethodParameter is when I insert a second row in the DataGrid. If the second row uses a different value in column 1 than it did in the first row's column 1, it clears the first row's column 2 value (as the new SelectedValue changes the allowable list of items to choose from, provided by the ObjectDataProvider). </p>

<p>I'd really like to pass in the first column's Text value to the ObjectDataProvider as its MethodParameter, but how can I do so when the first column's Text value is already bound to update my model? </p>

<p>Here's excerpts of my problem XAML:</p>

<pre><code><!--
My ObjectDataProvider. It returns a collection of strings for the user to choose from via the second DataGridTemplateColumn.
The first DataGridTemplateColumn feeds ObjectDataProvider a MethodParameter.

The method is simple. It looks like:
    public List<String> ProductLineCategoryList_CategoryCodes(string productLineCode)
    {
        // return a list of strings based from an object collection, filtered by the passed in argument.
    }
-->

<ObjectDataProvider x:Key="categoryCodes" ObjectType="{x:Type e:ItemsProvider}" MethodName="ProductLineCategoryList_CategoryCodes">
    <ObjectDataProvider.MethodParameters>
        <x:StaticExtension Member="sys:String.Empty"/>
    </ObjectDataProvider.MethodParameters>
</ObjectDataProvider>

<!--

<p>The purpose is to color a single field and not the entire fields in the tree. For eg: I have a product line and i need to color the product field alone as red based on a condition.</p>

25801674	The purpose is to color a single field and not the entire fields in the tree. For eg: I have a product line and i need to color the product field alone as red based on a condition.	How to color a single field in tree view in openerp bas

<p>I'm trying to simplify my stylesheet so if I want to change the color of my default paragraph text or any text I can just add for example (class="blue") So I have a list of general colors to use on any text like this:</p>

<pre><code>.dark-grey { color: #232323; }
.med-grey { color: #616161; }
.light-grey { color: #e2e3e4; }
.orange { color: #f66511; }
.light-orange { color: #f66511; }
.blue { color: #2251a4; }
.white { color: #ffffff; }
</code></pre>

<p>In my example, why is my Subaru Forester</p> not turning blue?</p>

<p>Do I have to put all those colors under my div for the colors to work?</p>

<p>Here's my jsfiddle: <a href="http://jsfiddle.net/huskydawgs/1ysq0c3y/7/" rel="nofollow"
>http://jsfiddle.net/huskydawgs/1ysq0c3y/7/</p>

<p>Here's my code:</p>

<pre><code><p class="orange">Honda CRV</p>
<p>See full features and specs of the 2014 Honda CR-V SUV at the Official Honda Web site. View seating dimensions, EPA mileage ratings and engineering</p>

<div id="wrapper-landing">
<p class="blue">Subaru Forester</p>
<p>Fuji Heavy Industries, the company that builds Subaru vehicles, is a master of the economics of scale and, until the arrival this year of the 2013 BRZ sports car, built an entire product line from just two different vehicle platforms, two different power trains and, of course, two different versions of the company's Symmetrical All-Wheel Drive (AWD) system. The new 2014 Subaru Forester, a popular compact crossover SUV, springs from the company's small car platform, which also provides the basis for the Impreza, the WRX and the XV Crosstrek models.</p>

</div>
</code></pre>

<p>Here's my CSS:</p>

<p>I need to exclude VAT from details product line, my customers demands me this way.</p>

<p>I have been researching and I found <code>order_conf.html</code> file and it can be modified.
Is there any value to show item price without VAT in product description ?</p>

26177143 How to exclude VAT from order.conf in PrestaShop 1.

<p>I have an html table within a list view, and have a hidden label in it called "vehicle_num". I am able to get the selected row of the table, as well as any of the td, however I cannot seem to get the value of the label. I have tried:</p>

<pre><code>var vehicle_number = $(this).closest('tr').children('#vehicle_num').text();
</code></pre>

<p>Below is the code for the listview. How can I get the value of the label?</p>

<pre><code><asp:ListView ID="lvEquipmentList" runat="server" DataKeyNames="
vehicle_number">
<LayoutTemplate>
<table id="table-equipment-list" class="table table-list">
<thead>
<tr>
<th scope="col" class="product-line">Product line</th>
<th scope="col" class="model-number">Model #</th>
<th scope="col" class="serial-number">Serial #</th>
<th scope="col" class="dar-status">DAR Status</th>
<th scope="col" class="ship-date">Ship Date</th>
</tr>
</thead>
<tbody>
<asp:PlaceHolder ID="ItemPlaceholder" runat="server" />
</tbody>
</table>
</LayoutTemplate>
<ItemTemplate>
<tr>
<th scope="row" class="product-line"><div class="icon"><img src='<%
#Eval("image_path")%>' onerror="this.src='assets/images/placeholder.png';" alt=""/><
/div> <%#Eval("product_line")%><
/th>
<td class="model-number"><%#Eval("model")%><label class="
vehicle_num" hidden="hidden"><%#Eval("vehicle_number")%></label><
/td>
<td class="serial-number"><%#Eval("serial_number")%></td>
<td class="dar-status"><img src='<%#Eval("display_status") %>'/><
/td>
<td class="ship-date"><%#Eval("date")%></td>
</tr>
</ItemTemplate>

<p>I am kinda new to gradle… I created a Java API (now a Gradle project which builds an jar) a long time ago which has some sensitive parts responsible for unencrypting company data as well as some non sensitive stuff. I have a new project that requires part of this API and naturally I don´t want to give away the whole API to other developers/contractors.</p>

<p>Ideally what I would like to do is create two variants, (lets say "Pro" and "Lite" for arguments sake - a simple product line approach I guess). </p>

<p>Is it possible to use gradle to build two different jars?
1. One which is the Pro full API
2. One which is the Lite API stripped of the relevant classes.</p>

<p>I see some mention of "flavours" on the net but seems all the hits are to do with Android development and properties. </p>

<p>The worse case scenario is that I create a new project containing just the needed code, but if I add new features/bug fixes to the API I wouldn't get the benefits of having them consolidated in a single project.</p>

<p>Another way could be to structure the existing project into different projects and have the security related stuff (both I/O and model) as a different jar.</p>

<p>Many thanks to anyone who can shed some light here... </p>

26413017 Creating variants for programming APIs in Gradle

<p>I have a report with a static choice on the prompt page. The user can choose 'Full Detail', or 'Summarised'.</p>

<p>For a simplified example, say my report has these columns: Customer, Product, Date, Quantity, Value.</p>

<p>I would like to be able to show/hide the Date column based on the detail level choice, and have the Quantity and Value columns aggregate into a single Customer/Product line. I know how to show/hide the column (tying the choice variable to the column's Render Variable), but this does not do the aggregation, only makes the column invisible.</p>

<p>I have thought about doing a separate report page for Full Detail and Summary, but in my actual report I have a second choice box with which the user can choose a field to summarise by (e.g. Customer or Product), and the report will section-group by that field. At the moment I am doing that one per page (5 of them). Doing the detail choice the same way would mean I would need 10 pages. There is surely a better way.</p>

<p>
</p>

<p>Full detail:</p>

<pre>
Customer   Product   Date   Qty   Value
ABCD   Things   22/10/2014   10   1.00
                       21/10/2014   40   4.00
                       23/10/2014   50   5.00
</pre>

<p>Summarised (How it looks at the moment, after hiding the Date column):</p>

<pre>
Customer   Product   Qty   Value
ABCD   Things   10   1.00
                      40   4.00
                      50   5.00
</pre>

<p>Summarised (How I would like it to look):</p>

<pre>
Customer   Product   Qty   Value

<p>This is just a general question about the helper "form_for". I'm working on a program out of a textbook which has a form file using <code><%= form_for(@product) do |f| %></code>. The form is shared by the new and edit template. However, I've seen a lot of tutorials using a symbol (:product) instead of the instance variable. So, I tried swapping them to see what would happen. As it happens it gives me a routing error when trying to sumbit a form:</p>

<pre><code>No route matches [POST] "/products/new"
</code></pre>

<p>and</p>

<pre><code>No route matches [POST] "/products/5/edit"
</code></pre>

<p>Here's the code:</p>

<pre><code>   <%= form_for(:product) do |f| %>
  <% if @product.errors.any? %>
    <div id="error_explanation">
      <h2><%= pluralize(@product.errors.count, "error") %> prohibited this product from being saved:</h2>

      <% @product.errors.full_messages.each do |message| %>
        <%= message %>
      <% end %>

    </div>
  <% end %>

  <div class="field">
    <%= f.label :title %>
    <%= f.text_field :title %>
  </div>
  <div class="field">
    <%= f.label :price %>
    <%= f.text_field :price %>
  </div>
  <div class="actions">
    <%= f.submit %>
  </div>
<% end %>

<p>I am trying to create a trigger named that will automatically update the product quantity on hand for a product when a corresponding product LINE row is deleted. I had no issues creating triggers that can update the same value after an insertion or an update, but for some reason this is getting me confused.</p>

<p>Here is what I have so far:</p>

```
<pre><code>CREATE OR REPLACE TRIGGER UPDATE_DELETE
AFTER DELETE ON LINE
FOR EACH ROW
BEGIN
   UPDATE PRODUCT
   SET P_QOH = P_QOH +
   (SELECT LINE_UNITS
   FROM LINE
   WHERE LINE.P_CODE = PRODUCT.P_CODE)
   WHERE PRODUCT.P_CODE = :NEW.P_CODE;

DBMS_OUTPUT.PUT_LINE('Product QOH updated');
END;
/
</code></pre>
```

<p>All I am trying to do is pass the value that is currently in LINE_UNITS on the row that is to be deleted, and add it to the P_QOH in the PRODUCT table, so that it reflects the correct QOH after deletion. I have tried a few different ways, but so far, no luck. When I try to delete a row, I get an error that says:</p>

<blockquote>
<p>A trigger (or a user defined plsql function that is referenced in
this statement) attempted to look at (or modify) a table that was
in the middle of being modified by the statement which fired it.
*Action: Rewrite the trigger (or function) so it does not read that table.</p>
</blockquote>

<p>Here is another way I tried to do it:</p>

```
<pre><code>CREATE OR REPLACE TRIGGER UPDATE_DELETE
AFTER DELETE ON LINE
FOR EACH ROW
BEGIN
```

<p>hello i am exporting data from mysql to excell in codeignater its working fine on localhost but it's not working on server .on server its print only array like this.</p>

</code></pre>

<p>Dear Sir,</p>

<p>I'd like to take this opportunity to introduce BEW Pneumatic Controls,Delhi, to you.</p>

<p>We manufacture Heavy Duty Solenoid Valves in   Spool construction using all-Aluminium fittings.While most manufacturers use plastic fittings,plastic cages, we at BEW pioneered Aluminium fittings and have incorporated them across our product line.</p>

<p>Please find attached our latest product catalogue for your perusal and we look forward to hearing from you soon.</p>

<p>Best Regards,</p>

```
<p>I am using the code below to add in a new product line when the user clicks on "Add new
item", but once I submit the form the added rows are nowhere to be found.</p>

<p>I have tried dumping the form and the only form fields that appear are the ones that are on
the page once it has loaded so I cannot get the data for the rest of the rows.</p>

<p>I have tried moving the form tags around without any luck</p>

<p>Below is the page with the script that I use to add in new rows:</p>

<pre><code>&lt;cfinclude template="header.cfm"&gt;
&lt;cfparam name="form.step" default="1"&gt;
&lt;cfparam name="form.submit" default=""&gt;

&lt;script type='text/javascript'&gt;
//&lt;![CDATA[
$(document).ready(function() {
var currentItem = 1;
$('#addnew').click(function(){
currentItem++;
$('#items').val(currentItem);
var strToAdd = '&lt;tr&gt;&lt;td class="Copy" valign="top"&gt;Item Name:&lt;/td&gt;&lt;td&gt;
&lt;input type="text" name="Itemname'+currentItem+'" id="Itemname'+currentItem+'"
required="yes" message="Please enter a Name" class="TextBlock"&gt;&lt;/td&gt;&lt;/tr&gt;
&lt;tr&gt;&lt;td class="Copy" valign="top"&gt;Item Description:&lt;/td&gt;&lt;td&gt;&lt;input
type="text" name="ItemDesc'+currentItem+'" id="ItemDesc'+currentItem+'" required="yes"
message="Please enter a Description" class="TextBlock"&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;
td class="Copy" valign="top"&gt;Quantity&lt;/td&gt;&lt;td&gt;&lt;input type="text" name="
Quantity'+currentItem+'" id="Quantity'+currentItem+'" required="yes" message="Please enter
a Quantity" class="TextBlock"&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td class="Copy" valign="
top"&gt;Product Code:&lt;/td&gt;&lt;td&gt;&lt;input type="text" name="Code'+currentItem+'"
id="Code'+currentItem+'" required="yes" message="Please enter a Code" class="TextBlock"
&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td class="Copy" valign="top"&gt;Price:&lt;/td&gt;&lt;
td&gt;&lt;input type="text" name="Price'+currentItem+'" id="Price'+currentItem+'" required="
yes" message="Please enter a Price" class="TextBlock"&gt;&lt;/td&gt;&lt;/tr&gt;';
  $('#data').append(strToAdd);

 });
 });

 //]]&gt;
 &lt;/script&gt;
```

```
<p>Using CodeIgniter, I am creating an admin area where I am able to create footnotes for any
given product line.</p>

<p><strong>HTML</strong></p>

<pre><code>&lt;p&gt;Choose Product Line&lt;/p&gt;
&lt;label&gt;&lt;input type="checkbox" name="productline[]" value="1" /&gt;Product One&lt;
/label&gt;
&lt;label&gt;&lt;input type="checkbox" name="productline[]" value="2" /&gt;Product Two&lt;
/label&gt;
&lt;label&gt;&lt;input type="checkbox" name="productline[]" value="3" /&gt;Product
Three&lt;/label&gt;
&lt;label&gt;&lt;input type="checkbox" name="productline[]" value="4" /&gt;Product Four&lt;
/label&gt;
</code></pre>

<p><strong>PHP</strong></p>

<pre><code>for ( $i = 0; $i &lt; count( $this-&gt;input-&gt;post( 'product[]' ) ); $i++ )
{
   $line__id = $this-&gt;input-&gt;post( 'product' )[$i];

   $footnote_data = array(
      'line__id' =&gt; $line__id,
      'code' =&gt; $this-&gt;input-&gt;post( 'footnotecode' ),
      'text' =&gt; $this-&gt;input-&gt;post( 'footnotetext' ),
      'status' =&gt; $this-&gt;input-&gt;post( 'status' ),
      'createdon' =&gt; date( 'Y-m-d H:i:s' )
   );

   error_log( print_r( $footnote_data, true ) );
}
</code></pre>

<p>Which will output something like this:</p>

<p><strong>LOG:</strong></p>

<pre><code>Array
(
   [line__id] =&gt; 1
```

```

&lt;?php echo link_tag('resources/css/style.css'); ?&gt;
  &lt;script src="http://code.jquery.com/jquery-latest.min.js" type="text/javascript"&gt;&lt;
/script&gt;
    &lt;script type="text/javascript" src="&lt;?php echo base_url('resources/js/script.js');?&gt;"
&gt;&lt;/script&gt;
    &lt;script type="text/javascript"&gt;var $rows = $('#table tr');
$('#search').keyup(function() {
  var val = $.trim($(this).val()).replace(/ +/g, ' ').toLowerCase();

  $rows.show().filter(function() {
    var text = $(this).text().replace(/\s+/g, ' ').toLowerCase();
    return !~text.indexOf(val);
  }).hide();
});
&lt;/script&gt;
&lt;/head&gt;
&lt;body&gt;
&lt;div id="container"&gt;
    &lt;div id="top"&gt;
    &lt;img id="logo" src="&lt;?php echo base_url('resources/images/logo.jpg'); ?&gt;" alt="
litLogo"/&gt;
    &lt;/div&gt;
    &lt;div id="main"&gt;
    &lt;div id='cssmenu'&gt;
&lt;ul&gt;
  &lt;li class='active'&gt;&lt;a href="&lt;?php echo base_url('index.
php/LittleController/index');?&gt;"&gt;&lt;span&gt;Home&lt;/span&gt;&lt;/a&gt;&lt;/li&gt;
  &lt;li class="element"&gt;&lt;a href='#'&gt;&lt;span&gt;Shopping Cart&lt;/span&gt;&lt;/a&gt;
&lt;/li&gt;

  &lt;li class="element"&gt;&lt;a href='#'&gt;&lt;span&gt;Wish List&lt;/span&gt;&lt;/a&gt;&lt;
/li&gt;

  &lt;li class="element"&gt;&lt;a href='#'&gt;&lt;span&gt;Contact&lt;/span&gt;&lt;/a&gt;&lt;
/li&gt;
```

<p>The table displays only text, where images column should display actual image instead of just the name of image.</p>

<p>Everything else is fine and works perfectly but how to display the pictures?</p>

<p>controller code:</p>

```
<pre><code>function getData()
  {
    //check if the user is already logged in
    if($this-&gt;session-&gt;userdata('logged_in'))
    {
    //the user is already logged in -&gt; display the secret content
    redirect('logged');
        //get the session data
    $session_data = $this-&gt;session-&gt;userdata('logged_in');

    //get the username from the session and put it in $data
    $data['user'] = $session_data['username'];

    $config['base_url'] = site_url('LittleController/getData/');
    $config['total_rows'] = $this-&gt;littlemodel-&gt;record_count('products');
    $config['per_page'] = 10;
    $this-&gt;pagination-&gt;initialize($config);
    $data['Products'] = $this-&gt;littlemodel-&gt;getData(10, $this-&gt;uri-&gt;segment(3));

    foreach ($data['Products'] as &amp;$row)
    {
    $img = $row['image'];
    $row['image']= "&lt;img src='resources/images/thumbs/.$img'&gt;";
    //img('resources/images/thumbs/'.$img);

    }
    //$data["links"] = $this-&gt;pagination-&gt;create_links();
      $this-&gt;load-&gt;view('mainpage1', $data);
    }
    else
    {
      //user isn't logged in -&gt; display login form
      $data['user'] = "Guest";
      $config['base_url'] = site_url('LittleController/getData/');
```

<p>I have a workbook that has 2 worksheets and sub-sheets Named as per Product Line Column:</p>

NEW DATA sheet
Master Table sheet ("DBQ Query Result")
Subsheets (Driling and Workover, Fishing, Liner Systems, Professional Services, Wellbore Cleaning)

<p>They both have same headers, within the column headers there is a uniqueID column.</p>

<h3>PART A</h3>

<p>I would like to match uniqueID between those 2 sheets and:</p>

When there is a match, compare row cell values for each column and update if there is difference
When there is a uniqueID in NEW DATA sheet that does not exist in Master Table, I would like this whole row associated to this uniqueId to be copied to Master Table sheet

<h3>PART B</h3>

<p>I would like to have a new button that when pressed, UniqueID from Master Page will be compared with Unique Id column of each subsheet and:</p>

When there is a match, update subsheet row according to UNIQUEID
When there is no match, that means a new UNIQUEID is created and this should be added to its corresponding subsheet as a last row

<p>I would like to accomplish the above using VBA macro please. I have attached a sample of the excel https://dl.dropboxusercontent.com/u/29585269/Sample.xlsx.</p>

<p>Please let me know if you need any additional information.</p>

<p>my requirement is quite simple, just want to connect to emc storage server and get the storage information.
  i googled the web and found someone mentioned emc have the apis, but i did not get the details, so i want to know is there a rest api for connecting.
my second option is using ESIPSToolKit,but it need power shell and a windows server machine, a little annoying.</p>

<p>Thank you in advance. </p>

<p>here are some details, hope can help some one:
1) vnx and vmax are two very different product line.
2) ViPR have the rest api to manage vnx and vmax.
3) unisphere only support vmax for rest api
4) Celerra xml api only support file in vnx, no block support</p>

27935790 is there a .NET or REST (http) API for EMC (VNX\VMA)

```
<p>I'm using Dynamic jasper library to create dynamic columns for my report.<br>
This is my code:<br></p>

<pre><code>FastReportBuilder drb = new FastReportBuilder();
        DynamicReport dr = drb.addColumn("State", "state", String.class.getName(),30)
                .addColumn("Branch", "branch", String.class.getName(),30) // title, property to show,
class of the property, width
                .addColumn("Product Line", "productLine", String.class.getName(),50)
                .addColumn("Item", "item", String.class.getName(),50)
                .addColumn("Item Code", "id", Long.class.getName(),20)
                .addColumn("Quantity", "quantity", Long.class.getName(),30)
                .addColumn("Amount", "amount", Float.class.getName(),30)
                .addGroups(2)   // Group by the first two columns
                .setTitle("November 2006 sales report")
                .setSubtitle("This report was generateed at" + new Date())
                .setUseFullPageWidth(true) //make colums to fill the page width
                .build();

        JRDataSource ds = new JRBeanCollectionDataSource(TestRepositoryProducts.
getDummyCollection());
        JasperPrint jp = DynamicJasperHelper.generateJasperPrint(dr, new
ClassicLayoutManager(), ds);
        JasperViewer.viewReport(jp);
</code></pre>

<p>And this is my class <code>TestRepositoryProducts</code>:<br></p>

<pre><code>import java.util.ArrayList;
import java.util.Collection;
import java.util.Vector;

public class TestRepositoryProducts {

    public static Collection&lt;Object&gt; getDummyCollection() {
        Collection&lt;Object&gt; v = new ArrayList&lt;Object&gt;();
        v.add("qsdqsd");
        v.add("qsdqdqs");
        v.add("qsdqdqs");
        v.add("qsdqdqs");
        v.add(32165);
        v.add(65456);
```

<p>In the template for WooCommerce PDF invoices I see this piece of code <code>
[[ORDERINFO]]</code>. There are others, all in double brackets. Some of the data outputted by these code is not needed on my invoices. So I want to customize it.</p>

<p>In particular, I don't need the Qty, Total ex., Tax (in the product line), the Price Inc and the Total Inc columns. I just need the Product and Price ex Column. Of course do I need the totalization on the invoice, as there is: Subtotal, VAT (if applicable) and Grand Total. Shipping is not needed because the products are all downloadable.</p>

<p>I really not know how and where I do that. Please advise.</p>

28326401 Changing [[ORDERINFO]] in WooCommerce PDF invoi

```
<p>The problem is when i call the function <code>importDBfromAllSheets.insertTables();
</code> in my servlet, it will throw the <code>"ORA-00972: identifier is too long"</code>.</p>

<p>But when i call the function in local main() function, it works well.</p>

<p>servlet code:</p>

<pre><code>if (username != null &amp;&amp; username.equals(GlobalVariables.
defaultUserName)
            &amp;&amp; password != null &amp;&amp; password.equals(GlobalVariables.
defaultPassword)) {
        ImportDBfromAllSheets importDBfromAllSheets = new ImportDBfromAllSheets(
                GlobalVariables.oracleUrl, GlobalVariables.oracleUserName, GlobalVariables.
oraclePassword);
        importDBfromAllSheets.insertTables();
        System.out.println("aaaaaaaaaa");
        response.getWriter().print("Updating...");
    } else {
        response.getWriter().print("User/Pwd error");
    }
</code></pre>

<p>and main() code:</p>

<pre><code>public static void main(String[] args) {
    ImportDBfromAllSheets importDBfromAllSheets = new ImportDBfromAllSheets(
            GlobalVariables.oracleUrl, GlobalVariables.oracleUserName, GlobalVariables.
oraclePassword);
    importDBfromAllSheets.insertTables();
}
</code></pre>

<p>and my insertTables() is about:</p>

<pre><code>StringBuilder insert_sql = new StringBuilder();
    StringBuilder subSql1 = new StringBuilder();
    StringBuilder subSql2 = new StringBuilder();
    List&lt;String&gt; columnNames = getColumnNames();
    for (String columnName : columnNames) {
        subSql1.append("\"").append(columnName).append("\",");
        subSql2.append("?,");
    }
```

<p>I am running an api for magento shop to connect to economics : please check this link for that api : https://github.com/tkjaergaard/Economic-PHP-SDK?_e_pi_=7%2CPAGE_ID10%2C1957533932</p>

<p>I just paste the folder in root directory and getting my order through </p>

<pre><code>$orderId= Mage::getSingleton('checkout/session')->getLastRealOrderId();
$order= Mage::getSingleton('sales/order')->loadByIncrementId($orderId);
</code></pre>

<p>My question is I need to include api folder in root director / vendor / autoload.php file for connection my extension....
So that when an new order is been placed in my shop the total order details will be automatically add to economics api...</p>

<p>Any idea on this... thanks in advance.</p>

<p>Create a new Order This method lets you create a newOrder to a specific Debtor. Theaddmethod on thelineobject accepts a array containing information on the product line. The array accepts the following elements:.Product: The product number.required. Description: The line description.optional*.Price: The unit price of the line.optional*.Qty: The quantity of the line.optional*.Unit: The Unit number to use.optional</p>

<pre><code><?php
require(Mage::getBaseDir().DS.'Economic-PHP-SDK-master'.DS.'vendor'.DS.'autoload.php');
use tkj\Economics\Client;
use tkj\Economics\Order\Order;
$client = new Client($agreementNumber,$userID, $password);
$order = new Order($client);
$debtorNumber = 101;
$newOrder =$order->create($debtorNumber, function($line)
{
 $data = array(
"product"   => 301,
"description" => "Description of line.",
"price"   => 825.00,
"qty"   => 5,
"unit"   => 2);
$line->add($data);
});
</code></pre>

<p>I'm afraid I may be asking a really dumb question, but I can't seem to find anything that makes this clear. I usually work on smaller applications but am now working on a larger one with several assemblies in a baseline framework and several assemblies for a product line domain (with more to come). I would like to manage the build by configuring MSBuild. I've done a lot of online research (specifically with several MSDN articles I found) and now feel knowledgeable enough to be dangerous. </p>

<p>I understand that in csharp the *.csproj file can be unloaded and modified with properties, items, and targets to control the build process. I also understand that I can import my own targets file to help separate and organize. In this link though (https://msdn.microsoft.com/en-us/magazine/dd483291.aspx) a multilevel project build is organized with node-level dirs.proj files. This is confusing to me and has raised several questions I can't seem to find an answer to:</p>

What is the difference in a *.proj and *.csproj file?
Can a *.proj be setup in VS to load on Build with F6 or does using this require use of the command prompt only? (i.e. "msbuild dirs.proj /t:Build").
Does dirs.proj load automatically? If so, my study-by is not working correctly, yet it does with command prompt.
Or am I overlooking something all the way around with "dirs.proj" Maybe it's just a substitue name for one of the project *.csproj files? If that was the case though there wouldn't have been a need for the root node's dirs.proj which from what I can tell doesn't have an actual project associated to it.

<p>Anyways, I've seen dirs.proj mentioned in several forums regarding issues, but no where can I find how it's loaded or used in VS (outside of manual command prompt building which seems unreasonable if this is used to organize the build but the build won't really take a huge amount of time). I'm hoping someone can help me achieve that a-ha moment with this.</p>

<p>Thanks in advance.</p>

28832703 How is dirs.proj used?

<p>Got the following - reduced to a minimum - code:</p>

<p>CSS:</p>

<p><div class="snippet" data-lang="js" data-hide="false">
<div class="snippet-code">
<pre class="snippet-code-css lang-css prettyprint-override"><code>   html {
    height: 100%;
    }

    body {
    height: 100%;
    font-size: 1.5em;
    line-height: 1.5;
    font-family: Arial, Verdana, Helvetica, sans-serif;
    }

    a, a:link, a:active, a:visited {
    color: #e23427;
    text-decoration: none;
    }

    li {
    list-style: none;
    }

    /**1. Ebene Hauptnavigation**/
    ul.topNav {
    float: left;
    width: 700px;
    margin: 100px 0 0 40px;

    }
    ul.topNav li {
    float: left;
    position: relative;
    }
    ul.topNav li a.tmp {
    color: inherit;
    float: left;

<p>I am working on MDx query to count the number ZERO txn for each product for last 12 months from today's date. Prepared MDX query for Adventure works fine but my 2nd query running on my Acutal cube working correctly.</p>

<p>Can you please help me out to rectify the query or any filter needed to get correct results like 1st sample query? </p>

<h2>1st Sample Query on Adventure Works: (working correctly)</h2>

```
<pre><code>WITH Member [Measures].[Months With Zero Sales] AS
COUNT(
   FILTER(
      DESCENDANTS(
      {[Date].[Calendar].[Month].&amp;[2008]&amp;[1].LAG(12):[Date].[Calendar].[Month].
&amp;[2008]&amp;[1]}, [Date].[Calendar].[Month]) ,
[Measures].[Sales Amount] = 0 ) )
SELECT {[Measures].[Months With Zero Sales]} ON 0,
[Product].[Product Model Lines].[Product Line].Members on 1
FROM [Adventure Works];

Product Lines  Months With Zero Sales]
-----------    -----------------
Accessory      0
Componenets    0
Mountain       0
Road           0
Touring        6
</code></pre>
```

<h2>2nd Query on my Cube:</h2>

```
<pre><code>WITH Member [Measures].[Zero Months in last 12] AS
COUNT(
     FILTER(
          DESCENDANTS(
          {[Settlement Date].[Calendar].[Settlement Calendar Month].&amp;[2014]&amp;[1].LAG
(12):
          [Settlement Date].[Calendar].[Settlement Calendar Month].&amp;[2014]&amp;[1]},
          [Settlement Date].[Calendar].[Settlement Calendar Month]),
          [Measures].[Transaction Count] = 0 ) )
SELECT {[Measures].[Transaction Count] ,[Measures].[Zero Months in last 12]} ON 0,
```

<p>I have a form in which I wanted to have the Submit button have a pop-up to ask the user if they are sure they want to submit the form with the options 'OK' and 'cancel'. This seemed to work on all of my other forms but this one is not. Instead of showing the pop-up and asking the user for confirmation, it just submits.</p>

<p>Wondering if this might be because of a clash with the JS or another part of the logic in the form...</p>

<p>Code:</p>

```
<pre><code>{% extends "prod/page_base.html" %}

{% load dajaxice_templatetags %}
{% load static %}

{% block title %}{{ edit_add }} product configuration{% endblock %}

{% block dajax %}
    {% dajaxice_js_import %}
    &lt;script src="{% static 'dajax/jquery.dajax.core.js' %}"&gt;&lt;/script&gt;
{% endblock %}

{% block script %}
&lt;script src="http://ajax.googleapis.com/ajax/libs/jquery/1.10.2/jquery.min.js"&gt;&lt;
/script&gt;
&lt;script&gt;
$(document).ready(function(){
    if ($("#id_line").val() != "group1" &amp;&amp; $("#id_line").val() != "group2") {
        $("#group_fields").hide();
    }
    $("#id_line").click(function() {
        if ($("#id_line").val() != "group1" &amp;&amp; $("#id_line").val() != "group2") {
            $("#group_fields").hide();
        }
        else {
            $("#group_fields").show();
        }
    });
});
&lt;/script&gt;
{{ form.media }}
{% endblock %}
```

<p>I am trying to use XSL to present an XML report as HTML.
XSL does not return errors as per the format or anything(checked using Altova XMLSpy application) but does not provide the correct html table I am expecting.
Below is my XML code and my XSL code.
What I need, because my XML node/tag <code><row></row></code> does not always have <code><key></code> tags or <code><value></code> tags but it can be different for time to time, is to list all those child tags using xsl to html table dynamically whatever the case is.
For example below I want to produce an HTML table with rows the numbers of the rows and for each row to have the columns listed which will be in this case:</p>

<blockquote>
<p>column 1 = Institution_Id
column 2= Section
column 3= CATEGORY
column 4= SUBCATEGORY
column 5= ITEM
*column 6= VALUE
column7= SHORTCODE</p>
</blockquote>

<p>and the rows should be</p>

<blockquote>
<p>1
2
.
.
8
9
.
.
. </p>
</blockquote>

<p>ps: * as you can see from the xml the column 6 is not the same tag name as the rest <code><key></code> vs <code><value></code> this can be done with other cases like have <code><key></code> vs <code><item></code>.</p>

<p>XML code:</p>

<p>I have a large Microsoft Excel file that is shared between users in my office. The file has a macro and a set of data validation. The file is used the last two weeks of every third month. The file worked perfectly before Christmas, however, we encountered errors in March.The following error appeared when the file was opened.
<img src="https://i.stack.imgur.com/ZhyYF.png" alt="Error"></p>

<p>After clicking yes, the following appeared.
<img src="https://i.stack.imgur.com/pGc0z.png" alt="enter image description here"></p>

<p>The code for the macro is:</p>

```
<pre><code> Sub Update()

 'Declaring Variables.
  Dim Number_Rows As Long
  Dim Oppt As String
  Dim Array_Oppt() As String
  Dim Rows_Array As Integer

 'Stops screen refreshing to save time.
  Application.ScreenUpdating = False

 'removing any data validation and conditional formatting
  Sheet1.Activate
  Cells.Select
  Selection.Validation.Delete
  Selection.FormatConditions.Delete

 'Assigning value to array.
  Rows_Array = 0
  ReDim Preserve Array_Oppt(Rows_Array)

 'Moving "Other" rows to the end of the data
  Sheet1.Select
  Selection.AutoFilter Field:=23, Criteria1:= _
  "OTHER"

  Range("A2", Cells(Rows.Count,       "A").End(xlUp)).SpecialCells(xlCellTypeVisible).Cells(1, 1).
Select
```

<p>I'm adding a new column in a table, and while doing the alteration I received an error.</p>

<p>Please see below:</p>

<p><code>ALTER TABLE dbname.table_name ADD COLUMN column_name TINYINT(1)
UNSIGNED DEFAULT 0;
ERROR 1062 (23000): Duplicate entry '300866' for key 'PRIMARY'</code></p>

<pre><code>mysql> show create table dbname.table_name\G
*************************** 1. row ***************************
       Table: table_name
Create Table: CREATE TABLE `table_name` (

COMMENT 'Type of supplier',
  `fk_catalog_attribute_option_global_season` int(10) unsigned DEFAULT NULL COMMENT
'Season',

<p>I have the following models</p>

<pre><code>Shipment (id, product_id, ...)
Product (id, product_id, some_attribute:boolean, ...)
</code></pre>

<p>Where a shipment belongs to a product and a product has many shipments. Furthermore, a product can be a subproduct of another product through a self reference (<code>product_id</code>)</p>

<p>I want to find all the shipments for which the <code>some_attribute</code> on the product at the top of the self reference chain is true.</p>

<p>For example, in this example</p>

<pre><code>shipment1 (id = 1, product_id = 1)
shipment2 (id = 2, product_id = 2)

product1 (id = 1, product_id = 3, some_attribute = false)
product2 (id = 2, product_id = 4, some_attribute = false)
product3 (id = 3, product_id = null, some_attribute = false)
product4 (id = 4, product_id = null, some_attribute = true)
</code></pre>

<p>only <code>shipment2</code> should be returned, because it's product line goes like <code>p2->p4</code>, where <code>some_attribute</code> is true for <code>p4</code></p>

<p>Much appreciated</p>

<p>EDIT:</p>

<p>For clarity, the product chain can arbitrarily long, but in practice, it's usually around 2-3 links</p>

29923593

Find all records matching attribute on self association

<p>So I'm just trying to make a couple nav links drop down using bootstrap, but for the life of me I can't get the menus to retract. They all start off open (overlapping each other) and they won't close (seen below) I just need the dropdowns to respond normally and maybe automatically shut another one if you click a new one. Code: </p>

```
<pre><code>&lt;head&gt;

        &lt;a href = "#"&gt;&lt;img src = "site1/images/flemsupp.jpeg" height = "60px"&gt;&lt;
/a&gt;
      &lt;/li&gt;
```

<p>On an existing Zend Framework website with few controllers and no modules I need to add some prefixes to the default routes.</p>

<p>For example, I currently have :</p>

<pre><code>/products
/products/id/1
/training
/commonpage
</code></pre>

<p>I want to add a product line level, without duplicating my controllers in x modules (I'll just request the right product line inside my controllers with <code>_getParam</code>).</p>

<p>So my new paths will be :</p>

<pre><code>/line1/products
/line1/products/id/1
/line2/training
/commonpage
</code></pre>

<p>What I tried so far is this route (located in my Bootstrap file) :

<pre><code>protected function _initRoutes()
{
    $router = Zend_Controller_Front::getInstance()->getRouter();
    $router->addRoute('productLineRoute', new Zend_Controller_Router_Route(
        ':line/:controller/:action',
        array('module' => 'default'),
        array('line' => '(' . implode('|', Zend_Registry::getInstance()->constants->lines) . ')')
    ));
}
</code></pre>

<p>But without any success (it gives me a 404).
How can I build a single route that match all uri under those conditions :</p>

The prefix of the uri match a value in my product lines array

<p>in membership.py file the class account_invoice_line wich inherits 'account.invoice.line'
and override the write method wich will create a new member line when a new line of invoice
is created in an existed invoice. For me its not correct when a a new line of invoice is created
in an existing invoice it must be related to the existed member line and not create a new
member line
so i must override the write methode, but the problem that the write method in member.py file
is always executed
. So can someone tell me how to override the write method without passing by the write
methode in membership.py file. This is the code in file membership.py</p>

```
<pre><code>class account_invoice_line(osv.osv):
_inherit='account.invoice.line'

def write(self, cr, uid, ids, vals, context=None):
    """Overrides orm write method
    """
    member_line_obj = self.pool.get('membership.membership_line')
    res = super(account_invoice_line, self).write(cr, uid, ids, vals, context=context)
    for line in self.browse(cr, uid, ids, context=context):
        if line.invoice_id.type == 'out_invoice':
            ml_ids = member_line_obj.search(cr, uid, [('account_invoice_line', '=', line.id)],
context=context)
            if line.product_id and line.product_id.membership and not ml_ids:
                # Product line has changed to a membership product
                date_from = line.product_id.membership_date_from
                date_to = line.product_id.membership_date_to
                if line.invoice_id.date_invoice &gt; date_from and line.invoice_id.date_invoice &lt;
date_to:
                    date_from = line.invoice_id.date_invoice
                member_line_obj.create(cr, uid, {
                                'partner': line.invoice_id.partner_id.id,
                                'membership_id': line.product_id.id,
                                'member_price': line.price_unit,
                                'date': time.strftime('%Y-%m-%d'),
                                'date_from': date_from,
                                'date_to': date_to,
                                'account_invoice_line': line.id,
                                }, context=context)
            if line.product_id and not line.product_id.membership and ml_ids:
                # Product line has changed to a non membership product
                member_line_obj.unlink(cr, uid, ml_ids, context=context)
```

<p>I have an Excel file that in Excel 2007 is correctly authenticating with a server and exchanging information with its database using VBA for the logic. When this same program is opened in Excel 2010, it is stating that the login has failed. </p>

<p>I understand that Excel 2010 can have authentication issues using non-SSL connections (HTTP), see link below.</p>

<p>http://answers.microsoft.com/en-us/office/forum/office_2010-excel/excel-2010-cant-open-website-database-with/0d8bfebb-d398-492a-b49b-545bbec206c5</p>

<p>I know that this file is currently using HTTP to connect to this DB. Is this what is causing this issue? If not, what else might be?</p>

<p>Relevant code snippets:</p>

```
<pre><code>g_sServer = "http://" + g_sServer

g_sProductLine = g_oDom.documentElement.selectSingleNode("PRODLINE").Text

'If no product line is in the variable after the login...
If g_sProductLine = "" Then
   'Build the message
   s = "Your Login has Failed.  "
   s = s &amp; "Please click the Re-Login button if you would like to try again."
</code></pre>
```

<p>Thanks for your help</p>

<p>This is my jqgrid</p>

<p><img src="https://i.stack.imgur.com/5j1k0.jpg" alt="enter image description here"></p>

<p>Grid related code </p>

```
<pre><code>var lastsel2;
var containsOrNot = 'contains';
jQuery(document).ready(function(){
    jQuery("#list").jqGrid({
        url: "{{ asset('/app_dev.php/_thrace-datagrid/data/item_lookup_management') }}",
        postData: {
            masterGridRowId: {{ VPK }}
        },
        datatype: "json",
        mtype: 'POST',
        colNames: ['Item No', 'Description 1', 'Vendor Item No','Report Dec','Location','On
Hand','Exp balance','Available now','Lead Time','Type', 'Vendor #', 'Status', 'Stocked', 'Product
Line', 'Creator'],
        colModel: [
            {
                name: "I_ItemNumID",
                index: "u.I_ItemNumID",
                editable: false,
                align: 'left',
                searchoptions:{sopt:['cn','eq','ne','lt','le','gt','ge','bw','ew','nc']},
                width: '70'
            },
            {
                name: "I_Desc1",
                index: "u.I_Desc1",
                editable: false,
                align: 'left',
                searchoptions:{sopt:['cn','eq','ne','lt','le','gt','ge','bw','ew','nc']},
                width: '70'
            },
            {
                name: "I_VendorItemNum",
                index: "u.I_VendorItemNum",
                editable: false,
                align: 'left',
                searchoptions:{sopt:['cn','eq','ne','lt','le','gt','ge','bw','ew','nc']},
```

```
<pre><code>&lt;report xmlns="http://developer.cognos.com/schemas/report/7.0/"
expressionLocale="en-us"&gt;
&lt;modelPath&gt;/content/package[@name='GO Sales and Retailers']
/model[@name='model']&lt;/modelPath&gt;
&lt;queries&gt;
&lt;query name="Query1"&gt;
&lt;source&gt;
&lt;model/&gt;
&lt;/source&gt;
&lt;selection&gt;
&lt;dataItem name="Revenue" aggregate="total"&gt;
&lt;expression&gt;[gosales_goretailers].[Orders].[Revenue]&lt;/expression&gt;
&lt;/dataItem&gt;
&lt;dataItem name="Sales territory" aggregate="none"&gt;
&lt;expression&gt;[gosales_goretailers].[Countries].[Sales territory]
&lt;/expression&gt;
&lt;/dataItem&gt;
&lt;dataItem name="Order method" aggregate="none"&gt;
&lt;expression&gt;[gosales_goretailers].[Orders].[Order method]&lt;/expression&gt;
&lt;/dataItem&gt;
&lt;dataItem name="Order year" aggregate="none"&gt;
&lt;expression&gt;[gosales_goretailers].[Orders].[Order year]&lt;/expression&gt;
&lt;/dataItem&gt;
&lt;dataItem name="Product line" aggregate="none"&gt;
&lt;expression&gt;[gosales_goretailers].[Products].[Product line]&lt;/expression&gt;
&lt;/dataItem&gt;
</code></pre>
```

<p>i want to store the text value within the expression tag with its corresponding data item value using SAX parser.</p>

<p>means i want the output like this:
(1) Revenue=[gosales_goretailers].[Orders].[Revenue]
(2) Sales territory=[gosales_goretailers].[Countries].[Sales territory]...</p>

<p>I used the following code to store all text values in a list within the Expression tag </p>

```
<pre><code>      final ArrayList&lt;String&gt; dataItemList=new ArrayList&lt;String&gt;();
        final ArrayList&lt;String&gt; expressionList=new ArrayList&lt;String&gt;();
        final ArrayList&lt;String&gt; retList=new ArrayList&lt;String&gt;();
```

<p>So the user uploads a stock file csv with all of the products in. The file is formatted are follows :</p>

<pre>
productcode,size1,size2,size3,size4,size5
</pre>

<p>and has that info for each product line.</p>

<p>I have the following code which deals with the uploaded file and pulls that info from the file.</p>

```
<pre><code>&lt;?php
if (isset($_GET['uploadfile'])) {
    $file = fopen($_FILES['csvfile']['tmp_name'], 'r+');
    while(!feof($file)) {
        $line = fgetcsv($file, 0, ',');

        list($productcode, $v9cm, $v1litre, $v2litre, $v3litre, $v5litre, $v7litre) = $line;

        $stmt = $db-&gt;prepare("UPDATE stock SET 9cm = '$v9cm', 1litre = '$v1litre', 2litre =
'$v2litre', 3litre = '$v3litre', 5litre = '$v5litre', 7litre = '$v7litre' WHERE productcode =
'$productcode'");
        if ($stmt === FALSE) {
            echo "an error has occured";
        }

        $stmt-&gt;execute();
        $stmt-&gt;close();
    }
    fclose($file);
}
?&gt;
</code></pre>
```

<p>It seems to work fine and is updating each record in the database as expected, the problem I am having is if I insert a new product code.....lets say bob, so</p>

<pre>
bob,11,44,54,23,12
</pre>

<p>We create a website for a bikeshop. In the first step we will just show the product line like mountainbike, BMX, racer or children bike.
We want to describe the product line with a headline, text and a picture.</p>

<p>Is it possible to describe a product line with Schema.org?
I just found a Schema.org type for a product.</p>

31334370 Describe a product line with Schema.org

<p>My ListView contains a successfully implemented TreeView as an item source in one of my columns. However once expanded the user will need to move the mouse off of the TreeView items in order to scroll the ListView. This feels unnatural for my program and I would like to find a way to scroll the ListView even if the mouse is still over the expanded TreeView.</p>

<p>Here is the CellTemplate for the TreeView:</p>

```
<pre><code>&lt;GridViewColumn.CellTemplate&gt;
  &lt;DataTemplate DataType="workFlow:AssemblyModels"&gt;
    &lt;Grid Background="Transparent"&gt;
      &lt;Grid.ColumnDefinitions&gt;
        &lt;ColumnDefinition Width="*"/&gt;
      &lt;/Grid.ColumnDefinitions&gt;

      &lt;Grid.RowDefinitions&gt;
        &lt;RowDefinition Height="*"/&gt;
      &lt;/Grid.RowDefinitions&gt;

      &lt;TreeView Grid.Row="0"
           Grid.Column="0"
           Background="Transparent"
           Focusable="False"&gt;
        &lt;TreeViewItem Header="Product Line List"
               ItemsSource="{Binding Path=ProductLine}"
               Background="Transparent"&gt;
          &lt;TreeViewItem.ItemContainerStyle&gt;
            &lt;Style TargetType="TreeViewItem"&gt;
              &lt;Setter Property="Background" Value="Transparent"/&gt;
            &lt;/Style&gt;
          &lt;/TreeViewItem.ItemContainerStyle&gt;
        &lt;/TreeViewItem&gt;
      &lt;/TreeView&gt;
    &lt;/Grid&gt;
  &lt;/DataTemplate&gt;
&lt;/GridViewColumn.CellTemplate&gt;
</code></pre>
```

<p>Thanks in advance for any assistance that can be provided to fix this issue.</p>

<p>James</p>

<p>Okay, I know the title is a bit confusing so let me explain it a little bit more.</p>

<p>We have different groups of clients and they want to have their own app, meaning the app name, icon, splash screen and theme colour are customized. But the functionalities and features remain the same across the whole product line. </p>

<p>Of course, we can submit different app for different client. But the maintenance would be a nightmare to the development team - each new feature / bug fixes needed to be pushed to different branches and we need to do multiple app update. Furthermore, we need to do manual testing on all the variants. We do not want to go down this road.</p>

<p>As a developer, I want to have a generic app for app submission and update. But once the client signed up then we change the app name, icon and splash screen according to his settings. I know I can do the splash screen and theme color - just render a different image and RGB value from the server on login. But I do not know if there is way to changed the app name and icon after the app installation. </p>

<p>I have also done preliminary search on this question but the answer I got is a no. Since those answers are from 2011 so I wonder if the situation has changed or not.</p>

<p>Many Thanks!</p>

<p>P.S. I found a group of apps on App Store which cover the question I asked. It is called DropLocker. They have 14 variants but I guess they use the same code base. I wonder if there is an update, do they push it individually or there is a way to do a multiple app updates at one shot.</p>

31577636 Changing iOS and Android app's name and icon on th

<p>Let me start off by saying I'm not the most advanced programmer - at all. I have been put in charge of placing social media icons in the top right corner of our product line pages. I don't have the issue on my monitor, but apparently when you open up our URL in Firefox, and scroll up and down, the menu bar and background of the page shifts from white to grey. It doesn't seem to have this problem in Chrome. Any help is much appreciated!</p>

<p>I have created the following div in the CSS portion: </p>

<pre><code>.Social {
    width: 6%;
    position: absolute;
    top: -7.5em;
    left: 87%;
    font-family: Arial, Helvetica, sans-serif;
    font-size: 12px;
    font-weight: normal;
    color: #000;

}
</code></pre>

<p>Additionally, I have implemented the following HTML </p>

<pre><code><div class="fullscreen">
<div class="Social">

<img src="images/FacebookSocialIcon.fw.png" width="30px">
<img src="images/LinkedInSocialIcon.fw.png" width="30px">

</div>
</code></pre>

<p>The website URL is http://www.alliedsystems.com/home.htm </p>

<p>Our company has a rather small product line but the usage can be quite complex.</p>

<p>The current situation is that the (internal and external) documentation is spread over various places: Wiki, Adobe Indesign files, docs, text files, inline documentation in the code, help texts in the webinterface of our products etc. The documentation is written by a small group of developers but keeping track of all changes is nearly impossible if you want to update all of the other sources.</p>

<p>In general, we want to provide the following kinds of documentation (sorted by raising complexity).</p>

Quick start guide
User guide
Help texts in webinterface
Administration manual
Training manual
Internal documentation (for developers)

<p>Much of the content is the same for all of the manuals (general information), some of the content is just in the last three types and the internal documentation should contain all of the contents.</p>

<p>I've had a look at some tools which are often recommended on stackoverflow (namely DITA, docBook, pandoc, doxygen, Sphinx). Except for DITA (or DITA OT) and docBook, none of the tools seem to focus on reusable content. But those two tools also seem to be very complex and user unfriendly.</p>

<p>Of course it would be possible to use just LaTeX and include just the parts suited for the type of documentation you want to build. But this seems like a workaround solution to me.</p>

<p>So I am wondering:</p>

Is there a best pratice on how to write reusable documentation?
How do big(ger) companies manage their documentation?
Is there a way to have all documentation in a single place and compile different versions for different target groups without handling the changes by hand?

<p>While creating purchase order, If I add the same products twice , it creates two different product lines instead of updating the quantities of the same product.</p>

<p>Please anyone help me with this.</p>

31780726		How to eliminate duplicate products in odoo purchas

Duplicated attriubte set for new product line.
Attributes set show in backend and front end.
Created new attribute and added to attribute set.
New attribute show's in back end but not front end.
If I add the new attribute to the origonal set that was duplicated the new attribute will now show on the front end for the product assoiated with the duplicated attribute group.

<p>So basicly A new attribute added to a duplicate set won't show on the front end until its added to the attribute set that was duplicated. </p>

<p>I've checked to make sure the attribute is visable on front end etc and tried it several times checking the settings.</p>

<p>The goal is to be able to duplicate a attribute set and add new attributes for different product types. Then call the folder by id and display the assoiated attributes.</p>

<p>I've called the attribute group by ID (spec's). This code is working. </p>

<pre><code><?php
require_once 'app/Mage.php';
Mage::app();

$attributeGroupCollection = Mage::getResourceModel
('eav/entity_attribute_group_collection');
$product = $this->getProduct();

foreach ($attributeGroupCollection as $attributeGroup) {
    $attributeGroup->getAttributeGroupId();
$attributeSpecs = Mage::getResourceModel('eav/entity_attribute_collection')
    ->setAttributeGroupFilter(41);

}
?>
</code></pre>

<p>Help is appreciated, thanks</p>

31917563 Magento duplicate attriubte set new attributes not sh

<p>Currently, I am participating in the design of a new data warehouse. I am quite new to this topic and have a general question regarding Star Schema and Many-to-Many relationships, in particular Many-to-1/2 relationships.</p>

<p>I would like to illustrate my problem with a short example, e.g. a sales data mart. I have a fact table which is on invoice level and contains measures like total sales in $, VAT... For each of these records I have at least one seller and at the maximum two sellers. Both sellers have the same attributes so that only one simple dimension for sellers is needed. How would you model this?</p>

<p>I can imagine the following three different approaches:</p>

Joining via a Bridge Table - I prefer that one, but I am not sure about this because of the additional effort the bridge table causes through the additional join, especially for large dimensions and especially in a case like this, where a record in the fact table is only associated with one or two records in a dimension table.
Introducing two seller foreign keys into the fact table - I would use this approach only if there is in general a significant difference between both sellers. E.g. the first seller is always that one who is responsible for a product line (product line seller) and second one is always the key account manager of the customer. One the other side, this approach makes it more difficult to query the data warehouse, for example when I need the total sales of all sellers summed up for the current year regardless their role.
One record in the fact table per seller - I create a duplicate for the records which have two sellers. Through that approach I can avoid an additional join compared to the bridge table, but my fact table would be larger. In addition, during the creation of a query or report I have to consider and eliminate the duplicates if necessary. So this approach also makes it more difficult to query the data.

<p>Do you have any considerations regarding this? It would be great if you could share some knowledge. Thanks a lot.</p>

<p>I am an intern who is a complete newbie at <code>jaspersoft</code> and SQL, and am
trying to make a report that returns IP Address; Username; number of logins from this IP;
number of logins overall; date user created; last login date; product line. The condition is that
the report should only return IP addresses that have multiple users logged in from them in the
given timeframe. </p>

<p>I am having trouble with a lot of the code, as this is my first time writing SQL. So far, I have:
</p>

<pre><code>SELECT user_logins.ip_address,
users.id, users.login, users_logins.ip_logins,
users_logins.overall_logins, user_logins.logged_in_at, user_logins.logged_out_at,
user_logins.product_line
FROM user_logins
   LEFT JOIN users ON users.id = user_logins.user_id
   WHERE user_logins.logged_in_at BETWEEN ($P{start_date}::timestamp AT TIME ZONE $P
{time_zone}) AND ($P{end_date}::timestamp AT TIME ZONE $P{time_zone})
   AND ($P{include_phs} OR users.email IS NULL OR users.email !~* '@prevailhs(-test)?.com')
   ORDER BY user_logins.logged_in_at DESC
</code></pre>

<p>I know that for the conditional statement, I will have to do something like <code>count
(users_logged_in)>1</code> </p>

<p>Any insight would be appreciated! </p>

<p>Thanks! </p>

32187320 Having trouble with SQL query in jaspersoft database

<p>In Excel, I want to change the color of the row at every change in a particular row value. The changed rows could be non-consecutive.</p>

<p>For example:</p>

<pre><code>Customer Product Line Product

```
1       Outdoor      Lawn Jarts
1       Indoor       Nerf Hoops
2       Outdoor      Ball Game
3       Indoor       Fort Builder
4       Indoor       Twist'Em
4       Indoor       Silly Silly
```

</code></pre>

<p>In this example, I would want customer 1 to be light blue; customer 2, white; customer 3 light blue; customer 4, white, repeating at every customer change.</p>

<p><img src="https://i.stack.imgur.com/eFjwm.png" alt="Color Change Excel"></p>

<p>I'd prefer to use a formula if possible.
Thanks.</p>

<p>EDIT: Customer numbers are non-consecutive numbers (1,15,49406, etc.)</p>

32254209 Excel Change Row color at every change in value (non

<p>I want a regular expression for VB.NET to remove all hyperlinks in a string, including protocols https and http, full document name, subdomains, querystring parameters, so all links like:</p>

http://www.example.com
http://www.example.com/
https://www.example.com
http://www.example.com/page.html?t=7
http://example.com?q=test&sort=1
www.example.com
etc

<p>Here's the string I'm working with in which all links need to be removed:</p>

<pre><code>Dim description As String

description = "Deep purples blanket / wrap. It is gorgeous" & _
"in newborn photography. " & _
"layer" & _
"beneath the baby.....the possibilities are endless!" & _
"You will get this prop! " & _

"LIKE me on FACEBOOK for coupon codes, and to see my full product line!" & _
"http://www.facebook.com/byme"
</code></pre>

<p>according to the documentation, the Create Shipment method requires the property "items" - an array of the items being shipped, for example:</p>

```
<pre><code>{
 "tracking_number": "EJ958083578US",
 "comments": "Ready to go...",
 "order_address_id": 1,
 "items": [
  {
   "order_product_id": 15,
   "quantity": 2
  }
 ]
}
</code></pre>
```

<p>In our business, a shipment almost invariably contains ALL items from the relevant order.</p>

<p>That being the case, is there a way to create a shipment without listing all items (which would require iterating over the product line-items)? Or, alternatively, a way to include all items by default (without iterating)?</p>

<p>We are simply wishing to automate the process of adding tracking numbers to orders - which (as a manual process) involves uploading a csv with [order_number: tracking_number] - i.e. it self-evidently assumes that all items are being shipped. The API seems not to include that (very sensible) option, but I may be wrong.</p>

<p>I'm finding that when I update an order with the BigCommerce API that the Product line items of the Order are getting duplicated. It seems that even though I pass a single line item within my Order update JSON Object, I would get two Lines back (Order Products).</p>

<p>I am placing the update call as documented here: https://developer.bigcommerce.com/api/stores/v2/orders#update-an-order</p>

<p>The update is successful but my original product is now two product lines.
It appears as though BC is interpreting what I am sending as new Product lines and not replacing / updating the existing ones.</p>

<p>I am passing the 'id' for the orderProducts.</p>

<p>Is there something I need to pass to indicate the line items are to be updated and not created new?<code>enter code here</code> </p>

<p>Here is the JSON I am sending:</p>

<p><div class="snippet" data-lang="js" data-hide="false">
<div class="snippet-code">
<pre class="snippet-code-js lang-js prettyprint-override"><code>{

<p>First off, apologies for a long post. It's really more simple than it looks ;-)</p>

<p>I'm trying to do something that I think is conceptually simple, and I believe I'm most of the way there, but there's one last part that I can't implement without errors that I can't figure out how to fix.</p>

<p>I have three related tables.</p>

<p>Orders:
Each row is an Order with a unique ID, there will never be duplicates.</p>

<pre><code>+---------+---------+
| OrderID | Name |
+---------+---------+
1	Order 1
2	Order 2
3	Order 3
+---------+---------+
</code></pre>

<p>Order Details:
Relational table where each row is a product line on an order.</p>

<pre><code>+---------+-----------+
| OrderID | ProductID |
+---------+-----------+
1	a
2	b
2	c
3	a
3	b
3	b
+---------+-----------+
</code></pre>

<p>As you can see some orders have just one product (1), some will have multiple products (2) and some will have duplicate products (3).</p>

<p>Products
Each row is a product with a unique ID, there will never be duplicates.</p>

<p>I'm running a report that gives me the total of sales for a product line represented as product_line_value. I need to use this same report to run totals for combinations of product lines (if I were to create a report for each individual combination I'd be creating over 50 reports.) </p>

<p>So a report looking at the combined totals of product line A and product line B works just fine. However, I'm having trouble reflecting that information in the report. Other than looking at values in my table, there is nothing to say this report is a combination of product line A and product line B. (Remember, since I'm using the same report for over 50 combinations </p>

<p>I can't just simply title the report "Product Line A" and "Product Line B")
I tried placing product_line_value in the page header or as a group header but this only show one product line on each page, even the page totaling both product lines. </p>

<p>Also, I need to print and file each report. So if I have a month where no sales occurred I still need to print and file that report. But the report contains no information on the parameters other than the dates. In case it gets misfiled it needs to say this is the report for product line A and product line B for the month of May instead of just the month. </p>

<p>Is there a way to set up the report so that both product lines appear at the top of the page regardless of whether or not there is any data to report for a time period or do I need to create over 50 individual reports? </p>

<p>So what I'm getting is:</p>

<p>Page 1 Header: Product A
Page 1: Product A</p>

<p>Page 2 Header: Product B
Page 2: Product B</p>

<p>Page 3 Header: Product B
Page 3: Product A and B totals</p>

<p>What I want is the page header to be:</p>

<p>Page 1 Header: Product A + Product B
Page 1: Product A</p>

<p>Page 2 Header: Product A + Product B
Page 2: Product B</p>

<p>Page 3 Header: Product A + Product B
Page 3: Product A and B totals</p>

<p>Thanks</p>

<p>I've been handed a problematic Access 2007 data base solution. The problem to start with is in avoiding record locks the original designer decided to split the data into three separate data bases (based on product line) which would avoid one program manager locking out another. The second problem now is that if anyone opens any one of the three data bases, they lock out the writers who can only open in read access.</p>

<p>There are approximately 100 users globally with three or four writers, the rest being readers. The data bases are on a SharePoint site.</p>

<p>To solve the issues, I'm proposing to do the following based on research to date.</p>

<p>1) Create a split data base thereby isolating the front end user interfaces from the data repository.</p>

<p>2) Create two front end interphase databases connecting to the backend. One is for readers, the other for writers.</p>

<p>3) For the readers, I'll be adding the following code to each form's <code>Form_Load</code> event: </p>

<pre><code>   Me.AllowEdits = False
  Me.DataEntry = False
  Me.RecordLocks = 0 ' No Locks
</code></pre>

<p>This seems to work (in the limited testing that I can perform) in that it allows the readers to change column widths etc., copy from and paste elsewhere data but prevents them from locking the records for the writers and/or making any changes to the data.</p>

<p>4) For the writers the following to the same <code>On-Load</code> event:</p>

<pre><code>   Me.AllowEdits = False
  Me.DataEntry = True
  Me.RecordLocks = 2 ' Edited Record
</code></pre>

<p>This works in preventing writers from saving changes to the form but allows editing of disparate records (although Access help says <code>RecordLocks</code> applies to the Page of records which sounds like they are talking about the table, not individual records??? My tests seems to show exclusivity to the record a writer is editing, not the entire table.).</p>

<p>first thanks to all for all i learned here.</p>

<p>this is my input csv :</p>

<pre><code>TYPEµREFµCOLORµ
PRODUCTµ354µblueµ
MODELµ354µµ
MODELµ354µµ
PRODUCTµ253µgreenµ
MODELµ253µµ
MODELµ253µµ
</code></pre>

<p>the separator is {FS="µ";OFS="µ"}</p>

<p>what i have :</p>

each PRODUCT line contain a value in COLOR column.
each MODEL line contain a empty COLOR column.

<p>What i want :</p>

i want to copy Color string from each PRODUCT line in color string of each MODEL line with the same REF as PRODUCT.
(REF is the Sync KEY linking PRODUCT and MODEL.)

<p>Result i want :</p>

<pre><code>TYPEµREFµCOLORµ
PRODUCTµ354µblueµ
MODELµ354µblueµ
MODELµ354µblueµ
PRODUCTµ253µgreenµ
MODELµ253µgreenµ
MODELµ253µgreenµ
</code></pre>

<p>I am not a QWEB specialist and I try to change the standard purchase order by adding a line containing the long product description (Precise description) under each product line.</p>

<p>Can somebody help me?</p>

<p>Thanks in advance</p>

<p>L. Adam</p>

33362656	ODOO8 - Add a line containing the product long descr

<p>I have the following tree: </p>

<pre><code> library (data.tree)
data (acme)
t1<-acme
> acme
levelName
1 Acme Inc.
2 ¦--Accounting
3 ¦   ¦--New Software
4 ¦   °--New Accounting Standards
5 ¦--Research

9   ¦--Outsource_9
10   ¦--Go agile_10
11   °--Switch to R_11
</code></pre>

```
<p>I would like to replace the <code>,</code> with <code>.</code> in some Keys like <code>
[Price]</code> for instance.</p>

<p>Given this array:</p>

<pre><code>Array
(
    [0] =&gt; Array
        (
            [Product line] =&gt; Misc
            [Seller] =&gt; aaa.com
            [Tracking ID] =&gt; bbbb
            [Date shipped] =&gt; October 23, 2015
            [Price] =&gt; 60,43
            [Referral fee rate] =&gt; 3,00%
            [Quantity] =&gt; 2
            [Revenue] =&gt; 120,86
            [Earnings] =&gt; 3,62
            [Sub Tag] =&gt; xxxx
        )

    [1] =&gt; Array
        (
            [Product line] =&gt; Misc
            [Seller] =&gt; aaaa.com
            [Tracking ID] =&gt; bbbb
            [Date shipped] =&gt; October 23, 2015
            [Price] =&gt; 9,34
            [Referral fee rate] =&gt; 6,96%
            [Quantity] =&gt; 1
            [Revenue] =&gt; 9,34
            [Earnings] =&gt; 0,65
            [Sub Tag] =&gt; xxxx
        )
)
</code></pre>

<p>And the following function:</p>

<pre><code>function str_replace_specific_value($sSearch, $sReplace, &amp;$aSubject){
    foreach($aSubject as $sKey =&gt; $uknValue) {
```

<p>I am trying to write a macro to copy a range of data from different parts of a worksheet and paste it to a new worksheet. It should do this for every worksheet in the workbook with a few specified exceptions. This is the code I have written so far:</p>

<pre><code>Dim wb As Workbook
Dim ws As Worksheet
Dim Rng As Range

'create new worksheet, name it "Budget"
Set ws = Sheets.Add
ws.Name = "Budget"
'set column titles in the new sheet
Range("A1").Value = "Period"
Range("B1").Value = "Country"
Range("C1").Value = "Product Line"
Range("D1").Value = "Currency"
Range("E1").Value = "Sales"
'search the entire UsedRange of sheet
For Each ws In ActiveWorkbook.Worksheets
If ws.Name <> "Summary" And ws.Name <> "Template" And ws.Name <> "Data" Then
With ws.UsedRange
    Set Rng = .Find(What:="Product Line", _
                After:=.Cells(.Cells.Count), _
                LookIn:=xlValues, _
                LookAt:=xlWhole, _
                SearchOrder:=xlByRows, _
                SearchDirection:=xlNext, _
                MatchCase:=False).Offset(1, 0).Resize(33)
        Sheets("Budget").[F1].End(xlDown).Offset(0, -3).End(xlUp).Offset(1, 0).Resize(Rng.Rows.Count).Value = Rng.Value 'put values from the Find into C column of new sheet
     Set Rng = .Find(What:="201601", _
                After:=.Cells(.Cells.Count), _
                LookIn:=xlValues, _
                LookAt:=xlWhole, _
                SearchOrder:=xlByRows, _
                SearchDirection:=xlNext, _
                MatchCase:=False).Offset(1, 0).Resize(33)
        Sheets("Budget").[F1].End(xlDown).Offset(0, -1).End(xlUp).Offset(1, 0).Resize(Rng.Rows.Count).Value = Rng.Value 'put values from the Find into D column of new sheet

End With

<p>I'm building a filter page, with facets etc, which works as it should.
Now the our customer has a request to, basically "Be able to decide which sorting the items comes out in".
Each product is decorated with a Product Display Order, and is in a Product Line.</p>

<p>We got these example Product Display Orders:
 1. Featured Item
 2. Core Item
 3. Spare Part
 4. Utility</p>

<p>And these Product Lines:
 1. Hammers
 2. Saw
 3. Wood</p>

<p>and the sorting is like this:
Sorting should firstly be based on Product Display Orders, secondly by product lines, thirdly Alphabetically.
So all products which is a Featured Item is listed first, and all these Featured Items is then sorted by their product line, and if some product are in the same Featured Item and Product Line, then its alphabetically. </p>

<p>The challenge is: I can't just get the sorting of Product Display order items and product lines as a number on the product, i only got a name/id.</p>

<p>We've thought of Boosting based on if the product are in the different categories, but it seems a bit messy. </p>

<p>OR</p>

<p>See if it possible to have some logic in the Sorting.
Sort by productDisplayOrder:
1. featured, 2. core Item ...
Then by ProductLines:
1. Hammers, 2. Saw ...
Then by Name DESC.</p>

<p>Which way is the best way to have this sorting, is it possible to give this logic to elastic, if it is a match and then sort it. Or are we needed to twist the boosts of product?</p>

<p>This might seem asked a thousand times- and that is true- but somehow all of the answers I've tried have not worked.</p>

<p>I simply cannot find a way to remove the text-underline of links in E-mail message for Apple Mail, Gmail (Web) and Outlook 2007 (sending client). No matter what I try, It simply stays underlined on either one or all of them.</p>

<p>It doesn't matter if I simply use a few hyperlinks of a whole formatted E-mail signature, as completely below. </p>

<p>Note: "I've got "Reduce message size by removing format information not necessary to display the message" ticked off".</p>

<hr>

<p>Drop down any suggestion in the comments. I will try everything and report what works so you can convert it into an answer.</p>

<hr>

<p>Please, do not mark this as duplicate
Instead of marking this question as 'duplicate', let's create a summarized version of all possible options to remove underlining of hyperlinks</p>

<hr>

<p>My import workflow
I simply open the HTML file, select everything and copy it in Outlook signature editor. And when sending an E-mail I make sure "aA HTML" is selected, instead of 'plain text' or RTF.</p>

<hr>

<p>Tried options:</p>

<code>This is a link</code>

This is a link</code>

<p>I am trying to handle some woocommerce order data into a separate database. Everything works except the list of items. </p>

```
<pre><code>add_action( 'woocommerce_payment_complete', 'handle_order_completed' );
function handle_order_completed( $order_id ){
  $order = wc_get_order( $order_id );
  $name = $order-&gt;billing_first_name . " " . $order-&gt;billing_last_name;
  $billingEmail = $order-&gt;billing_email;
  $billingPhone = $order-&gt;billing_phone;
  $orderlink = $order-&gt;get_view_order_url();
  $products = $order-&gt;get_items();
  $orderMeta = get_post_meta($order_id, 'pass_type');

  foreach($products as $prod){
     $sql_insert = &lt;&lt;&lt;SQL
        INSERT INTO cards (cardnumber, name, phone, type, sku)
        VALUES ("$cardnumber", "$name", "$billingPhone", "$type", "$prod['product_sku']")
SQL;
    $prod['product_id'];
  }
</code></pre>
```

<p>I need to know what the array keys for the <code>$order->get_items()</code> but I can not find a list anywhere. I need the product SKU, product line total, and a custom field I added to the products. I need to use the custom field to decide how to add the other data to the DB. </p>

33851026 how to process a order items array in wordpress/woc

<p>Here is the relevant code: </p>

```
<pre><code>'hides all Location, Account, Product Line, or Sum of Total rows in column A
For Each c In r
    If c.Text = "Location" Or c.Text = "Account" Or c.Text = "Product Line" Or _
            c.Text = "Sum of Total" Then
        c.EntireRow.Hidden = True
    End If
Next c
</code></pre>
```

<p>The issue is that it is hiding most of the columns with those names in column A, but there are two sets where it is not being hidden. (There are ~15 PivotTables, and Location, Account, and Product Line are all filters; Sum of Total is a row that is blank except for that single statement in column A)</p>

<p>What could be causing this? </p>

<p>I can post the full code that I'm using if required, but for some reason it's just not reading the values in the two certain PivotTables. </p>

<p>Edit: more of the code</p>

```
<pre><code>Set r = Range("a1:a1000")

'hides all rows with no value
For Each c In r
    If Len(c.Text) = 0 Then
        c.EntireRow.Hidden = True
    Else
        c.EntireRow.Hidden = False
    End If
Next c

'unhides all the rows below each grand total row
For Each c In r
    If c.Text = "Grand Total" Then
        c.Offset(1).EntireRow.Hidden = False
    End If

Next c
```

<p>I have a select option form that is self referencing, How do I assign the SQL query to each select option? so when the user selects, that selection queries the database for that specific table and outputs to page. I have a select option for each table in the database and have created the related queries. Do I need to put the queries into an array? I am stuck on how to advance further. I have included some of the code below. Do I need to create a unique SQL query var for each user option? Any direction would be helpful. Thanks</p>

```
<pre><code>    //this is the first query it gets the count for pagination
        $sql = "SELECT COUNT(productCode) FROM products"
        or die ('Cannot Select database');

    // This  query is just to get the total count of rows
    //$sql = "SELECT COUNT(productCode) FROM products";
    $query = $dbc-&gt;query($sql);

$row = $query-&gt;fetch_row();
//this is were I am stuck
    if($_POST['productCode'] == ('productCode')) {
    // query to get code records
    $sql2 = "SELECT productCode FROM products";
}
elseif($_POST['productName'] == 'productName') {
    // query to get product name  records
    $sql3 = "SELECT productName FROM products";
} else {
    // query to get all records
    $sql4 = "SELECT * FROM products";
}
    $list = '';

    while ($row = mysqli_fetch_array($query, MYSQLI_ASSOC)) {
        $id = $row['productCode'];
        $name = $row['productName'];
        $line = $row['productLine'];
        $scale = $row['productScale'];
        $vendor = $row['productVendor'];
        $description = $row['productDescription'];
        $buy_price = $row['buyPrice'];
        $quanity = $row['quantityInStock'];
        $msrp = $row['MSRP'];
```

<p>I have a number of workbooks that link to an Access database and draw data via queries. I recently split the database to fe/be and distributed the front end to various users.</p>

<p>Some users, but not all of them cannot refresh the data in some of the workbooks. They receive the error message: "The query did not run or the table could not be opened. Check the database server or contact your database administrator. Make sure the external database is available and hasn't been moved or reorganized, then try the operation again".</p>

<p>I've tried changing the connection file in Excel's connection properties on their local machines to their personal front end, and also to my copy but got the same error message.</p>

<p>Here's the sql from one of the offending queries in case that helps identify the problem:
</p>

// Select queries
if(isset($_POST['productCode'])){
   $sql = "SELECT productCode FROM products ORDER BY productCode DESC $limit";
   $query = $dbc-&gt;query($sql);
   }
```

<p>I have a query that looks like this:</p>

```
<pre><code>SELECT  d.account_id,
        d.product,
        d.month,
        sum(d.spend),
        u.lifetime_product_spend
  FROM FLATTEN(data_source, product) d
  LEFT JOIN (SELECT  account_id,
          product,
          SUM(product_spend)/1000000 lifetime_product_spend
          FROM usage
          GROUP BY account_id, product) u
  ON (d.account_id = u.account_id AND d.product = u.product)
  WHERE d.month &gt;= DATE_ADD(today ,-5,"MONTH")
  GROUP BY d.account_id, d.product, d.month, u.lifetime_product_spend
</code></pre>
```

<p>Due to the sheer amount of data, I'm only able to include the last 6 months data. That's why I'm calculating the lifetime spend in a different table and joining them. The output looks like this:</p>

```
<pre><code>table: monthly
account_id      product       month      spend     lifetime_product_spend
================================================================================
=======
  A          product1       1         10              50
  A          product1       2         20              50
  A          product1       3         30              50
  A          product2       1         5              20
  A          product2       2         15              20
  B          product2       2         100             100
  B          product3       2         100             150
  B          product3       3         50             150
  C          product3       1         100             500
  C          product3       2         400             500
</code></pre>
```

<p>The problem is, for products with spend prior to the 6 months, those product line items do not get included because of the WHERE DATE_ADD filter. I tried a RIGHT JOIN to the subquery, but I think the WHERE parameter overrides that. I'd like to include the product line-items that

```
<p>I have a requirement where I have to read some data and then reformat such that each part
of the data is in new line.
For instance, the data I have is:<b><br/><br/>dataLine1* dataLine2* dataLine3* dataLine4*
dataLine5</b>
<br/><br/>and result I expect is:<b><br/><br/>
dataLine1<br/>* dataLine2<br/>* dataLine3<br/>* dataLine4<br/>* dataLine5</b></p>

<p>So basically, it boils down to <b>replacing * with 'newlinecharater*'</b>. However, I am still
at beginners level in XSL and not sure how to achieve this.</p>

<p>The code I have is:</p>

<pre><code>&lt;!-- START: Code to replace the data within a string since I am working on XSLT
0.1 --&gt;
   &lt;xsl:template name="string-replace-all"&gt;
    &lt;xsl:param name="text" /&gt;
    &lt;xsl:param name="replace" /&gt;
    &lt;xsl:param name="by" /&gt;
    &lt;xsl:choose&gt;
      &lt;xsl:when test="contains($text, $replace)"&gt;
        &lt;xsl:value-of select="substring-before($text,$replace)" /&gt;
        &lt;xsl:value-of select="$by" /&gt;
        &lt;xsl:call-template name="string-replace-all"&gt;
          &lt;xsl:with-param name="text"
          select="substring-after($text,$replace)" /&gt;
          &lt;xsl:with-param name="replace" select="$replace" /&gt;
          &lt;xsl:with-param name="by" select="$by" /&gt;
        &lt;/xsl:call-template&gt;
      &lt;/xsl:when&gt;
      &lt;xsl:otherwise&gt;
        &lt;xsl:value-of select="$text" /&gt;
      &lt;/xsl:otherwise&gt;
    &lt;/xsl:choose&gt;
  &lt;/xsl:template&gt;
&lt;!-- END: Code to replace the data within a string since I am working on XSLT 0.1 --&gt;
&lt;xsl:variable name="CPC" select="./_line_item_comment"/&gt;
&lt;xsl:variable name="newline"&gt;&lt;xsl:text&gt;&amp;#10;&lt;/xsl:text&gt;&lt;/xsl:
variable&gt;
  &lt;xsl:variable name="myVar"&gt;
    &lt;xsl:call-template name="string-replace-all"&gt;
      &lt;xsl:with-param name="text" select="substring-after($CPC,'!$!')" /&gt;
      &lt;xsl:with-param name="replace" select="'*'" /&gt;
```

<p>I have this SQL statement which is close to what I want:</p>

<pre><code>SELECT CustomerList.*, Sales.Sales, Sales.MonthYear
FROM (CustomerList INNER JOIN WhoBuysWhat ON CustomerList.CustomerID =
WhoBuysWhat.CustomerID) LEFT JOIN Sales ON CustomerList.CustomerID = Sales.CustomerID
WHERE WhoBuysWhat.ProductID=2
ORDER BY CustomerList.CustomerName;
</code></pre>

<p>That gives me all the customers that buy a certain product line and any sales from the Sales table for that product line. But what I want is to add another WHERE statement. I want the first INNER JOIN to give me all the customers that buy productID 2. Then I want to Left Join the sales for ones that match sales.monthyear=#1/1/2015#. So I tried this (in different ways):</p>

<pre><code>SELECT CustomerList.*, Sales.Sales, Sales.MonthYear
FROM ((CustomerList INNER JOIN WhoBuysWhat ON CustomerList.CustomerID =
WhoBuysWhat.CustomerID) WHERE WhoBuysWhat.ProductID=2) LEFT JOIN Sales ON
CustomerList.CustomerID = Sales.CustomerID
WHERE Sales.MonthYear=#1/1/2015#
ORDER BY CustomerList.CustomerName;
</code></pre>

<p>And that doesn't work. If I do this:</p>

<pre><code>WHERE WhoBuysWhat.ProductID=2 AND Sales.MonthYear=#1/1/2015#
</code></pre>

<p>OR</p>

<pre><code>WHERE Sales.ProductID=2 AND Sales.MonthYear=#1/1/2015#
</code></pre>

<p>It only gives me the customers that have sales in that month. I want ALL customers that buy that line and ANY sales for a GIVEN month. Is that possible in 1 SQL statement? Do I need to use AS for the first joined tables? I cannot find anything that will help me.</p>

<p>J_K_M_A_N</p>

<p>EDIT:
This is the final working SQL statement if anyone cares or needs help later.</p>

<pre><code>SELECT CustomerList.*, Sales.SalesID, Sales.Sales, WhoBuysWhat.ExtraID

```
<p>Basically in their shopping cart I would like to display the image they upload to print but i
can't seem to figure it out..... I know i need to add in something along the lines of <code>&lt;
img src="http://path/to/thumbnails/myimage.jpg"&gt;</code> but i don't know what to add in
place of  "<a href="http://path/to/thumbnails/myimage.jpg" rel="nofollow">http:
//path/to/thumbnails/myimage.jpg</a>" within this code to display the image they upload if
there even is anything? All help appreciated! Thanks (sorry if this is a silly question and plain
obvious)</p>

<pre><code> {% comment %}

      This is your /cart template. If you are using the Ajaxify Cart plugin,
      your form (with action="/cart") layout will be used in the drawer/modal.

      For info on test orders:
        - General http://docs.shopify.com/manual/your-store/orders/test-orders
        - Shopify Payments - http://docs.shopify.com/manual/more/shopify-payments/testing-
shopify-payments

    &lt;!-- Bold: Options 4-1 --&gt;
    &lt;script&gt;function update_qty_builder(builder_id, qty){ jQuery('.'+builder_id+"_qty").val
(qty.value); } function remove_product_builder(builder_id){ jQuery('.'+builder_id+"_qty").val
(0); jQuery('.'+builder_id+"_qty").parents("form").submit(); }&lt;/script&gt;
    {% include 'bold-cart-handler' %}
    &lt;!-- // end Options 4-1 --&gt;

    {% endcomment %}
    {% if cart.item_count &gt; 0 %}

      &lt;form action="/cart" method="post" novalidate class="cart"&gt;

        &lt;div class="section-header"&gt;
          &lt;h1 class="section-header__title"&gt;{{ 'cart.general.title' | t }}&lt;/h1&gt;
        &lt;/div&gt;

        &lt;div class="cart__row medium-down--hide cart__header-labels"&gt;
          &lt;div class="grid--full"&gt;
            &lt;div class="grid__item large--one-half push--large--one-half"&gt;
              &lt;div class="grid--full"&gt;
                &lt;div class="grid__item one-third medium-down--one-third"&gt;
                  &lt;span class="h4"&gt;{{ 'cart.label.price' | t }}&lt;/span&gt;
                &lt;/div&gt;
```

<p>Just cant seem to get magmi to import/work correctly.
My CSV test file is only 27 lines including the header. </p>

<p>My header is as follows:</p>

<pre><code>store, type_id, status, visibility, manage_stock, attribute_set, tax_class_id, weight, sku, name, price, cost, qty, description, short_description, manufacturer, vendor, color, size, product_id, upc, root_category, categories, is_in_stock, image, small_image, thumbnail, media_gallery
</code></pre>

<p>Example of the data:</p>

<pre><code>admin, simple, Enabled, 4, 1, Default, Taxable Goods, 0.25, 400100433072, Daewon Song Gold/Purple, 21.99, 10, 1, Daewon Song Gold/ Purple, ear buds, ear buds, LOUD HAPPY HOUR, gold purple, 02-02-0009, 400100433072, Default Category, accessories/earbuds 1, /accessories/400100433072.jpg, /accessories/400100433072.jpg
</code></pre>

<p>Within Magento I added vendor,product_id, and upc as attributes and assigned them to the Default attribute set group. </p>

<p>When I do the import it
creates the very first item/product. (though where does one see custom attributes ?)
It does not create any of the Categories/sub categories. Including for the 1 product it does insert.
It creates an empty attribute per product line (IE 26)
No Yes No Global No No No (Magento Manage Attrib section)</p>

<p>Within magmi (0.7.2.2) I have set:
Attribute Set Importer
Import Report Mail Notifier
Magmi Optimizer
On the fly category creator/importer
Image attributes processor
On the fly indexer
Magento 1.9.2.2</p>

<p>Update - 1-20-16</p>

<p>So far to get magneto Check Data to not error

<p>Here is my test bunny sheet: <a href="https://docs.google.
com/spreadsheets/d/151h1XjB98NOBnO0otNaql3ASjK84CccZZ399dX4BMBM/edit?
usp=sharing" rel="nofollow">https://docs.google.
com/spreadsheets/d/151h1XjB98NOBnO0otNaql3ASjK84CccZZ399dX4BMBM/edit?
usp=sharing</p>

<p>What I am trying to accomplish:</p>

User inputs sales order on the 'salesOrder' Sheet
<p>User submits sales order</p>
<p>a) sales order info is written to 'OrderKey' Sheet
b) the header info (Date, Company, Purchase Order, Sales Order, Contact, email, phone, comments, ship via, account) is repeated for every Product Line Item entered into the sheet into the 'OrderKey' Sheet</p>

<p>Having troubles figuring out how to go about doing this.</p>

<p>I have now created a 'kludge' sheet to formulaically copy over live information from the 'salesOrder' Sheet.</p>

<p>I named it kludge because It is not an elegant way of solving my problem, and not as I would be hoping to solve it.</p>

<p>At any rate, the 'kludge' method is not working due to appending NULL DATA... so how do I copy over only not null data? </p>

```
<pre><code>function onOpen() {
 var ui = SpreadsheetApp.getUi();
 // Or DocumentApp or FormApp.
 ui.createMenu('Custom Menu')
     .addItem('Submit Sales Order', 'menuItem1')
     .addToUi();
}

function menuItem1() {
   var ss = SpreadsheetApp.getActive();
 var sheet = ss.getSheetByName("kludge");
 var sourceInfo = sheet.getRange("A:N65");
```

<p>I have a website app http://firstusadata.com/cash_flow_test/ that I would like to add some functionality to, yet have been unsuccessful. </p>

<p>The idea is to be able to add a vendor information form with one button click, and then be able to add products to that specific vendor information form with a different button click. The image below shows the Vendor Information Button as well as the add product button. </p>

<p>Vendor and Product Button areas</p>

<p>Currently if I remove the dynamic html function for the vendor information form (div id=" dynamic_content_1"), as seen below, the add product button works and it will append the new product line underneath the previous. I believe my error is located somewhere in this area, but I am unsure. </p>

<p><div class="snippet" data-lang="js" data-hide="false">
<div class="snippet-code">
<pre class="snippet-code-js lang-js prettyprint-override"><code>function dynamic_html(){
  var content = '<div id="dynamic_content_1">'
 +'<div class="row">'
  +'<div class="col-sm-8 col-sm-offset-2 SecPageMain">'
            +'<h3>Vendor Information</h3>'
   +'<form method="post" action="http://firstusadata.com/cash_flow/companies/insert_company_information">'
    +'<div class="row margin_top_25">'
     +'<div class="col-md-4 col-md-offset-1 col-sm-12">'
      +'<p>Name of Company:</p>'
     +'</div>'
     +'<div class="col-md-6 col-sm-12">'
      +'<input type="text" class="form-control pull-left w100" name="company_name" required='' >'
     +'</div>'
    +'</div>'
    +'<div class="row margin_top_25">'
     +'<div class="col-md-4 col-md-offset-1 col-sm-12">'
      +'<p>Company Phone Number:</p>'
     +'</div>'

     +'<div class="col-md-6 col-sm-12">'
      +'<input type="text" class="form-control pull-left w100" id="" name="company_phone"

<p>I'm trying to write a query like the below. The table hnh contains a list of set products each with productimage, rangecode(type), itemnumber, price, description etc. SALESORDERHISTORY is a list of individual sales lines over the last year with columns for account, itemnumber, rangecode, salesqty and confirmeddate.</p>

<p>Aggregate functions are required in the query to select the last 3 months sales for each product line per selected customer, same for 12 months sales. This could change or average sales quantity.</p>

<pre><code>select hnh.image,
    hnh.rangecode,
    hnh.itemnumber,
    hnh.producttype,
    hnh.productdescription,
    hnh.price,
    count(distinct a.SalesQty) as '3MonthSales',
    count(distinct b.SalesQty) as '12MonthSales',
    hnh.CurrentStock
    from HNHPRODUCTS hnh
inner join (select SALESQTY, itemid, configid, account from SALESORDERHISTORY
    where confirmeddate > DATEADD(month, -3, getdate())) a on a.rangecode = hnh.
rangecode and a.itemnumber = hnh.itemnumber and a.account = '1234'
inner join (select SALESQTY, itemid, configid, account from SALESORDERHISTORY
    where confirmeddate > DATEADD(month, -12, getdate())) b on b.rangecode = hnh.
rangecode and b.itemnumber = hnh.itemnumber and b.account = '1234'
</code></pre>

<p>I've seen quite a few examples but all with only one subquery, one aggregate function and no images. Help much appreciated.</p>

35298575 SQL select image, aggregate functions with subquerie

<p>This is the scenario:</p>

One table with 5 rows.
Row 1 - displays total purchase.
Row 2 - displays total Fruits purchase.
Row 3 - displays total Vegetables purchase.
Row 4 - Is a fruits table with n fruits, generated dynamically with php.
Row 5 - Is a vegetable table with n vegetable, generated dynamically with php.

<p>As you can see in the fiddle link, the user must choose the quantity of a specific product, so the final price for this product is updated and the total and group price as well.</p>

<p>I could do this using jquery, but I would like to accomplish this task using AngularJs.</p>

<p>I've started to code. But so far I have one issue. It dipslays <code>$NaN</code> in the total product line.</p>

So, how to avoid display this <code>$NaN</code> when there is nothing inside quantity?

How to link the 3 totals fields to each individual products group?

<p>Note. The approach I have used is not the best one. Feel free to change the approach.
Any suggestion? JSFIDDLE</p>

<pre><code><table style='width:100% ;border: 2px solid #00BABF;' ng-app=''>
 <tr>
 <td>Total: $</td>
 </tr>

 <tr>
 <td>Fruit: $</td>
 </tr>

 <tr>
 <td>Veget: $</td>
 </tr>

<p>We Have an issue in Adding a product to opportunity product form.From the outset it looks related to the currency field: When putting any value in for Price Per Unit - a red circle with a white x displays the message "A currency is required if a value exists in a money field. Select a Currency and Try again."
Actually the issue came when we are trying to navigate from Opportunity form to our Opportunity Product Form with the help of custom javascript. If we navigate to opportunity Product form as it was before by clicking subgrid of the Product items in Opportunity form. The error doesn't show.
Here is My error of the Price Per Unit field </p>

<p>The kicker is that there is no currency on the 'product line items' form. My first approach was to add the currency field so that we can manually enter it - this resulted in the currency field showing (but with a grey Lock icon)</p>

<p>Currency Field Added to Form</p>

<p>Any help would be appreciated....</p>

35897720 Adding Price Per Unit in Opportunity Product Dynami

<p>I created a list of sales in the frontend pros "resellers" can refer to. It turns out that when a person buys two items (add him twice on the stand, ie two products one each) it only displays the custom of the first item options. I made a foreach, taking purchases containing the product X, in which case, only displays the purchase and personalized first product options.</p>

<p>So I need to get the products by Product Line and then check ID</p>

<p>Anyone know how to "filter" by product and "line" purchase? Or someone removes another solution?</p>

<p>Code.</p>

<pre><code>   <div class="page-title">
<h1><?php echo $this->__('Meus Eventos') ?></h1>
 </div>
     <?php echo $this->getMessagesBlock()->getGroupedHtml() ?>
   <!--<iframe width='100%' height="700" frameborder='0' src='http://storage.foodpass.com.br/export.php'></iframe>-->

  <?php

  $i = 0;
  Mage::getSingleton("core/session", array("name" => "frontend"));
  $session = Mage::getSingleton("customer/session");
  if($session->isLoggedIn())
 {
 $customer = Mage::getSingleton('customer/session')->getCustomer();
 $nome = $customer->getEmail();
 }
 ?>

 <?php
 $collection = Mage::getModel('catalog/product')
->getCollection()
->addAttributeToFilter('email_parceiro', $nome)
->addAttributeToSelect('*');
$parceiro = false;
$i = "0";
$table = "0";
foreach ($collection as $product) {
 $parceiro = true; //se parceiro tem evento já vendido

<p>I have been stuck on this for a while now and cannot for the life of me understand why the SQL is not pulling through what I want. It seems simple and I know it's simple but I can't get the right numbers.</p>

<p>I have some code to pull data from joined tables on our database showing customer numbers, products purchased, date purchased along with product price and quantity of that product line. When I set between dates and GROUP by date, it works perfectly and pulls through all the right info.</p>

<p>What I want is to GROUP by product, summing the quantity of products purchased within a date range for each customer. When I try to sum(SIL.ILQTY) the sum over calcualtes this value.......I have tried Sum with CASE which also fails. I have the code below and have filter the records to make testing easier so only shows one product and one customer with 7 purchase dates for that product.</p>

<p>The following code shows records by date which works:</p>

```
<pre><code>SELECT SIH.SICUST, SIL.ILPROD, date(SIL.ILDATE), SIL.ILNET, SIL.ILQTY,
       SIL.ILQTY*SIL.ILNET, SIH.SICUST || ' ' ||  rtrim(SIL.ILPROD) || ' '
FROM NWBAKERS.BPCSF.IIM IIM,
     NWBAKERS.BPCSF.SIH SIH,
     NWBAKERS.BPCSF.SIL SIL
WHERE SIH.SIINVN = SIL.ILINVN
  AND IIM.IPROD = SIL.ILPROD
  AND ((date(SIL.ILDATE) between '02/01/2016' and '02/29/2016'))
  and SIL.ILWHS ='PR'
  and SIL.ILQTY &gt; '0'
  and SIH.SICUST = '40634'
  and SIL.ILPROD = '81039'
GROUP BY SIH.SICUST, SIL.ILPROD, date(SIL.ILDATE), SIL.ILQTY, SIL.ILNET
</code></pre>
```

<p>The problem is when I remove the date(SIL.ILDATE) from the group by statement and sum (SIL.ILQTY) in the select statement in order to get the Unique customer number which purchased the total number of unique products(ILQTY) in the date range specified. </p>

<p>Can anyone point me in the right direction please????</p>

<p>Sample Data Image for above:</p>

<p><img src="https://i.stack.imgur.com/8StF1.png" alt="image"></p>

<p>I am developing a very simple shopping cart where each of the items (courts) in the store has a button next to it, a + if the item is not in the cart and an x if the item is in the cart. When you click on the button I am submitting jQuery/AJAX/PHP to update the cart information and totals as well as change the button in the product list to an x, and vice versa. </p>

<p>Here is the product line in the store</p>

<pre><code><div id="courtline" class="courtline<?php echo $row_Courts['systemID']; ?>">
<a href="#" func="add" stateName="<?php echo $_SESSION['state'];?>" systemID="<?php echo $row_Courts['systemID'];?>" courtSystemID="<?php echo $row_Courts['courtSystem_SystemID']; ?>" userID="<?php echo $_SESSION['userid']; ?>" id="addCourtLinkADD" class="addCourtLinkADD" >
</div>
</code></pre>

<p>And here is my jQuery. It makes 3 AJAX calls... </p>

Update the database by adding or removing a product from the shopping cart...
Update the product list by changing the button to a + or x depending on whether the product is in the cart... it also changes the 'func' parameter to match the button.
update a totals div in the cart.

<p>.</p>

```
<pre><code>$(" #courtline" ).on( "click","a",function( e ) {
  e.preventDefault();
  var func = $(this).attr("func");
  var stateName =  $(this).attr("stateName");
  var courtID = $(this).attr("systemID");
  var userID = $(this).attr("userID");
  var courtSystemID = $(this).attr("courtSystemID");
  var stateID = $(this).attr("systemID");

  // update the court list in the cart
  $.ajax({

    type: "GET",
```

<p>I am using the Magento Ultimo theme. I have created a custom block in local.xml</p>

<pre><code><action method="addTab" translate="title" module="catalog">
<alias>basic_line</alias>
<title>Basic Line Info</title>
<block>catalog/product_view_attributes</block>
<template>catalog/product/view/basic_line.phtml</template>
</action>
</code></pre>

<p>I've also created the appropriate basic_line.phtml file, which contains:</p>

<pre><code><?php
if (Mage::getModel('catalog/product')->load(Mage::registry('current_product')->getId())-
>getAttributeText('basic_line') == "Ja") {
?>
<div class="basic-line-info">
<?php
echo $this->getLayout()->createBlock('cms/block')->setBlockId('block-basic-line')-
>toHtml();
?>
</div>
<?php
}
</code></pre>

<p>?></p>

<p>I have an attribute called basic_line, if it is set to yes the div will show. If it is set to no, the div won't show. This is working fine. However, the tab "Product Line Infos" will always be displayed on the product detail page, even if there is no content in that tab. How can I fix this? The tab should only be displayed if the attribute is set to yes - however, at the moment I can only hide it by leaving the template empty, which is no solution.</p>

<p>Do you have any ideas?</p>

<p>Is It possible retrieve custom taxonomy data inside another custom taxonomy in WordPress admin?</p>

<p>For example, I have this hierarchy:</p>

<p>Categories -> Product Lines -> Product</p>

<p>A product belongs to one Line which belongs to one category.</p>

<p>So, I was planning to create one taxonomy for Categories and one taxonomy for Product Lines. And inside the product, I would like to put some select with categories data and product lines data.</p>

<p>I've been thinking in this way, because the client could update the categories and product lines, and appear updated inside the product, and his just has to select the product category and product line.</p>

<p>Is possible?</p>

36463672 Using Multiple Taxonomies in WordPress

<p>I am a newcomer to XML/XSLT and, so far, in searching SO and the W3SChools sites for clever stuff on Meunchian grouping I haven't been able to grasp an effective solution to my challenge.</p>

<p>Essentially I have one large XML file exported from a database (which means I can't directly edit the XML) which contains invoicing information. </p>

<p>I want to utilise XSLT (1.0) to apply a transformation of the XML into HTML (I am using Saxon) so that each invoice is displayed as a table. However, in the XML, there are many product lines which relate to the same invoice (denoted by the <code><invoiceNum></code> element as the identifier). </p>

<p>I don't want to have to create & display a new table for each product line which is part of the same invoice. In my current XSL file, I am trying to create a table for the first instance of a duplicated <code><invoiceNum></code> element, and then add only the unique elements from successive product lines (<code><ProductID></code>, <code><ProductName></code>, <code><ProductDescription></code> etc.) and leave out the duplicated shipping information. </p>

<p>In the XML code snippet, you can see the layout of the XML. In the XSL snippet, I hope you can see how I am trying to construct the table. For each successive <code><invoices_snet></code> instance in the XML file, I want to add just the product information to the table through the transformation. Using <code>for-each</code> on the <code><invoices_snet></code> element simply creates a new table each time.</p>

<p>Should I use conditional logic here, compare the equality of the value of the <code><invoices_snet></code> element, use templates?</p>

<p>Your help is much appreciated!</p>

<pre><code> <database>
 <invoices>
  <invoices_snet>
   <invoiceNum NAME="invoiceNum" TYPE="SMALLINT">368</invoiceNum>
   <ProductID NAME="ProductID" TYPE="VARCHAR">SS106</ProductID>
   <ProductName NAME="ProductName" TYPE="VARCHAR">Senna Sunglasses</ProductName>
   <ProductDescription NAME="ProductDescription" TYPE="VARCHAR">Lively sunglasses</ProductDescription>
   <Quantity NAME="Quantity" TYPE="SMALLINT">34</Quantity>
   <UnitPrice NAME="UnitPrice" TYPE="CURRENCY">40.0000</UnitPrice>

<p>I have following view with Category (dropdown list) and price value. So,one can easily select any item from dropdown list and put a price and then create a product line. But I want to make dropdown list auto selected based on the price range added by the user. For example, if the price is lower than 100 bucks then it is ordinary, if it is between 100-500, then it is silver, and if the price is more than 500 then my category is considered as gold.</p>

```
<pre><code>&lt;label for="exampleInputEmail1"&gt;Category&lt;/label&gt;
&lt;div class="form-group"&gt;
   &lt;div class="col-md-10" style=""&gt;
      @Html.DropDownListFor(model =&gt; model.Category, new[] {
     new SelectListItem() {Text = "Ordinary"},
     new SelectListItem() {Text = "Silver"},
     new SelectListItem() {Text = "Gold"},
   }, " ◦◦o Kateqoriya", new { @class = "form-control" })
      @Html.ValidationMessageFor(model =&gt; model.Cateqoriya, "", new { @class = "text-
danger" })
   &lt;/div&gt;
&lt;/div&gt;
&lt;label for="exampleInputEmail1"&gt;Price&lt;/label&gt;
&lt;div class="form-group"&gt;
   &lt;div class="col-md-10"&gt;
      @Html.EditorFor(model =&gt; model.Price, new { htmlAttributes = new { @class = "form-
control" } })
      @Html.ValidationMessageFor(model =&gt; model.Price, "", new { @class = "text-danger" })
   &lt;/div&gt;
&lt;/div&gt;
</code></pre>
```

36624905 How to automatically assign a value based on price ra

<p>I am pretty new to https so if say something inaccurate I am sorry.
I have running php server that was rewritten in java and now I need to test if it was rewritten correctly. I need to write a test that will listen to all post request on php, runs it on java server and compares java and php responses. Ideally saves responses on disc and compares files.</p>

<p>Problem is there seems to be very little on this topic and after intensive googling I have found technologies that could maybe help me. HtmlUnit dropWizard or software product line. Problem is I have no experience with any of them and from overview they are all time consuming just to set up. </p>

<p>Web server is https with client autorization and I am using mySQL database</p>

<p>Do you have any experenice with any of these technologies or any advice how should I tackle this problem? Any tips or pointers would be most welcome.</p>

36652595 Testing correctnes of rewritten server from php to ja\

<p>I am having the hardest time programmatically creating an order in WooCommerce. I am using the code below and is DOES create an order BUT I cannot get customer information OR product line items added to the order. The new order that is create is simply as Guest with no items, user information, etc. </p>

<p>The issue seems to be that once the order object is created, it is failing when trying to add data to the order.</p>

```
<pre><code>function create_vip_order() {

  global $woocommerce;

  $address = array(
      'first_name' =&gt; '111Joe',
      'last_name'  =&gt; 'Conlin',
      'company'    =&gt; 'Speed Society',
      'email'      =&gt; 'joe@testing.com',
      'phone'      =&gt; '760-555-1212',
      'address_1'  =&gt; '123 Main st.',
      'address_2'  =&gt; '104',
      'city'       =&gt; 'San Diego',
      'state'      =&gt; 'Ca',
      'postcode'   =&gt; '92121',
      'country'    =&gt; 'US'
  );

  // Now we create the order
  $order = wc_create_order();

  // The add_product() function below is located in
/plugins/woocommerce/includes/abstracts/abstract_wc_order.php
  $order-&gt;add_product( get_product( '275962' ), 1 ); // This is an existing SIMPLE product
  $order-&gt;set_address( $address, 'billing' );
  //
  $order-&gt;calculate_totals();
  $order-&gt;update_status("Completed", 'Imported order', TRUE);

}

add_action( 'woocommerce_init', 'create_vip_order' );
</code></pre>
```

<p>I have two models related like this:</p>

<pre><code>class Report(Model):
    ...
    product_line = models.OneToOneFiled(ProductLine)

class ProductLine(Model):
    name = models.CharField()
    ...
</code></pre>

<p>I want users to upload a report and specify which product line it belongs to. The product line field should be a dropdown list with predefined product names in it.</p>

<p>My question is how to render this field and how to analysis the value posted back.</p>

<h2>Rendering</h2>

<p>For rendering, I guess I can do this:</p>

<pre><code>render():
    allProducts = ProductLine.objects.all() // side question: how to cache this queryset for repeated use?
    names = []
    for p in allProducts:
        names.push(p.name)
    return render(..., {'names': names})
</code></pre>

<p>Inside the template, I can loop over <code>names</code> and populate the items of the dropdown list. Am I correct?</p>

<h2>Saving</h2>

<p>When saving:</p>

<pre><code>postHandler():
    // This is the part I am not so sure
    // Since the value for the product line field will be a string
    // I guess I cannot rely on a form object to validate it and expect
    // it to pass, am I correct?

```
<p>If I run this:</p>

<pre><code>SELECT
  NON EMPTY
    [Measures].[Internet Sales Amount] ON COLUMNS
 ,NON EMPTY
    {
      Hierarchize
      ( EXISTING
        {
          [Product].[Product Categories].[Product].&amp;[483]
         ,[Product].[Product Categories].[Product].&amp;[486]
         ,[Product].[Product Categories].[Product].&amp;[478]
         ,[Product].[Product Categories].[Product].&amp;[479]
         ,[Product].[Product Categories].[Product].&amp;[477]
         ,[Product].[Product Categories].[Product].&amp;[484]
         ,[Product].[Product Categories].[Product].&amp;[485]
         ,[Product].[Product Categories].[Product].&amp;[317]
         ,[Product].[Product Categories].[Product].&amp;[316]
         ,[Product].[Product Categories].[Product].&amp;[583]
         ,[Product].[Product Categories].[Product].&amp;[311]
         ,[Product].[Product Categories].[Product].&amp;[594]
        }
      )
    } ON ROWS
FROM [Adventure Works]
WHERE
  [Product].[Product Model Lines].[Product Line].&amp;[M];
</code></pre>

<p>I get this:
<a href="https://i.stack.imgur.com/vhgc3.png" rel="nofollow noreferrer"><img src="https://i.
stack.imgur.com/vhgc3.png" alt="enter image description here"></a></p>

<p>Whereas if we comment out the <code>EXISTING</code> keyword:</p>

<pre><code>SELECT
  NON EMPTY
    [Measures].[Internet Sales Amount] ON COLUMNS
 ,NON EMPTY
    {
      Hierarchize
```

<p>I have used the uib-typeahead directive as follows :</p>

<pre><code><input type="text" id="search-box" class="form-control" data-ng-model=" searchBar.search.searchString"
typeahead-on-select="searchBar.gotoPartDetails($item, $model, $label, $event)" uib-typeahead="result as result.partNumber+' '+result.lineDesc+' '+result.partDesc for result in searchBar.textTyped($viewValue)"
placeholder="Search by part number, product type, product line, keyword" typeahead-focus-first="searchBar.search.firstSelect" typeahead-popup-template-url=" app/components/header/search-bar/typeahead-popup.html" typeahead-template-url=" {{searchBar.search.typeaheadTemplate}}"
data-ng-focus="searchBar.focus()" data-ng-blur="searchBar.blur()">
</code></pre>

<p>I am basically using the "<code>searchBar.search.firstSelect</code>" scope variable to enable or disable first select. On controller load <code>searchBar.search.firstSelect</code> is set to false and based on the size of the length data displayed. If the typeahead is showing just one data in the options I am setting <code>searchBar.search.firstSelect</code> to true. But this is not reflecting in the UI. What do I do?</p>

36937453 Why is typeahead-focus-first="scopeVariable" is not u

<p>Same product showing up twice on invoice. I grouped the report by invoice number and now because of this also grouped it by Product ID. </p>

<p>I have a formula that supplies the shipping qty @qtyshipped. </p>

<p>I have this formula in set up in a running total #tlt_QtyShipped so I can combine the two qty shipped from the duplicate product together.</p>

<p>This running total is placed in a group footer. In this same group footer I have a formula field frmExtendedPrice that calculates extend price for the product line. </p>

<p>I'm trying to use the running total #tlt_QtyShipped * Base Price in this formula. </p>

<p>When trying to run I get the following error:</p>

<p>I have a problem when i View my html page in PDF-form.  The problem is that when the
number values are to big then it breaks the line between the minus symbol and values.</p>

<p>Here is an example of the hmtl page, it works perfect
<a href="http://i.stack.imgur.com/VULRU.png" rel="nofollow">enter image description
here</a></p>

<p>Then when i convert it to a PDF it looks like this:
<a href="http://i.stack.imgur.com/1Tl5t.png" rel="nofollow">enter image description
here</a></p>

<p>Here i Render my page to a full html document:</p>

<pre><code>def document_to_html_document(document):
"""
Renders the invoice to a full html document with &lt;html&gt;, &lt;head&gt;, and &lt;body&gt;
tags.
"""
return render_to_string('invoice_print.html', {
    'body': document_to_html(document),
    'document': document,
    'base_url': settings.SITE_BASE_URL
})
</code></pre>

<p>The code where i build the HTML string and converting it to a pdf:</p>

<pre><code>def document_to_pdf(document, server_base_url, target=None):
    # Build HTML string
    html = document_to_html_document(document)

    # Setup input and output files
    html_file = tempfile.NamedTemporaryFile(suffix='.html')
    html_file.write(document_to_html_document(document).encode())
    target = target or tempfile.NamedTemporaryFile()

    # Convert to pdf
    command = 'xvfb-run wkhtmltopdf --footer-right "[page]/[topage]"{s}  {o}'.format(
    s=html_file.name,
    o=target.name
    )
```

<p>I have built a small data warehouse using the Adventure works database. I have deployed it to SQL Studio Manager. I have written my first MDX query</p>

<pre><code>select
customer.[full name].members on rows,
order (measures.[sales amount],asc) on columns
from [Adventure Works DW2012]
</code></pre>

<p>Please see the screenshot below:</p>

<p><img src="https://i.stack.imgur.com/lu9Zr.png" alt="enter image description here"></p>

<p>I understand that the top level of the hierarchy are dimensions i.e. Customer, Date, Due Date, Interne Sales, Order Date, Product and Ship Date. I understand that dimensions have attributes. For example: Model Name, Product Line, Product Name are attributes of the Product dimension and Product Model Lines is a hierarchy of the Product dimension.</p>

<p>What is meant by: Financial; History and Stocking? </p>

37111339 Understanding the Cube display in SQL Studio Manag

<p>I am working with an ERP that stores its retail sales and any discounts related to that sale as separate lines in the same table.</p>

<p>Product lines are identified by a line type of 0 whereas discount lines are a line type of 6, and loyalty discount is a line type of 7.</p>

<p>Unfortunately, the discount records do not have any direct relation back to the product line that the discount applies to.</p>

<p>I need to extract this data and for the discount lines, provide the key for the product line that it applies to.</p>

<p>Discount Lines (6 and 7) ALWAYS come up after 0 LineType and can be identified by the sequence number. For example, in my table below, the second and third line are discounts for the first line because they have a LineType of 6 and 7 that come after LineType 0.</p>

<p>http://sqlfiddle.com/#!3/80249</p>

<p>I need my results to look like this:</p>

```
<pre><code>Id    LineType    SequenceNumber    Description          ProductLineId
------------------------------------------------------------------------
1     0           1                 Product A            NULL
2     6           2                 Discount on Product A    1
3     7           3                 Loyalty Discount        1
4     0           4                 Product B            NULL
5     0           5                 Product C            NULL
6     6           6                 Discount on Product C    5
</code></pre>
```

<p>I know I can use a <code>LAG</code> function, however the offset is not known, as there may be more discounts. I am currently using a cursor similar to the below which is working, but got awfully slow (the below is the same concept however it sets a Flag against the data, not the ID of the record:</p>

```
<pre><code>OPEN SalesLines
FETCH NEXT FROM SalesLines INTO @SourceKey, @HeaderSourceKey, @IsMarkedDownFlag,
@LineSequenceNumber, @RetailLineTypeId

WHILE @@FETCH_STATUS = 0
BEGIN
```

<p>I'm trying to fill this DataSet with the info that comes from the ARCHIVES_MASTER_TBL when I run a query selecting the products that match the decade and product line but it's giving me the error: "No value given for one or more required parameters." </p>

<pre><code> OleDbConnection dbConn;
 OleDbDataAdapter dbCmdDecade;

 dbConn = new OleDbConnection(connectionString);
 dbConn.Open();

 dbCmdDecade = new OleDbDataAdapter("Select * From ARCHIVE_MASTER_TBL WHERE DECADE_1=" + decade + "AND PRODUCT_LINE=" + productLine, dbConn);
        DataSet ds = new DataSet();
 dbCmdDecade.Fill(ds, "products");
</code></pre>

<p>It worked before adding the "+ "AND PRODUCT_LINE=" + productLine" part but I needed the search to be more specific and only choose the ones that fit both the decade and the product</p>

37356420 | Filling a DataSet from a select statement with mutlipl

<p>The Problem:</p>

<p>I'm in the process of redoing the make system in our legacy project, changing from its present arcane version to CMake. At the moment, I've got CMake treating the whole thing as one large CMake project, but our code base is so large that it's breaking most of the IDEs we throw at it.</p>

<p>We'd like to break it apart, and CMake's find_package "module mode" seems to be ideal for breaking it into "feature-sized" chunks. The prime candidate is a large chunk of the code that only needs to be maintained rarely, and even then its usually by another team. That would allow us to maintain the code, but not continuously recompile it when updating different code. </p>

<p>That said, this chunk of code uses Boost's shared pointer in the API, and while different versions of shared pointer probably will work together, I'd rather not take the chance. So, ideally, the package will be aware of what version of "boost" the system is using, what version of boost was used when the module was compiled, and be able to recompile -- or, at the very least, throw an error or warning in CMake -- if the two don't match.</p>

<p>So ... how does one go about ensuring that versions of common dependencies match in CMake find_package modules? The only thing I can think of is testing the appropriate VERSION variable, but that seems ... bulky. Is there something I'm missing?</p>

<p>Additional Information:</p>

<p>We're using CMake 3.5.1, but we can upgrade to 3.5.2 if that would make a difference. This project is actually a Software Product Line (q.v.), so we are planning to use more modern SPL Software Engineering techniques at some point in the future (yet another reason to choose CMake). The codebase is currently in Redhat Linux, but ideally the technique(s) would be cross-platform.</p>

```
<p>I have a data set which contains customer name and product list given below:</p>

<pre><code>Customer Name   Product Line(L2)
IBM            Linux
IBM            AM-Q
IBM            Linux
Tikona          RHEX
Tikona          BRP
Tikona          RHEX
Tikona          BRP
ICC            AM-Q

</code></pre>

<p>I want to convert them in two different data frames:</p>

<ol>
<li>Data frame contains all the unique product list, which I have done using the code shown
below:</li>
</ol>

<pre><code>import pandas as pd
import numpy as np
Product_Line = 'Product Line (L2)'
read_xlsx = pd.ExcelFile('C:\Python\TEP_Analysis\TEP_Dataset.xlsx')
df = read_xlsx.parse('Sheet1')
unique_list = np.unique(df[Product_Line])
print(unique_list)
</code></pre>
```

<p>I'm working on a new version of a module and I need to create a new table for that, but I'm facing a little issue that is driving me crazy.</p>

<p>Here is my relevant python code:</p>

```
<pre><code>import psycopg2, sys, psycopg2.extras, time

order = 4419

try:
    con = psycopg2.connect(host='localhost', database='DB01', user='odoo', password='******')
cur = con.cursor()
po_lines = 'SELECT pos_order_line.id FROM public.pos_order_line, public.product_template ' \
           'WHERE pos_order_line.product_id = product_template.id AND  pos_order_line.order_id
= %s '\
           'AND (product_template.pos_categ_id != 5 AND product_template.pos_categ_id != 6)' \
           'ORDER BY pos_order_line.id ASC'
po_lines2 = 'SELECT pos_order_line.id, pos_order_line.order_id, product_template.name,
pos_order_line.qty, product_template.pos_categ_id ' \
            'FROM public.pos_order_line, public.product_template  ' \
            'WHERE pos_order_line.product_id = product_template.id AND  pos_order_line.id = %s '
\
            'ORDER BY pos_order_line.id ASC'

cur.execute(po_lines,[order]); fetch_lines = cur.fetchall()
dish = ''; instr = []; kot = 0; dp = 0
print fetch_lines
for line in fetch_lines:
    cur.execute(po_lines2, [line]); pos_lines = cur.fetchone()
    if pos_lines[2].startswith('#'):
        instr.insert(1, pos_lines[2][2:]); kot = 1
    elif pos_lines[2].startswith('----'):
        dp = 1
    else:
        dish = pos_lines[2]
        kot = 0; instr = []
        if dp == 1:
            instr.insert(0, '!SERVIR DEPOIS!'); dp = 0
    if dish != pos_lines[2]:
        print 'Ordem: ', order, ' - Prato:', dish, ' - Instr:', instr, 'qt: ', pos_lines[3],'kot: ', kot, 'dp
status:', dp
```

<p>Apologize in advance if this has been answered already as I couldn't find what I'm looking for.</p>

<p>I would like to have a table of part numbers with attributes such that I can join a part master table to this attribute table to get a list of valid attributes for each part in the part master. The attributes will vary for different part numbers depending on product line. For example, part number ABC might have attribute names OD, ID and Width while part number XYZ might only have Color and Length. The records would look something like this:</p>

<pre><code>ABC, OD, 10.125
ABC, ID, 8.125
ABC, WIDTH, 6.500
XYZ, COLOR, Blue
XYZ, LENGTH, 16.375
</code></pre>

<p>No problem there. What I want to do next is pivot the records so that I can create specification sheets for like products (by product line). The tables by product line would have the attribute name for the field name. For example, part ABC is in the product group "Round Widgets" and part XYZ is under product group "Long Widgets". The query table for round widgets would have fields PN, OD, ID, and WIDTH while the query table for Long Widgets would have fields PN, COLOR and LENGTH. Each of the field names would be the attribute name from the table described above and the part number and attribute values would be the record data.
</p>

<p>For pivoted table fields PN, OD, ID, and WIDTH the data would look like this:</p>

<pre><code>ABC, 10.125, 8.125, 6.500
</code></pre>

<p>I've seen many examples of using PIVOT but they generally hard code the fields needed. The query that would feed this pivot would already be filtered by product group so that each part number in the query should have the same number of fields to pivot.</p>

<p>Thanks in advance for any help...</p>

        echo "&lt;td align='middle'&gt;&lt;b&gt;No&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Retailer Country&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Method Type&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Type&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Product Line&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Product Type&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Year&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Quarter&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Revenue&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Quantity&lt;/b&gt;&lt;/td&gt;";
        echo "&lt;td align='middle'&gt;&lt;b&gt;Gross Margin&lt;/b&gt;&lt;/td&gt;";
    echo "&lt;/tr&gt;";
    $series = 1;
        while($HData=mysql_fetch_array($query))
        {
```

<p>When I import a Sales Order, the resulting Quotation displays the wrong product. Here is the process I followed</p>

<p>Import a new customer with the following csv file which works as expected:</p>

<pre><code>id,property_account_payable_id/id,property_account_receivable_id/id,
notify_email,active,company_id/id,company_type,name
TestCustomer,__export__.account_account_15,__export__.account_account_7,All Messages,
TRUE,base.main_company,Company,Test Customer
</code></pre>

<p>Import a new product, which works as expected:</p>

<pre><code>id,active,description,categ_id/id,name,price,type,uom_po_id/id,uom_id/id,
list_price,state
ABCDEF123456,TRUE,ABCDEF123456 Description,product.product_category_all,ABCDEF123456
Name,123,consu,product.product_uom_unit,product.product_uom_unit,453.67,
</code></pre>

<p>Import a new sales order, which does NOT works as expected:</p>

<pre><code>id,partner_id/id,order_line/product_id/id,order_line/product_uom_qty
SalesOrder123456,TestCustomer,ABCDEF123456,1
</code></pre>

<p>Here is the export of the result of importing the sales order csv above:</p>

<pre><code>"id","partner_id/id","order_line/product_id/id","order_line/product_uom_qty"
"SalesOrder123456","TestCustomer","__export__.product_product_13639","1.0"
</code></pre>

<p>If I go into Settings > Sequences & Identifiers > External Identifiers and search for "13639", I get a result of a completely different product which was imported earlier.</p>

<p>Anybody have any idea what is going on here? This seems like a bug in the import process.
</p>

<p>I have a query with a list: "Product Line" and "Segment"</p>

<p>I created a form with a combobox with the "Product Line" and a listbox with "Segment". This is working fine because the "segment" values change depending on what value is selected in the "Product line".</p>

<p>FYI, this the SQL code for row source : </p>

```
<pre><code>SELECT [Accessory List (2)].Segment
FROM [Accessory List (2)]
GROUP BY [Accessory List (2)].Segment, [Accessory List (2)].Name
HAVING ((([Accessory List (2)].Name)=[Forms]![Form1]![Combo0]));
</code></pre>
```

<p>What I need: I would like to have a report with buttons for every product line (5 buttons) instead of a combobox with all the product line values. Whenever I click on a button, it triggers the listbox values.</p>

<p>FYI, I am not doing VBA, I rather do Macro Builder or expression builder.
I assume I have to do the same I did above, but I have to create an event on click for the button, so that the SQL query reads the button as a value. (or maybe I am completely wrong)</p>

<p>please share with me your thoughts and suggestions.</p>

<p>thanks for your help.</p>

38008463 access report: button triggers listbox

<p>When I run the below code I get a run-time error '91': Object variable or With block variable not set. It highlights the coding underneath the number for in the set rng function, Anyone know what I need to do to the code for it not to error out?</p>

```
<pre><code>' Global and Public Variables
Dim i As Integer
Dim FilterProducts() As String

'Option Explicit

Private Sub btnOK_Click()

Application.ScreenUpdating = False

' Declare variables:
Dim rng As Range
Dim index As Integer
Dim totalLocations As Integer
totalLocations = 0

' Check to see if at least one Product is selected:
If ListBox2.ListCount = 0 Then

    MsgBox "Please select at least one product line from the list!", vbCritical, "Error"

Else

    ' Filter out the pivot table based on the selections.

    ' 1) Find out the size remaining in ListBox1, and assign that to the size of the array.
    ReDim FilterProducts(ListBox1.ListCount)

    ' 2) Fill up the values in the array with the ones remaining in the List Box1.
    For index = 0 To ListBox1.ListCount - 1

        FilterProducts(index) = ListBox1.List(index)

    Next

    ' 3) Filter out the pivot table on wsDbPGPivot to only the values selected:
    FilterChartOnProducts ("Chart 1")
'    FilterChartOnProducts ("Chart 2")
```

<p>Hello Gurus.   </p>

<pre><code>   SELECT

```
    Hardlines_PTI.PTI,
    Hardlines_PTI.[Product Line] as Product_Line,
    TT_Data.CASE_ID as TT_ID,
    TT_Data.STATUS as TT_Status

    FROM Hardlines_PTI CROSS JOIN TT_Data

    WHERE

    TT_Data.SHORT_DESCRIPTION LIKE '%' +Hardlines_PTI.PTI+ '%'

    ORDER BY Hardlines_PTI.PTI
```

</code></pre>

<p>This is the query that am currently using and not getting any output.</p>

<p>Am trying to get the list of PTI from TT_Data table using PTI as a wildcard to figure out if it is present in the TT_Data.Short_Description column.</p>

<p>Please let me know what am doing wrong here.
Thanks in Advance!</p>

38172354 Querying two tables with Wild Card

<p>I Need UniqueName in row level dimension instead of column level.</p>

<pre><code>WITH MEMBER [Measures].[CurrMemID] AS [Product].[Product Line].
CurrentMember.UniqueName
SELECT
    {[Measures].[CurrMemID]} ON COLUMNS,
    {[Product].[Product Line].Members} ON ROWS
FROM [Adventure Works]
</code></pre>

<p>enter image description here</p>

38179550 How to use the UniqueName in Row Level dimension

<p>Could you please help me with this issue?</p>

<p>I have two tables - one lists salesman data (customer account, product line and salesman's name.)</p>

<p>The other table has the customer account, product line brought and various sales value fields such as cost, discount, net value etc.</p>

<p>We can have one customer who has two salesman selling them two different product lines. </p>

<p>I am now trying to create a view that returns salesman, customer account, product line, sales invoice total etc.</p>

<p>This is my query:</p>

<pre><code>SELECT dbo.SMM_IPUSALESMAN.SALESMAN, dbo.IREPORTS_MASTER.
CUSTACCOUNT,
      dbo.IREPORTS_MASTER.PRODUCTLINE, dbo.IREPORTS_MASTER.INVTOTAL
FROM dbo.IREPORTS_MASTER
INNER JOIN dbo.SMM_IPUSALESMAN
  ON dbo.IREPORTS_MASTER.CUSTACCOUNT = dbo.SMM_IPUSALESMAN.CUSTACCOUNT
  AND dbo.IREPORTS_MASTER.PRODUCTLINE = dbo.SMM_IPUSALESMAN.PRODUCTLINE`
</code></pre>

<p>Querying IREPORTS_MASTER returns 6000 rows, but the above query returns more hence me thinking something is wrong. I also will have a scenario where some accounts do not have a SALESMAN assigned (house accounts) so expect them to have no values but still show invoice total.</p>

<p>Could some explain what I am doing wrong with the query? Is the join wrong?
Thanks for any help.</p>

38199619 Joins on two tables with two columns

<p>Currently I am working on a project of detecting defects of product line by comparing the pictures taken by camera. I tried to use OpenCV to extract the edges of the sample picture and the testing picture. However, I am not sure about the next step of comparison. How should I make a conclusion of ok? What measure should I use to compare the pictures? </p>

<p>What I come up in mind is using square difference of every pixels. However, it depends too much on the static environment. I saw the shape distance and Hausdoff distance provided by opencv. Which one should I use? For shape distance, where could I find the logic or methodology behind it? Thanks !!!</p>

<p>I tried to compare two identical pictures (bmp) (just copied from another). The shape distance calculated by shape distance is not zero .... It makes me difficult to set the threshold of shape distance. For Hausdoff distance, the distance calculated is even larger....</p>

<p>Thank you for your kind attention!!</p>

38292382 OpenCV - Shape Distance Method

<p>I am used to writing simple SQL queries and then creating reports in Excel, however in this case the data is too big to model out in Excel but im not sure how to approach an SQL solution. </p>

<p>I have one table (I have full access to this table but not the database, ie I cant add more tables). The table has transactions, lots of em, over about 500 different accounts. What I need to do is create a report that gives an account and then total purchased of each product line by line. In order of biggest account to smallest account.</p>

<p>I can get the list of accounts by sales:</p>

```
<pre><code>SELECT Account, SUM(Sales) AS AccountTO
FROM DataIOS
WHERE (TradeDate between ? AND ?) AND
GROUP BY Account
ORDER BY AccountTO
</code></pre>
```

<p>but unsure how to get 1st account, then product totals, then 2nd account, product totals, etc, for all 500 accounts.</p>

<p>Any help much appreciated!</p>

How to Aggregate sales data for complex sql report

<p>I'm using jQuery DataTables. Recently the client added a product line that has long model numbers. The model numbers are now too long for a single cell. I add the row like this:</p>

<pre><code>oTable.row.add(["Quantity & Model", "(1) PPJN 565.058A/4FA-J33L/42P.M", ""]);
</code></pre>

<p>This renders:</p>

<pre><code><tr role="row" class="even">
<td>Quantity & Model</td>
<td>(1) PPJN 565.058A/4FA-J33L/42P.M</td>
<td></td>
</tr>
</code></pre>

<p>I would like to accomplish something like the following to take advantage of the last empty column:</p>

<pre><code><tr role="row" class="even">
<td>Quantity & Model</td>
<td colspan="2">(1) PPJN 565.058A/4FA-J33L/42P.M</td>
<td style="display:none;"></td>
</tr>
</code></pre>

<p>Maybe there's a way of eliminating the last column all together.</p>

<p>How can I make this happen? This table is not used for sorting or anything like that.</p>

38547757 How to use colspan with DataTables.row.add()

<p>Being new user I managed to make a spider can romper e- commerce site and extract
Title and variations of each product and the output CSV file and a product line but what I will
wish
This is a variation by line, please can someone help me move forward in my project.</p>

<p>I'm looking forward to come to the question but unfortunately I can not find an answer.
</p>

<p>my spider:</p>

```
<pre><code>import scrapy
from w3lib.html import remove_tags
from products_crawler.items import ProductItem

class DemostoreSpider(scrapy.Spider):
   name = "demostore"
   allowed_domains = ["adns-grossiste.fr"]
   start_urls = [
       'http://adns-grossiste.fr/17-produits-recommandes',
]
download_delay = 0.5

def parse(self, response):
   for category_url in response.css('#categories_block_left &gt; div &gt; ul  &gt; li ::attr(href)').
extract():
      yield scrapy.Request(category_url, callback=self.parse_category, meta={'page_number':
'1'})

def parse_category(self, response):
   for product_url in response.css('#center_column &gt; ul &gt; li &gt; div &gt; div.right-block
&gt; h5 &gt; a ::attr(href)').extract():
      yield scrapy.Request(product_url, callback=self.parse_product)

def parse_product(self, response):
   item = ProductItem()
   item['url'] = response.url
   item['title'] = response.css('#center_column &gt; div &gt;   div.primary_block.clearfix &gt;
div.pb-center-column.col-xs-12.col-sm-7.col- md-7.col-lg-7 &gt; h1 ::text').extract_first()
   item['Déclinaisons'] = remove_tags(response.css('#d_c_1852 &gt; tbody   &gt;tr.combi_1852.
\31 852_155.\31 852_26.odd &gt; td.tl.sorting_1 &gt; a &gt; span  ::text').extract_first() or '')
```

<p>I'm trying to obtain a loop result for each row in a different table. I need to know which product line, each sales agent, sell in a month.</p>

<p>I've the query that show me how to know the total of product lines. I need only to insert inside it, the "CODAGENT" in the where condition, looping tHrough each agent in the Agents TABLE. So to make an example not in sql language. </p>

<pre><code>-----THIS IS NOT A USEFUL CODE, IT'S ONLY FOR UNDERSTANDING----
For Each Row in Agents TAble Do
Set #CODAGENT = Row 1,2,3,....
Select
-routine for selecting what i need with inside WHERE CODAGENT = #CODAGENT
Next Row
-----THIS IS NOT A USEFUL CODE, IT'S ONLY FOR UNDERSTANDING----
</code></pre>

<p>I need to obtain this result but in separate table for each agent   </p>

<pre><code>   SELECT
TABCATEGORIE.DESCRIZIONE,
TABCATEGORIESTAT.DESCRIZIONE,
LEFT(SUM(TOTNETTORIGA),LEN(SUM(TOTNETTORIGA))-2),
TABGRUPPI.DESCRIZIONE,
ANAGRAFICAAGENTI.CODAGENTE,
ANAGRAFICAAGENTI.DSCAGENTE
FROM dbo.TESTEDOCUMENTI

ORDER BY CODAGENTE DESC
</code></pre>

<p>I'm a novice in VBScript and XML coding.However, getting my head around and trying to understand the concepts from W3 Schools and other online forums.</p>

<p>I want to read/parse an xml file using VBScript,my XML file is not data but xml source code from an application.</p>

<p>Below is the code snippet that I'm using -</p>

<pre><code>Sub LoadXMLFile()

Dim objXML   'for xml document
Dim objNode   'for xml node item
Dim i As Integer
i = 0

Set objXML = CreateObject("Microsoft.XMLDOM")
objXML.Load ("C:\path\test.xml")
objXML.setProperty "SelectionLanguage", "XPath"
Set objNode = objXML.SelectNodes("/report/queries/query/selection/dataItem/text()")
'MsgBox objNode.Text

For i = 0 To (objNode.Length - 1)
NodeVal = objNode(i).NodeValue
MsgBox NodeVal
Next

End Sub
</code></pre>

<p>When I step through the VB code the objNode.Length value always evaluates to 0. Not sure why its not calculating the Length.</p>

<p>Here is the xml that I'm trying to parse -</p>

<pre><code><report xmlns="http://developer.cognos.com/schemas/report/10.0/"
useStyleVersion="10" expressionLocale="en-us">
<modelPath>
/content/package[@name='GO Sales (query)']/model[@name='model']
</modelPath>
<drillBehavior/>
<queries>

<p>I have created a SQL Server 2016 database with a temporal table <code>Product</code>. I would like to update the table from an Access database through a linked table. When attempting to do this, Access reports </p>

<blockquote>
<p>Reserved error (-7776): there is no error message for this error</p>
</blockquote>

<p>The table is defined as:</p>

<pre><code>CREATE TABLE [dbo].[Product]
(
    [Product] [uniqueidentifier] NOT NULL,
    CONSTRAINT PK_Product_Product PRIMARY KEY CLUSTERED (Product),
    [Name] [nchar](50) NOT NULL,
    CONSTRAINT [AK_Product_Name] UNIQUE([Product line], [Name]),
    [Status] [uniqueidentifier] NOT NULL,
    SysStartTime datetime2 GENERATED ALWAYS AS ROW START NOT NULL,
    SysEndTime datetime2 GENERATED ALWAYS AS ROW END NOT NULL,
    PERIOD FOR SYSTEM_TIME (SysStartTime, SysEndTime)
) ON [PRIMARY] WITH
   (
      SYSTEM_VERSIONING = ON (HISTORY_TABLE = dbo.ProductHistory)
)
GO
</code></pre>

<p>The query </p>

<pre><code>UPDATE Product
SET Status = (SELECT [Product status]
              FROM [Product status]
              WHERE [Name] = 'Announced')
WHERE [Name] = 'A300';
</code></pre>

<p>succeeds without error and is shown in the Access table. Updates are correctly reflected in the History table.</p>

<p>I have tried hiding the valid time columns in case their back-end change causes the problem, but with no effect. Both <code>Product</code> and <code>Product status</code> tables contain original data.</p>

<p>I have a method that currently exports the results of a stored procedure to a CSV file. I've been tasked with altering it to export to XLS but I'm having some trouble.</p>

<p>The code:</p>

```
<pre><code>protected void ExportFundingSummaryToExcelSA(Object sender, EventArgs e)
    {
        const string fileName = "METT Dashboard - Funding Summary";
        const string rowFormat = "{0},{1},{2},{3},{4},{5}\n";

        Response.Clear();
        Response.Buffer = true;
        Response.AddHeader("content-disposition", "attachment;filename=" + fileName + ".
csv");
        Response.Charset = "";
        Response.ContentType = "text/csv";

        GetCompanyGroupCode();

        var sb = new StringBuilder();
        sb.AppendFormat(rowFormat, "Sector", "Product Line", "Program Number", "Program
Description","Participating Companies", "Gross");

        var customerId = CurrentUser.Company.Id;

        var  year = 2015;

        // Set Title Row
        Response.Write(year + " Products Lines for: " + CurrentUser.Company.Name + " (" +
customerId + ")\n");

        // Set Generated Date (Report Created on: 9/29/2004 3:33:32 PM)
        Response.Write("Report Created on: " + System.DateTime.Now.ToString() + "\n\n\n");

        var fundingData = GetFundingData();

        if (fundingData != null)
        {
            if (fundingData.Summary != null &amp;&amp; fundingData.Summary.Count &gt; 0)
            {
                var summaries = MoveSetAsidesDown(fundingData.Summary);
```

<p>The input is retrieve from text file. Which contain information of </p>

product ID
product Name
Product Quantity
<p>product Price</p>

<pre><code>1   RAYBAN 1   450.000000
900 KEYBOARD 100 290.000000
78 MINERALWATER 123 345.000000

<p>Please help me. I want to find all possible combinations of feature by considering the constraints of feature model. as given in figure. Is there any formula or tool for general? Please suggest me any automatic method.</p>

<p>Feature Model:</p>

<p><img src="https://i.stack.imgur.com/iuiSW.png" alt="enter image description here"></p>

39249293 Software Product Line Feature Model

<p>I am trying to figure out if there is a way for the server to rewrite the contents of a custom field without user or admin interaction. Can a server to insert a <code>value</code> into a <code>meta_key</code> by itself, with some kind of trigger?</p>

<pre><code>// This is just an example of the type of if/else based on preferences
if(!empty($_POST($user->id, 'romance', true); {
$product_id = 1300;
} else {
$product_id = 0031;
</code></pre>

<p>The specifics of where the data is stored isn't as much of a concern as how a <code>value</code> could be updated. I can add a <code>meta_key = 'free_item'</code> to the subscription product line item order meta with functions.php via <code>wc_add_order_item_meta()</code> and it can be preset with a <code>$product->id</code>. I am wondering if there is a way for that value to be dynamic. </p>

<p>WORKING EXAMPLE</p>

<p>I am using Woocommerce Subscriptions where customers get a weekly renewal. I am wondering if there is a way to include a new free item — based on their preferences (presumably in <code>user_meta</code>) — in each renewal. From their account page, I'd like them to be able to see the item (<code>product_id</code>) and switch it out for something else.</p>

<p>I know how to display product based on queries, I just can figure out how to include it in the cart without a manual "Add to Cart" click.</p>

<p>Can anyone help point me in the right direction?</p>

39299262 Can I preload product to Woocommerce Subscription

<p>I am currently doing a project of spotting fractured or bad products from a stream of product line. I am trying to use Opencv to extract the edges by Canny. Below are the edges attained from a bad product and a sample product respectively.</p>

<h2>BAD</h2>

<p><img src="https://i.stack.imgur.com/q0FgZ.png" alt="Bad"></p>

<h2>GOOD</h2>

<p><img src="https://i.stack.imgur.com/EC2eq.png" alt="Good"></p>

<p>The Edges are quite clear but there are many small regions of meaningless spots (noises) so it seems impossible to directly compare these two photos pixel by pixel. I was thinking if I can keep rotating and shifting the bad product and find the best comparison score such as square difference between pixels. However, with these noises, this method seems to be impossible. </p>

<p>Therefore, I am thinking if there is a way to extract the largest connected regions or split those connected regions into a few pictures? Or, if there exists a better comparison method even under these circumstances?</p>

<p>Thanks a lot!!! </p>

39422585 Image Comparison Method and Noise deduction

<p>I am setting up a shopping feed within <a href="https://www.shopify.com" rel="nofollow"
>Shopify. </p>

<p>I'm using the Amasty app to generate it. There appears to be a problem with the URL. </p>

<p>Because it is a SAAS package, it it hosted at Shopify. All Google info uses the <code>www.shopname.com</code> address, but the XML sheet gets <code>https://shopname.myshopify.com</code>.</p>

<p>This results in errors, because the URLs do not match. </p>

<p>I want to capture the URL and change it in every product line to use the <code>shopname.com</code> address.</p>

<p>How can I achieve that?</p>

39456619 XML feed change url's

<p>I have a table products that contains a snapshot of an entire product line at a current timestamp. </p>

<p>So each day the entire product table is saved in this same table, with the timestamp.</p>

```
<pre><code>product_id  price  inventory_count snapshot
1          22    23            20160915
1          22    20            20160916
</code></pre>
```

<p>I want to query this table, and list all products where the inventory_count changed.</p>

<p>How can I do this?</p>

<p>I'm not sure how I can inner join the table on itself using the snapshot somehow to differentiate them.</p>

39564389 How to perform a query to compare a table against it

<p>I am working on a site built on wordpress, salient theme, using visual composer.</p>

<p>The site is http://kingkongco.com.au/c-cor/about-us/
(sorry if it runs slow, on a server with hundreds of others!)</p>

<p>If you scroll down, you'll see the staff section,9 people each with a read more function.</p>

<p>The problems are:</p>

when the user opens two or more blocks, and then hits one block's 'hide content', it turns back on the 'read more' for all open blocks
Also, when opened, the text styles left-align (YAY!) but when closed, it does not revert back to center-align.

<p>I recommend to inspect the html using firebug (or something similar) as this was built in salient's visual composer, however, here is all relevent code to this situation:</p>

<p>HTML and (each block is identical except for content) the footer funtion:</p>

<p><div class="snippet" data-lang="js" data-hide="false" data-console="true" data-babel="false">
<div class="snippet-code">
<pre class="snippet-code-js lang-js prettyprint-override"><code>(function($) {
  $('.showcontent').click(function() {
    $(this).hide();
    $(this).parent().next('p').show();
    $(this).parent("p").css("text-align", "left");
  })
  $('.hidecontent').click(function() {
    $(this).parent().hide();
    $('.showcontent').show();
    $(this).parent("p").css("text-align", "center");
  })
})(jQuery);</code></pre>
<pre class="snippet-code-html lang-html prettyprint-override"><code><script src="https://ajax.googleapis.com/ajax/libs/jquery/1.12.4/jquery.min.js"></script>

	I'm looking into expanding our product line by allowing dynamic images as a graph api post via facebook. I was looking at making dynamic images (something like: http://mashable.com/2013/04/23/thinglink-facebook/#sceLSDRqmkqQ). Is there a way to make a dynamic image on the facebook wall? I don't know if that makes any sense, but I was just wondering how ThingLink creates those kinds of interactive images when it looks like Graph just allows static images. Thanks!	
39967699		Generate interactive images on Facebook posts
	Is there any way to control key (cursor) flow, like when you press tab on keyboard, the cursor shifts from one input field to another. But when suppose in sales order under product line the cursor is not coming instead it skips this whole section. Is there any way or solution for this? <img src="https://i.stack.imgur.com/i6xcF.png" alt="enter image description here">	
39971344		Odoo 9 Keyboard controls over input fields (one2mar

<p>I'd like to start off with the fact that I'm a SQL beginner with only 5 or 6 hours of experience. I'm learning fast though. </p>

<p>Ultimately I am trying to select the addresses of clients by product line. The first table (arinvch) contains invoices and therefore the addresses of the clients; the second table (aritrsh) contains the individual line items of the invoices of table 1, and the third table (icitemh) contains the product lines of the line items. </p>

<p>I attempted to join tables two and three in a subquery first to extract the product lines, then join that with the first table to get the customer addresses by product line. </p>

<p>Simply put, this is what I tried to do:</p>

```
<pre><code>SELECT
   table1.addressinfo
FROM
   table1
INNER JOIN
   (SELECT * FROM
   table2 INNER JOIN table3
   ON table2.itemnumber = table3.itemnumber
   WHERE table3.type = 'CRM') joinedtable
ON
   table1.customernumber = joinedtable.customernumber;
</code></pre>
```

<p>The exact code:</p>

```
<pre><code>SELECT
  arinvch.ccustno AS [Customer #],
  arinvch.dinvoice AS [Invoice Date],
  arinvch.cbcompany AS [Bill to Company],
  arinvch.cbaddr1 AS [Bill to Address 1],
  arinvch.cbaddr2 AS [Bill to Address 2],
  arinvch.cbcity AS [Bill to City],
  arinvch.cbstate AS [Bill to State],
  arinvch.cbzip AS [Bill to Zip Code],
  arinvch.cbcountry AS [Bill to Country],
  arinvch.cbphone AS [Bill to Phone],
  arinvch.cscompany AS [Ship To Company],
  arinvch.csaddr1 AS [Ship To Address 1],
  arinvch.csaddr2 AS [Ship To Address 2]
```

<p>I'm attempting to perform a lookup in a table I've created using HLOOKUP to find my column, and MATCH to give me the correct row, which should result in the correct value being posted in my cell.</p>

<p>This is largely the case, however, certain values I'm looking up within the HLOOKUP are producing incorrect results. Specifically they're pulling from on column over.</p>

<p>Here's a smaller version of my table.</p>

<pre><code>--------|CHS |DDR |MWD |MTR |RSS |SUS |WRL |WPS |
UAED |3067110 |3067100 |3067112 |3067102 |3067104 |3067118 |3067116 |3067114 |
MOWD |3075110 |3075100 |3075112 |3075102 |3075104 |3075118 |3075116 3075114 |
</code></pre>

<p>My formula is as follows, apologies for the long table references, I'm looking up a table in another file.</p>

<pre><code>=HLOOKUP(S4003,'[UAT_EXT_MatTypes.xlsx]Plant-PL-PrftCntr'!$A$1:$I$72,
MATCH(C4003,'[UAT_EXT_MatTypes.xlsx]Plant-PL-PrftCntr'!$A$1:$A$72,0))
</code></pre>

<p>S4003 and C4003 are the two values I'm using within my destination table to find the appropriate value in my lookup table. S#### refers to a product line (such as WRL or RSS), while C#### refers to a plant.</p>

<p>The issue I'm having is that whenever I pull a WPS product or an MWD tool, it will pull from the SUS and MTR fields respectively. This does not occur with any other values</p>

<p>For context on how these numbers are derived, the first 4 digits are derived from the plant, while the last 3 are derived by product line.</p>

<p>If anyone has any suggestions as to why this isn't working and how I can fix it, or any alternatives, I'd be very thankful.</p>

40179922 HLOOKUP/MATCH combination returning incorrect va

<p>Before posting this question, I spent a whole day reading stuff from machine learning and nlp under tags section on Stackoverflow.</p>

<p>I have an input statement of the following form</p>

<pre><code>"I am looking for an iPhone 6S possibly rose gold with 16 GB memory, what is the best deal that I can get on this"
</code></pre>

<p>Here is what I want from that line</p>

<pre><code>{intent: "discount", brand: "Apple", productLine: "iPhone", model: "6S", color: "rose gold", memory: "16GB"}
</code></pre>

<p>My query could be about phones, laptops, anything and may or may not be specific about a particular model. For example, it could have been "What is the best mobile phone to buy" </p>

<p>Here is what I am planning to do but would love some feedback or suggestions if you guys think there is a better way to do it
Stage 1
Cleaning text, tokenize, remove stop words
Stage 2
Extract category, brand, model,product line from this sentence. I believe I will need a database of some sort that has all this information and I will simply have to do a fuzzy match with the brand name inside the sentence. Not sure how to do this in the most efficient manner. </p>

<p>One approach is to scan the complete database with possibly 1000s of models and then take the sentence and check if the brand word is present or not. I believe this has to be a fuzzy search just in case the person writes i-Ball instead of iBall</p>

<p>Stage 3
Feature extraction such as rose gold and 16 GB memory. Should I use a regex here or are there more sophisticated methods to extract such info. </p>

<p>One approach that I thought of was to extract unigrams, bigrams and trigrams from the input sentence then compare it with the product specification in a fuzzy manner. What about record linkage libraries for this?</p>

<p>Stage 4</p>

<p>So far, I'm just trying to instantiate my kendogrid and passing through values from my view model. I got the following piece of code from Telerik's documentation for vb.net. The thing is, an exception is thrown from .Grid ->
"Type parameter for public overridable overloads function grid(of T as a class) as a gridbuilder (of t) cannot be inferred"</p>

<p>Html.Kendo().Grid().Name("kendogrid")</p>

<p>I'm not sure what this error means and I don't know how to go about fixing it.</p>

<p>View</p>

```
<pre><code>$(document).ready(function () {
    var dataSource = new kendo.data.DataSource({
        transport: {
            read: {
                url: "TestAjax",
                dataType: "json",
                type: "GET",
            },
            update: {
                url: "update",
                dataType: "json",
                type: "POST"
            },
            create: {
                url: "CreateInvoiceRecord",
                dataType: "json",
                type: "GET",
            },
            parameterMap: function (options, operation) {
                console.log(operation);
                console.log(options);
                if (operation !== "read" &amp;&amp; options.models) {
                    return { models: kendo.stringify(options.models) };
                }
            }
        },
        batch: true,
        pageSize: 20,
        schema: {
            model: {
```

<p>Situation: a part of the product line was upgraded/enhanced with new features, resulting in the addition of "XL" to all model names.</p>

<p>Problem: need to redirect old URLs to new URLs, but the new URLs contain the old keywords + "XL", resulting in "too many redirects".</p>

<p>Example:
<code>RewriteRule ^.*(PRODUCT-001).*$ http://www.example.com/PRODUCT-001-XL [L,NC, R=301]</code></p>

<p>How can I specify that I want this exact string to match, and not the rest of the URL?</p>

<p>E.g. "this rule should match PRODUCT-001 but not PRODUCT-001-XL?</p>

40313688 .htaccess redirects - how to handle "nested" strings?

<p>When I try to deploy my project, this exception happens:</p>

<pre><code>Grave: Undeployment failed for context /CRUD_Restful_Pub

<p>Alright so I use excel a lot because of its cross platform functionality and I'm fed up of some of the very long workflows I have to complete for a load of weekly reports I have to do.</p>

<p>I've been experimenting with this for about 2 weeks and I'm not happy with any of it.</p>

<p>I need to input several different reports into a spreadsheet. Except all of the reports the data is in a different order and there is no way to make them all the same format. So what I was hoping to do was to give each product line (theres 170-300 product lines on each report) a numerical value and then have the spreadsheet call the cells from the different pages using its numerical index. Similar to the most basic of tables in C/C++ (the only coding knowledge I have). I have experimented with Vlookup and Address but both cant be used together and address only returns the address of the cell (but there is no way to then get this to read the data out of the cell and then other pieces of information relating to that cell.</p>

<p>If anyone has any ways of helping me out with this then I would be massively appreciative. P.s. To keep this simple all the reports are manually inputted so they all have the same formatting just on different sheets.</p>

Indexing and Calling Cell information in Excel

<p>I have a spring boot (web) application that has an html, css, and Jquery/Javascript.</p>

<p>When the search button is clicked, I send an Ajax request to the server-side (A Java Spring boot Controller that returns the response in json). The response is a list of Objects. It is automatically marshalled to json upon being returned from the Controller.</p>

<pre><code>@Controller
@RequestMapping("/search")
public class IndexController {
 @RequestMapping(value = "/documents", method = RequestMethod.POST, headers = "Content-Type=application/json")
    public @ResponseBody List<CoysDocument> searchDocuments(@RequestBody DocumentVO documentVo) {
        documentVo.resolveDates();
//Other code
}

}
</code></pre>

<p>Next, is my jquery datatables code as obtained from the datatables website. I modified it as needed.</p>

<pre><code>//
    // Pipelining function for DataTables. To be used to the `ajax` option of DataTables
    //
    $.fn.dataTable.pipeline = function (opts) {
        var documentVo = new Object();
        documentVo.groupId = $("#propertyGroup").val();
        documentVo.property = $("#properties").val();
        documentVo.filter = $("#filter").val();
        documentVo.startDateString = $("#startDate").val();
        documentVo.endDateString = $("#endDate").val();

        // Configuration options
        var conf = $.extend({
            pages: 5,   // number of pages to cache
            url: '/search/documents',   // script url
            contentType: "application/json",
            data: JSON.stringify(documentVo),   // function or object with parameters to send to the

```
<p>I made an HTML page with a form containing some options and the values are sent via POST
to a PHP page.</p>

<p>The HTML contains usual form inputs with checkboxes and text types, then I added
checkboxes with treeview by jQuery, but when I click the <em>Submit</em> button, the values
of the treeview checkboxes are not sent with the POST data. Why is that data not being sent
along?</p>

<ol>
<li>How can I get all checkbox values with form data (i.e. in the POST data)?</li>
<li>If the user selects the Parent checkboxes in treeview, how can I make it select all child
checkboxes, and if a fraction of the child checkboxes are selected then parent checkbox will get
square mark?</li>
<li>Can I make the form clear all selected checkboxes (including those in the treeview control) if
the user clicks the <em>Reset</em> form button?</li>
</ol>

<p>Can someone explain what is wrong or how to correct the following:</p>

<pre><code>&lt;head&gt;
  &lt;link href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css"

<p>Full Question: Report for each product, the percentage value of its stock on hand as a percentage of the stock on hand for product line to which it belongs. Order the report by product line and percentage value within product line descending. Show percentages with two decimal places.</p>

<p>Database: http://richardtwatson.com/dm6e/images/general/ClassicModels.png</p>

<p>My attempt...</p>

<pre><code>SELECT P.productCode, ((P.quantityinStock* '100,2') / (SELECT MAX(P.quantityInStock)
FROM Products P)) AS Percent_
FROM Products P
WHERE P.productCode= (SELECT ((COUNT(Q.productLine *100.0))) / (SELECT MAX(Q.productLine))
FROM ProductLines Q
WHERE Q.productLine= P.productCode
ORDER BY Q.productLine DESC)
</code></pre>

<p>i am struggling quite a bit with these correlated subqueries! </p>

40922287 Correlated Sub-Query: "the percentage value of its st

<p>I am using parameter called <code>Region</code>. It is having 3 values; <code>Region L1</code>, <code>Region L2</code> and <code>Region L3</code>.
I want user to select the region and that should trigger the <code>MDX</code> query in <code>SSAS</code>.
Below is the query:</p>

<pre><code>   select non empty

    {([Region].[Region L3].children , [Product Line].[Product Line L2].children)} on rows,

   {[Measures].[Clients], [Measures].[Commission]} on columns
  from [Products]
</code></pre>

<p>So, the report will initially ask to select the region level from the dropdown. If the user selects <code>Region L2</code>, the parameter will take the value of <code>Region L2</code> and the query would be [Region].[Region L2].children.</p>

<p>I tried <code>strtoset()</code> but not sure, how would I use it here.I am not sure if I can do something like <code>[Region].[@Region].children</code></p>

41025888 How do I use parameter in an MDX query?

<p>I'm working on a business' website and I'm got blocks that essentially look like</p>

<pre><code><h2>Product 1</h2>
 Description...

<h2>Product 2</h2>
Description...

...
</code></pre>

<p>and so on. Let's say they have 20 products. Suddenly they roll out a new product line. Is there any way to change the product names and descriptions to make the product names and descriptions dynamic so that they can be read off some external file instead of changing all these hard coded values individually? </p>

41027047 Make blocks of similar text dynamic in HTML

<p>In Paper [A Software Product Line for Static Analyses(2014)], there is an illustration related constructing call graph(Listing7).</p>

<p>In this example, Line14 is related to construct call graph. while i check the src code and API, what i could find is DefaultCHACallGraphDomain.scala which has no implementation of construct call graph.</p>

<p>As my purpose is using OPAL to construct call graph. Is there any demo or documents help me understanding existing CallGraphDomain in OPAL? currently, i can only find some class declaration.</p>

<p>I'll be really appreciated if anyone can give me some suggestions related this topic.</p>

<p>Thanks in advance.</p>

<p>Jiang </p>

41043654 OPAL-Regarding implementing construct call graph in

<p>What I am trying to do is; User would select value of region from the dropdown(Region1, Region2, Region3).
@Region should take that value in the mdx query.
for eg. if user selects Region2, it should look like: [Region].[Region2].children.
The query that I have written shows that there's a syntax error.</p>

```
<pre><code>WITH
 MEMBER [measures].[region] AS
  StrToMember("[Region].[" + @Region + "]").CurrentMember.Name
 MEMBER [measures].[product] AS
  [Product Line].[product Line L2].CurrentMember.Name
SELECT
 NonEmpty
 (
   StrToMember("[Region].[" + @Region + "]").Children
  *
   [Product Line].[Product Line L2].Children
  ,[Measures].[Total Clients]
 ) ON ROWS
,{
  [measures].[region]
  ,[measures].[product]
  ,[Measures].[Total Clients]
 } ON COLUMNS
FROM [EQ Coverage];
</code></pre>
```

41150982 passing parameter in mdx query

<p>My code below will search the table and extract results based on filters that are hard coded. I have set the default dates above 2014 and until current. But what should I do, if I a user passes date ranges and location(Credited Office) dynamically and wants the results the results within those date range and location. In case, if the user doesn't enters any dates, the code should default to specific dates from 2014 to 3012 and show for all regions. </p>

```
<pre><code>SELECT a.[RDT_FileID]
   , a.[Master Policy Number]
   , a.[Work item /Submission no#]
   , a.[Insured Name]
   , a.[Issuing Office]
   , a.[Issuing Underwriter]
   , a.[Product Line]
   , a.[Product Line Subtype]
   , a.[Current Status]
   , a.[Effective Date]
   , a.[Expiry Date]
FROM DB1.dbo.View_Property_Rater_Of_Record a
WHERE a.[Master Policy Number] IS NOT NULL
   AND a.[Current Status] = 'Bound'
   AND a.[RDT_FileID] IS NULL
   AND a.[Product Line Subtype] &lt;&gt; '0102-Marine'
   AND a.[Effective Date] &gt;= '2014-04-01'
</code></pre>
```

41247573 How to use if else in SQL and VBA together

<p>I am trying to pull my SQL Server table into an Excel worksheet. When I use the following VBA code, the current status doesn't filter out to "Bound" accounts. </p>

<p>But when I try not to drop the table like the second VBA code snippet below, then it works. I am using "Drop" since the execution is faster. I am not sure whether I am declaring my Drop table in VBA wrongly in the first code below. Any suggestions/ corrections will be much appreciated. </p>

<pre><code> objMyCmd.CommandText = " IF OBJECT_ID('tempdb..#Step1') IS NOT NULL DROP TABLE #Step1 " & _
                    " SELECT a.[RDT_FileID],a.[Master Policy Number], a.[Work item /Submission no#],a.[Insured Name], a.[Credited Office], " & _
                          " a.[Credited Underwriter], a.[Product Line], a.[Product Line Subtype], a.[Current Status], a.[Effective Date], a.[Expiry Date], a.[Premium in USD $] " & _
                          " FROM dbo.View_Property_Rater_Of_Record a " & _
                          " WHERE a.[Master Policy Number] Is Not Null " & _
                          " AND a.[RDT_FileID] is null " & _
                          " AND a.[Product Line Subtype] <> '0102-Marine' " & _
                          " AND a.[Effective Date] >= '2014-04-01' " & _
                          " SELECT * from #Step1 WHERE [Current Status] ='Bound' "
</code></pre>

<p>The following is my second code for which I am not dropping table, but the process slows down drastically. Any idea on what's wrong on my first code snippet?</p>

<pre><code> objMyCmd.CommandText = " SELECT a.[RDT_FileID],a.[Master Policy Number], a.[Work item /Submission no#],a.[Insured Name], a.[Credited Office], " & _
                          " a.[Credited Underwriter], a.[Product Line], a.[Product Line Subtype], a.[Current Status], a.[Effective Date], a.[Expiry Date], a.[Premium in USD $] " & _
                          " FROM dbo.View_Property_Rater_Of_Record a " & _
                          " WHERE a.[Master Policy Number] Is Not Null " & _
                          " AND a.[RDT_FileID] is null " & _
                          " AND a.[Product Line Subtype] <> '0102-Marine' " & _
                          " AND a.[Effective Date] >= '2014-04-01' " & _
                          " AND a.[Current Status] ='Bound' "
</code></pre>

```
<p>I used this question/answer as a starting point. <a href="http://stackoverflow.
com/questions/25770689/sql-server-nesting-elements-with-for-xml-path">SQL Server : nesting
elements with FOR XML PATH</a></p>

<p>I'm trying to get to this output.</p>

```

<p>I am trying to use IF-ELSE statement in SQL and execute the query in vba. The code below returns the table in excel based on hardcoded filter. But what do I need to, If in case, I need just the results for a specific date range(for example, say for a month) and for a particular location. The location is called as Credited Office in the code. Any help would be much appreciated. </p>

<p>Thanks in advance ! </p>

<pre><code> objMyCmd.CommandText = " SELECT a.[RDT_FileID],a.[Master Policy Number], a.[Work item /Submission no#],a.[Insured Name], a.[Credited Office]," & _
" a.[Credited Underwriter], a.[Product Line], a.[Product Line Subtype], a.[Current Status], a.[Effective Date], a.[Expiry Date], a.[Premium in USD $] " & _
" FROM DB1[![enter image description here][1]][1].dbo.View_Property_Rater_Of_Record a " & _
" WHERE a.[Master Policy Number] Is Not Null " & _
" AND a.[RDT_FileID] is null " & _
" AND a.[Product Line Subtype] <> '0102-Marine' " & _
" AND a.[Effective Date] >= '2014-04-01' " & _
" AND a.[Current Status] ='Bound' "

objMyCmd.CommandType = adCmdText
objMyCmd.Execute
</code></pre>

<p>This is the code, that I tried to search the results for the specific dates </p>

<pre><code> 'Capture the filters that determin the range of the data that reports are based on

Sheets("Main").Activate

If IsEmpty(Range("C10")) Then PED(0) = 42461 Else PED(0) = Range("C10").Value 'Lower bound of Effective Dates, defaults to 4/1/2014
If IsEmpty(Range("D10")) Then PED(1) = 407703 Else PED(1) = Range("D10").Value 'Upper bound of Effective Dates, defaults to 4/1/3014
If Range("D4") = "" Then Reg = "All Regions" Else Reg = Range("D4").Value 'Office, defaults to "All Regions"

' Step 8 - Create #TmpFileFltr incorporating all the data filters to #TmpFile
Sql = "Select * " _
& "into #TmpFileFltr " _
& "from #TmpFile " _
& "where EffectiveDate >= " & PED(0) & " and EffectiveDate <= "

<p>I am trying to pull the sql table to my excel worksheet based on the dates and location entered by the user.</p>

<p>Cell E6 has a data validation dropdown list of locations such as blank space, followed by Boston, Chicago, Houston, New York and LA. The list is defined from values in <code>H8:H19</code>.</p>

<p>The following code actually works fine for the <code>Else</code> part, where the results are filter based on the location selected by the user other than blank space. </p>

<p>But when the cell <code>E6</code> is empty i.e. when no location is selected it should output the data for all the locations. Any suggestions or opinions on this regard would be much appreciated. </p>

<pre><code>If IsEmpty(Range("E6")) Then Reg = Range("H8:H19").Value Else Reg = Range("E6").Value
</code></pre>

<p>My SQL query code that pulls the data to Excel is as follows:</p>

<pre><code>   objMyCmd.CommandText = " SELECT a.[RDT_FileID],a.[Master Policy Number], a.[Work item /Submission no#],a.[Insured Name], a.[Credited Office]," & _
                        " a.[Credited Underwriter], a.[Product Line], a.[Product Line Subtype], a.[Current Status], a.[Effective Date], a.[Expiry Date], a.[Premium in USD $] " & _
                        " FROM DB1.dbo.View_Property_Rater_Of_Record a " & _
                        " WHERE a.[Master Policy Number] Is Not Null " & _
                        " AND a.[RDT_FileID] is null " & _
                        " AND a.[Product Line Subtype] <> '0102-Marine' " & _
                        " AND a.[Effective Date] >= " & PED(0) & " and a.[Effective Date] <= " & PED(1) & " " & _
                        " AND a.[Current Status] ='Bound' " & _
                        " AND a.[Credited Office] = '" & Reg & "'"

</code></pre>
```

<p>and my SQL query is as follows:-</p>

```
<pre><code>         select
              c1.[RDT_FileID],
              C1.[Master Policy Number],
              c1.[Work item /Submission no#],
              c1.[Insured Name],
```

<p>I know that PRD doesn't do any ordering, but rather takes in ordered data through SQL and displays them. This has worked for elements in the Details section but doesn't seem to work for group headers. </p>

<p>Example:
I have a report that displays a list of cars and are grouped by the header 'Product Line'. The groups are sorted in alphabetical order but I would like to have this order reversed. This query successfully sorts the data on the 'Buy Price' column, but this does not sort on the 'Product Line' column like I expected. </p>

<p>Is there a way of reversing the order, so instead of 'Classic Cars' first, it's 'Vintage Cars'?</p>

<p>Thanks in advance!</p>

41769055 Order elements in Pentaho Report Designer in a Grou

<p>I am completely new to SQL Azure, I use an on-premise SQL Server and aware of cloud services like Amazon AWS RDS which host SQL Server in cloud. I understand SQL Azure is built on top of SQL server and hosted in cloud. But is "hosted in cloud" the only difference? But then I get confuse because SQL MSDN pages call out certain topics apply to SQL Azure vs. SQL Server. </p>

Does SQL Azure has versions like SQL 2014, 2016 or is it a totally different SQL-variation product line from Microsoft?
What additional features/benefits does SQL Azure offer(besides those that naturally come from hosting in cloud - scalability, availability, low startup pricing etc)?
What major areas/features SQL Azure differ from SQL Server? Are there any TSQL Syntax variations, SQL Engine optimizations?
When is a SQL Server (let's say, also hosted in cloud, like AWS RDS) is preferred over SQL Azure?

<p>For this discussion, lets say the SQL server is 2014 or 2016 version.</p>

41769288 How does SQL Azure differ from SQL Server?

<p>We are building a Node.js app. As we are practicing Continuous Delivery with Trunk Based Development we would only have one branch and one build to work with.</p>

<p>For several reasons including legal requirements we are expected to deliver a patch version for the currently released version any time we are developing a next feature release. What's more: There are features and/or activities that would not make it to the next feature version. </p>

<p>Obviously any new features have to be excluded from the patch release, any we-will-not-make-the-next-feature-release stuff has to be excluded from the next release. </p>

<p>In order to test (and ship betas) we are building and testing three versions of the product, say 1.0, 1.1 and 1.2.</p>

<p>Exclusion of features is done using feature toggles.</p>

<p>Question: How could I exclude dependencies only valid for next feature release or even later from being put into the <code>node_modules</code> during build?</p>

<p>If it were for two lines I would try something using the optional dependencies of <code>package.json</code>.</p>

<p>Is there any other way to make sure:</p>

dependencies for 1.1 and after are not making it into 1.0
dependencies for 1.2 and after are not making it into 1.0 and 1.1
require(...) does not fail for not existing dependencies (wrapping with feature toggle???)

<p>Is there a way to avoid keeping three <code>package.json</code>'s and pick the "just right" one during build of each version?</p>

41898931 Node.js: Multiple product line builds from one packag

<p>How to add the VAT percentage for each product line (as a new column or between brackets next to the VAT amount) on the PDF invoice in Magento?</p>

42054179 Magento add VAT percentage for each product

<p>Solution: I wasn't able to solve this without going beyond a simple query, so I've resorted to hard-coding the case statements up to the limit of my table's numeric identifier. </p>

<p>I'm looking for help in writing a query to represent an unknown number of records across multiple fields with only one record per Primary Key.</p>

<p>Here's my table design:</p>

<pre><code>[Column Name] | [Data Type] | [Allow Nulls]
----
*ItemRef   nvarchar(48)   Unchecked
*AttributeID   numeric(2, 0)   Unchecked
 AttributeName nvarchar(128)   Unchecked
 AttributeValue nvarchar(3072) Nullable
 AttributeUOM   nvarchar(10)   Nullable
</code></pre>

<p>*EDIT: Here's some sample data:</p>

<pre><code>   Product123 | 1 | Brand | MyBrandName
    Product123 | 2 | Product Line | MyProductLine
    Product123 | 3 | Color | MyColor
    Product456 | 1 | Brand | MySecondBrandName
    Product456 | 2 | Style | MyStyle
</code></pre>

<p>Here's My Desired Query Result:</p>

<pre><code>[ItemRef] | [AttributeName_01] | [AttributeValue_01] | [AttributeName_02] | [AttributeValue_02] | etc...
</code></pre>

<p>At first I thought to use a PIVOT query, but ran across multiple threads on here suggesting I try Aggregate Case statements instead, which works much more efficiently at first glance. </p>

<p>However, I don't know how many attributes a single record gets. So my question is, how can I write the following to better represent an uncertain amount of attributes?</p>

<pre><code>SELECT ItemRef
  , MIN(CASE AttributeID WHEN '1' THEN AttributeName END) AS AttrName01
  , MIN(CASE AttributeID WHEN '1' THEN AttributeValue END) AS AttrValue01
  , MIN(CASE AttributeID WHEN '1' THEN AttributeUOM END) AS AttrUom01

<p>I am retrieving records from mongodb .find() and trying to nest them with d3v4 .stratify(). Unfortunately, I'm getting the error </p>

<blockquote>
  <p>Error: ambiguous: Product Line 1</p>
</blockquote>

<p>I'm presuming I'm misunderstanding the API documentation. </p>

<p>While the problem seems close to this post, I don't think it's quite the same. However, the result I'm trying to get to IS something like this.</p>

<p>Can someone help me understand how to use .stratify() properly? Or suggest an easier way to do this? </p>

<p>My result set (<code>mongodb_data</code>) is not large (maybe ~2500 products). </p>

<p>My flat <code>mongodb_data</code> looks like this,</p>

<pre><code>[
  {
   "name": "Product Line 1",
   "reference": "product 1.A identifier"
  },
  {
   "name": "Product Line 1",
   "reference": "product 1.B identifier"
  },
  {
   "name": "Product Line 2",
   "reference": "product 2.A identifier"
  },
  {
   "name": "Product Line 2",
   "reference": "product 2.B identifier"
  }
];

<p>I'm trying to submit an HTML form that has 3 submit buttons with different names but I can't identify which one was pressed to submit the form.</p>

<p>HTML:</p>

```
<pre><code>&lt;div class="col-md-12"&gt;
  &lt;form id="validation-form" class="form-horizontal form-label-left"

  novalidate="novalidate"
  action="./controller/productlineNewController.php" method="post"&gt;
    &lt;div class="col-md-6"&gt;
      &lt;section class="widget"&gt;
        &lt;div class="body"&gt;
          &lt;fieldset&gt;
            &lt;div class="form-group"&gt;
              &lt;label class="control-label col-md-4" for="pl_name"&gt;Product Line Name
*&lt;/label&gt;
              &lt;div class="col-md-6"&gt;
                &lt;input type="text" id="pl_name" name="pl_name" onBlur="
checkAvailability()"
                class="form-control input-transparent"
                placeholder="Enter Product Line Name" required="required"&gt;
                &lt;span class="help-block" id="availability-status"&gt;&lt;/span&gt;
              &lt;/div&gt;
              &lt;p&gt;&lt;img src="img/small_loading.gif" id="loaderIcon" style="display:
none" /&gt;&lt;/p&gt;
            &lt;/div&gt;
          &lt;/fieldset&gt;
        &lt;/div&gt;
      &lt;/section&gt;
    &lt;/div&gt;
    &lt;div class="col-md-12"&gt;
      &lt;section class="widget"&gt;
        &lt;div class="form-actions"&gt;
          &lt;div class="row"&gt;
            &lt;div class="col-md-10 col-md-offset-2"&gt;
              &lt;button type="submit" name="save" class="btn btn-lg btn-success"
              onclick="needToConfirm = false;"&gt;Save&lt;/button&gt;&amp;nbsp;
              &lt;button type="submit" name="save_new" class="btn btn-lg btn-success"
              onclick="needToConfirm = false;"&gt;Save &amp;amp; New Product Line&lt;
/button&gt;&amp;nbsp;
```

<p>I'm currently testing and gathering PCs' hardware information from the laptops that come from different vendors(Lenovo,Dell,HP...). I have my Linux Mint Live USB for this task.</p>

<p>Right now, I want to get info of product line, product model from the json file generated from </p>

<blockquote>
<p>lshw command</p>
</blockquote>

<p>However, the result comes out in different ways.</p>

<p>For example:
Lenovo's Laptop:</p>

<pre><code>{
"id" : "mint",
"class" : "system",
"claimed" : true,
"handle" : "DMI:000E",
"description" : "Notebook",
"product" : "2353ABU (LENOVO_MT_2353)",
"vendor" : "LENOVO",
"version" : "ThinkPad T430s",
"serial" : "R9YC24W"
}
</code></pre>

<p>product line will be ThinkPad, and product model will be T430s</p>

<p>In Dell:</p>

<pre><code>{
"id" : "mint",
"class" : "system",
"claimed" : true,
"handle" : "DMI:000E",
"description" : "Notebook",
"product" : "Latitude E6400",
"vendor" : "Dell Inc",

<p>I can't seem to figure out how to do this one. Any help will be appreciated.</p>

<p>Basically I am trying to filter out the product line, and product number from varied string.
(Assuming all the product line will come before the product model and model will
always contain numbers)</p>

<pre><code>Latitude E6430 (Latitude E6430)
HP EliteBook 8460p (H3S08US#ABA)
ThinkPad T60
</code></pre>

<p>My expected result:</p>

<pre><code>Product line: Latitude

Model: E6430

Product line: EliteBook

Model: 8460p

Product line: ThinkPad
Model: T60
</code></pre>

<p>Thanks in advanced</p>
42398071 Regex on filtering product line and model number (Py

<p>In C# I'm using Entity Framework and MVC and have:</p>

<pre><code>public class Part

public class FinishedGoodsPart: Part
  public int? ProductLineId { get; set; }

public class CompetitorPart : Part
  public int? ProductLineId { get; set; }

public class OEPart: Part

public class ProductLine
  public virtual ICollection<Part> Parts { get; set; }
</code></pre>

<p>Observe that FinishedGoodsPart and CompetitorPart have a ProductLine, but OEPart does not.</p>

<p>This puts a column called ProductLine_Id in the FinishedGoodsPart and CompetitorPart tables, as I expect and want, but also puts column ProductLine_Id in table Part (which I do not want).</p>

<p>How do I prevent E.F. from adding column Part.ProductLine_Id? Is there a better design?
</p>

<p>The goal is that an instance of the ProductLine model object will have a list of all parts which belong to that product line (whether they are competitor or finished goods parts). But an OEPart is not allowed to have a ProductLine set.</p>

<p>FinishedGoodsPart objects will have a lot of attributes, whereas CompetitorPart will have very few, therefore I don't want to store all part records in a single database table.</p>

42426319 C# Entity Framework Table Per Type adding unwante

<p>I'm trying to filter out information of product line and product model from HP product description.</p>

<p>Examples:</p>

<pre><code>HP EliteDesk 800 G1 SFF (H3S08US#ABA)
HP Pro 3400 Series MT (H3S08US#ABA)
HP EliteBook 8460p (H3S08US#ABA)
</code></pre>

<p>Expected output:</p>

<pre><code>Production line: EliteDesk
Production model: 800 G1

Production line: Pro
Production model: 3400 Series

Production line: EliteBook
Production model: 8460p
</code></pre>

<p>Here is what I have for now.</p>

<pre><code>product_line = re.search('([a-zA-Z]+) ([a-zA-Z]*\d+[a-zA-Z]*)', model).group(1)
product_model = re.search('([a-zA-Z]+) ([a-zA-Z]*\d+[a-zA-Z]*)', model).group(2)
</code></pre>

<p>However, the output gives result of 800,3400 on the first and second example.</p>

<p>Is there any better way to filter out these info? thank you so much all in advanced</p>

42513002 Regex to filter product model (Python)

<p>I have 2 dataframes. The first one (900 lines) contains corrections that have been applied to a deal. The second dataframe (140 000 lines) contains the list of deals with corrected values. What I am trying to do is to put the old value back.</p>

<p>To link the corrected deals to the corrections I have to compare a number of attributes. In the correction dataframe (900 lines) I have the old and the new value for each corrected attribute. But each correction can be corrected on a different attribute, therefore I check every possible corrected attribute (in the correction dataframe) to compare the new value with the old one and check if this attribute was corrected. If it was I put the old value back. I'm precise that a correction can apply on several deals that share the same data in the fields used to identify.</p>

<p>To finish, I create a new column on the Deals dataframe (140 000 lines) where I put a boolean that true when a deals has been uncorrected, false otherwise.</p>

<p>My code right now is quite gross, I wanted to factorize a bit but the iteration process blocked me. It is running but it has to go through 900*140 000 lines. I launched it on a quad core VM with 12Gb RAM and it went through through it in about 1h20min.</p>

<p>How can I improve performance? Is multithreading possible to use in this case ?
Here is shorted version of my code, just imagine that the number of if statements is 10 times bigger.</p>

```
<pre><code>def CreationUniqueid(dataframe,Correction):

#creating new column to mark the rows we un corrected
dataframe['Modified']=0
#getting the link between the corrections and deals
b=0
for index in Correction.index:
    b+=1 #just values to see progression of the program
    c=0
    for index1 in dataframe.index:
        c+=1
        a=0

        print('Handling correction '+str(b)+' and deal '+str(c)) # printing progress
        if (Correction.get_value(index,'BO Branch Code')==dataframe.get_value(index1,'Wings
Branch') and Correction.get_value(index,'Profit Center')==dataframe.get_value(index1,'Profit
Center'))
            print('level 1 success')
```

42701468	I am wondering whether there is a function that will add a "price ex Tax" to a product line in the Woocommerce orders page. At present it shows the price including Tax and the amount of Tax, I was hoping to add in price ex Tax also.	Display price Ex Tax in the woocommerce orders page

<p>I have tried to generate unique name for different cases and set that unique name as a
Suite variable using minimum keywords, but unable to do this,
Can someone help me to get this, Here is my code..</p>

<pre><code>*** Test Cases ***
